

MATC9 Ch4.4 Key Concepts 3 Mode of a Data Set Worked Example

Example: Flavio took a survey to find the hourly rates paid to his classmates at their part-time jobs. The results are shown. Find the mode of these data.

Rate(\$/h)		
8	9	8
12	11	20
10	8	9
8	9	8

Solution: Tally the frequency for each rate. The mode is the rate that occurs most often.

\$8 occurs 5 times
\$9 occurs 3 times
\$10 occurs once
\$11 occurs once
\$12 occurs once
\$20 occurs once

Therefore, the mode is \$8/h.

Practice:

1. Indira made several practice cross-country flights while working towards a pilot's licence, and noted the price of aviation fuel at each airport that she visited. The results are shown. Find the mode of these data.

Cost(\$/L)		
1.87	1.86	1.86
1.89	1.88	2.25
1.85	1.87	1.88
1.87	1.86	1.86

2. Lars took a survey to find how far each of his classmates lived from the school, rounded to the nearest kilometre. The results are shown. Find the mode of these data.

Distance(km)		
2	3	3
2	3	6
6	5	2
3	1	12

Answers: 1. \$1.86/L. 2. 3 km.
