# TABLE OF CONTENTS

---

|  |            |
|--|------------|
| Preface .....  | xii        |
| <b>1 Setting the Stage for the Study of Dynamics.....</b>                  | <b>1</b>   |
| <b>1.1 A Brief History of Dynamics .....</b>                               | <b>1</b>   |
| Isaac Newton (1643–1727) .....   | 3          |
| Leonhard Euler (1707–1783) .....   | 6          |
| <b>1.2 Fundamental Concepts .....</b>                                      | <b>8</b>   |
| Space and time .....   | 8          |
| Force, mass, and inertia .....   | 8          |
| Particle and rigid body .....  | 9          |
| Vectors and their Cartesian representation .....                           | 10         |
| Useful vector “tips and tricks” .....                                      | 12         |
| Units .....  | 14         |
| <b>1.3 Dynamics and Engineering Design .....</b>                           | <b>25</b>  |
| System modeling .....  | 26         |
| <b>2 Particle Kinematics.....</b>  | <b>29</b>  |
| <b>2.1 Position, Velocity, Acceleration, and Cartesian Coordinates ...</b> | <b>29</b>  |
| Motion tracking along a racetrack .....                                    | 29         |
| Position vector .....  | 31         |
| Trajectory .....   | 31         |
| Velocity vector and speed .....  | 31         |
| Acceleration vector .....  | 33         |
| Cartesian coordinates .....  | 34         |
| <b>2.2 Elementary Motions .....</b>  | <b>55</b>  |
| Driving down a city street .....   | 55         |
| Rectilinear motion relations .....   | 56         |
| Circular motion and angular velocity .....                                 | 59         |
| <b>2.3 Projectile Motion .....</b>   | <b>73</b>  |
| Trajectory of a pumpkin used as a projectile .....                         | 73         |
| Projectile motion .....  | 74         |
| <b>2.4 The Time Derivative of a Vector.....</b>                            | <b>88</b>  |
| Time derivative of a unit vector .....                                     | 91         |
| Time derivative of an arbitrary vector .....                               | 92         |
| <b>2.5 Planar Motion: Normal-Tangential Components .....</b>               | <b>104</b> |
| Car racing and the <i>shape</i> of the track .....                         | 104        |
| Geometry of curves .....   | 105        |
| Normal-tangential components .....   | 106        |

|            |  |            |
|------------|--|------------|
| <b>2.6</b> | <b>Planar Motion: Polar Coordinates .....</b>  | <b>118</b> |
|            | Tracking an airplane   | 118        |
|            | Polar coordinates and position, velocity, and acceleration                           | 118        |
|            | Relation between path and polar components for circular motion                       | 120        |
| <b>2.7</b> | <b>Relative Motion Analysis and Differentiation of Geometrical Constraints .....</b> | <b>135</b> |
|            | Hitting a moving target  | 135        |
|            | Relative motion  | 135        |
|            | Differentiation of geometrical constraints   | 137        |
| <b>2.8</b> | <b>Motion in Three Dimensions .....</b>  | <b>154</b> |
|            | Skydiving acrobatics   | 154        |
|            | Position, velocity, & acceleration in cylindrical coordinates                        | 154        |
|            | Skydiving acrobatics revisited   | 155        |
|            | Position, velocity, & acceleration in spherical coordinates                          | 156        |
|            | Position, velocity, & acceleration in Cartesian coordinates                          | 158        |
| <b>2.9</b> | <b>Chapter Review .....</b>  | <b>168</b> |
| <b>3</b>   | <b>Force and Acceleration Methods for Particles.....</b>                             | <b>183</b> |
| <b>3.1</b> | <b>Rectilinear Motion.....</b>   | <b>183</b> |
|            | A chameleon capturing an insect  | 183        |
|            | Friction   | 185        |
|            | Springs  | 187        |
|            | Inertial reference frames  | 188        |
|            | Governing equations, equations of motion, and degrees of freedom                     | 189        |
|            | A recipe for applying Newton's second law  | 191        |
| <b>3.2</b> | <b>Curvilinear Motion .....</b>  | <b>209</b> |
|            | Newton's second law in 2D and 3D component systems                                   | 209        |
|            | Coriolis component of acceleration   | 222        |
| <b>3.3</b> | <b>Systems of Particles .....</b>  | <b>232</b> |
|            | Engineering materials one atom at a time   | 232        |
|            | Newton's second law for systems of particles   | 235        |
| <b>3.4</b> | <b>Chapter Review .....</b>  | <b>253</b> |
| <b>4</b>   | <b>Energy Methods for Particles .....</b>  | <b>259</b> |
| <b>4.1</b> | <b>Work-Energy Principle for a Particle .....</b>                                    | <b>259</b> |
|            | Relating changes in speed to changes in position                                     | 259        |
|            | Work-energy principle and its relation with $\vec{F} = m\vec{a}$                     | 261        |
|            | Work of a force  | 262        |
| <b>4.2</b> | <b>Conservative Forces and Potential Energy.....</b>                                 | <b>276</b> |
|            | Lifting people up a mountain   | 276        |
|            | Work of a central force  | 277        |
|            | Conservative forces and potential energy   | 279        |
|            | Work-energy principle for any type of force  | 282        |
| <b>4.3</b> | <b>Work-Energy Principle for Systems of Particles .....</b>                          | <b>302</b> |
|            | Determining how far two stacked books slide on a table                               | 302        |
|            | Internal work and work-energy principle for a system                                 | 303        |
|            | Kinetic energy for a system of particles   | 305        |

