Contents

Visual Walkthrough *vi*
Preface *xv*

CHAPTER 1 AN INTRODUCTION TO ELECTRONICS 1

1.1 Design Process *1*
1.2 Signals *3*
1.3 Voltage Amplifier and its Primary Parameters *8*
1.4 Amplifier Parameters in Terms of Two-port Parameters *13*
1.5 Need for Power Supplies in Electronic Circuits *16*
1.6 Frequency Response of Amplifiers and Bandwidth *22*
1.7 Bode Plots *27*
1.8 Amplifier Transfer Functions *35*
1.9 Mid Frequency Band *41*
1.10 Difference and Operational Amplifiers *44*
1.11 Sensitivity Analysis and Effects of Tolerance *56*
1.12 Some Applications of Op-amps *64*
1.13 Book Organization *67*
Conclusions *68*
Reference *69*
Problems *69*

CHAPTER 2 SEMICONDUCTOR DIODES AND THEIR APPLICATIONS 77

2.1 Ideal Diode *77*
2.2 Semiconductor (Real) Diode *81*
2.3 Analysis of Resistive Circuits with Diodes *89*
2.4 Small-Signal Model of a Forward-biased Diode *96*
2.5 Rectifiers *103*
2.6 Limiting and Clamping Circuits *114*
2.7 Zener Diodes and Shunt Voltage Regulator *117*
Conclusions *125*
References *126*
Problems *126*

CHAPTER 3 FIELD-EFFECT TRANSISTORS AND AMPLIFIERS 135

3.1 MOSFETs: Structure and Operational Characteristics *136*
3.2 Volt-ampere Relations and Large-signal Models *144*
3.3 DC Analysis of FET Circuits *155*
3.4 Constant Current Sources *167*
3.5 A Conceptual Amplifier and Small-signal Models *174*
3.6 IC Amplifiers with Passive Loads *182*
3.7 IC Amplifiers with Active Loads *192*
3.8 MOSFET Switches *203*
3.9 FET Amplifiers—Discrete Circuits *212*
Conclusions 215
Problems 215

CHAPTER 4 BIPOLAR JUNCTION TRANSISTORS AND AMPLIFIERS 226

4.1 Physical Operation of a BJT Under Active-mode *226*
4.2 Ebers—Moll Equations and Large-signal Models *229*
4.3 Analysis of Transistor Circuits with DC Sources *240*
4.4 An Inverter Circuit *249*
4.5 Small-signal Models of BJTs in the Active Mode *254*
4.6 Basic IC Amplifier Configurations *259*
4.7 Composite Transistor Amplifiers *274*
4.8 Examples of Single-stage Discrete Amplifiers *281*
4.9 Biasing Design in Discrete BJT Amplifiers *289*
4.10 Complete Design Examples *296*
Conclusions 301
Problems 301

CHAPTER 5 DIFFERENCE AMPLIFIERS 315

5.1 Improved Current Mirrors *315*
5.2 Large-signal Analysis of Difference Amplifiers *327*
5.3 Small-signal Analysis of BJT Difference Amplifiers with Passive Loads *337*
5.4 MOSFET Difference Amplifier *348*
5.5 Difference Amplifiers with Active Loads *351*
5.6 Other Non-ideal Parameters of Difference Amplifiers *371*
Conclusions 377
Reference 377
Problems 377

CHAPTER 6 POWER AMPLIFIERS AND OUTPUT STAGES 386

6.1 Classification of Power Amplifiers *387*
6.2 Class-A Power Amplifiers *388*
6.3 Class-B Power Amplifiers *393*
6.4 Class-AB Amplifiers *399*
6.5 MOSFET Configurations *405*
6.6 IC Power Operational Amplifiers *413*
6.7 Power MOSFETs *415*
Conclusions 417
Problems 417

CHAPTER 7 MONOLITHIC IC AMPLIFIERS 421

7.1 Level Shifting Amplifiers *421*
7.2 CMOS Operational Amplifiers *424*
7.3 BJT Operational Amplifiers *430*
7.4 Analysis of 741-type Op-amp *432*
7.5 Current-mode Amplifiers—Operational Transconductance Amplifier *442*
7.6 Current Conveyors and Current-Feedback Amplifiers *448*
Conclusions 456
Problems 456

CHAPTER 8 FEEDBACK AMPLIFIERS 462

8.1 Feedback Concept and Definitions *463*
8.2 Four Basic Feedback Topologies *470*
8.3 Analysis of the Series-shunt Configuration *474*
8.4 Series-series Feedback Amplifier *481*
8.5 Shunt-shunt Configuration *486*
8.6 Shunt-series Configuration *487*
Conclusions 492
Problems 493

CHAPTER 9 FREQUENCY RESPONSES OF AMPLIFIERS 500

9.1 Estimation of ω_L and ω_H using Short Circuit and Open Circuit Time Constants *501*
9.2 Low Frequency Responses of Common-source (CS) and Common-emitter (CE)-amplifiers *504*
9.3 High Frequency Models BJTs and MOSFETs *509*
9.4 High-frequency Responses of CE- and CS-amplifiers *521*
9.5 High Frequency Responses of Voltage Followers *532*

9.6 High Frequency Responses of Current Followers *537*
9.7 Frequency Response of Difference Amplifiers *542*
9.8 Multistage Amplifier Examples *553*
9.9 Frequency Responses of Monolithic IC Amplifiers *565*
Conclusions 574
Problems 575

CHAPTER 10 STABILITY ANALYSIS OF FEEDBACK AMPLIFIERS, FREQUENCY COMPENSATION, AND OSCILLATORS 584

10.1 Stability of Feedback Amplifiers *584*
10.2 Frequency Compensation *593*
10.3 Principle of Sinusoidal Oscillators and Barkhausen Criterion *606*
10.4 Loop-gain Determination *608*
10.5 Active-RC Sinusoidal Oscillators *609*
10.6 Active-LC and Crystal Oscillators *621*
Conclusion 626
Problems 626

CHAPTER 11 ANALOG BUILDING BLOCKS 632

11.1 Instrumentation Amplifiers *633*
11.2 Integrators *638*
11.3 Differentiator *645*
11.4 IC Multipliers—Gilbert Cell *648*
11.5 Precision Rectifiers *654*
11.6 Limiters *658*
11.7 Comparators *665*
11.8 Multivibrators and Waveform Generation *668*
11.9 Digital-to-Analog Converters *675*
11.10 Analog-to-Digital Converters *683*
11.11 Voltage Regulators *688*
11.12 Switched-mode DC/DC Converters *692*
Conclusions 702
Reference 702
Problems 702

CHAPTER 12 FILTERS AND TUNED AMPLIFIERS 711

12.1 Filter Characteristics and Specifications *712*
12.2 First and Second Order Filter Functions *716*
12.3 Approximation Problem *722*
12.4 First-order Filter Networks *735*
12.5 Single-amplifier Second-order Filters *737*

12.6 Double-integrator Loop Filters *744*
12.7 GIC-based Multiple-amplifier Second-order Filters *749*
12.8 Tuned Amplifiers *763*
12.9 Active-SC Filters *772*
Conclusions 778
Reference 778
Problems 778
Answers to Selected Problems ***784***
Index ***792***
