Getting Started with SKB

The SKB Course Manager website is designed to help instructors and administrators easily and effectively set up and manage classes, instructors, students, and student data. The SKB website is also the same site where students will complete and manage their work.

You will access the SKB Course Manager and student site at an URL (web address) that is specific to your school. This URL will be provided to you by your McGraw-Hill representative, or in some cases, it may be automatically e-mailed to you from the SKB system along with your username and password. This URL is the log in page for both instructors and students. (Based on the username entered at log in, the SKB program directs the user to the appropriate website—the Course Manager for administrators and instructors, or the student site for students.)

SKB Technical Requirements

Since SKB is 100% online, there are very few actual requirements to run SKB successfully. There are a number of settings and performance optimizations available to help improve the student and instructor experience.

Minimum System Requirements for SKB

- Windows XP, Windows Vista, Windows 7, or Windows 8
 - » IE7–IE10 or Firefox 3.5+
- 512 MB RAM is required, 1GB+ is recommended
- 1GHz+ processor
- Adobe Flash Player v10+ (Flash Player v10.1 is highly recommended)
- Screen resolution of 1024px × 768px or higher
- Hi-speed Internet access

Additionally, an SKB [optimization guide](#) is available for lab and network environments.