|  |            |
|--|------------|
| <b>4.4 Power and Efficiency .....</b>  | <b>320</b> |
| Power developed by a force   | 320        |
| Efficiency   | 320        |
| <b>4.5 Chapter Review .....</b>  | <b>327</b> |
| <b>5 Momentum Methods for Particles .....</b>  | <b>333</b> |
| <b>5.1 Momentum and Impulse.....</b>   | <b>333</b> |
| Automobile collision reconstruction  | 333        |
| Impulse-momentum principle   | 334        |
| Conservation of linear momentum  | 337        |
| <b>5.2 Impact.....</b>   | <b>356</b> |
| A collision between two cars   | 356        |
| Impulsive forces   | 357        |
| Coefficient of restitution   | 360        |
| Line of impact   | 362        |
| Direct central impact  | 363        |
| Oblique central impact   | 364        |
| Impact and energy  | 365        |
| Constrained impact   | 365        |
| <b>5.3 Angular Momentum .....</b>  | <b>388</b> |
| A skater's spin  | 388        |
| Definition of angular momentum of a particle   | 389        |
| Angular impulse-momentum principle for a particle  | 389        |
| Angular impulse-momentum for a system of particles                                       | 391        |
| Euler's first and second laws of motion  | 394        |
| <b>5.4 Orbital Mechanics .....</b>   | <b>410</b> |
| Determination of the orbit   | 410        |
| Energy considerations  | 416        |
| <b>5.5 Mass Flows .....</b>  | <b>426</b> |
| Steady flows   | 426        |
| Variable mass flows and propulsion   | 429        |
| <b>5.6 Chapter Review .....</b>  | <b>446</b> |
| <b>6 Planar Rigid Body Kinematics.....</b>   | <b>459</b> |
| <b>6.1 Fundamental Equations, Translation,<br/>and Rotation About a Fixed Axis .....</b> | <b>459</b> |
| Crank, connecting rod, and piston motion   | 459        |
| Qualitative description of rigid body motion   | 460        |
| General motion of a rigid body   | 461        |
| Elementary rigid body motions: translations  | 463        |
| Elementary rigid body motions: rotation about a fixed axis                               | 464        |
| Planar motion in practice  | 465        |
| <b>6.2 Planar Motion: Velocity Analysis.....</b>   | <b>477</b> |
| Vector approach  | 477        |
| Rolling without slip: velocity analysis  | 477        |
| Differentiation of constraints   | 478        |
| Instantaneous center of rotation   | 479        |

|     |   |            |
|-----|---|------------|
| 6.3 | <b>Planar Motion: Acceleration Analysis.....</b>  | <b>498</b> |
|     | Vector approach   | 498        |
|     | Differentiation of constraints  | 498        |
|     | Rolling without slip: acceleration analysis   | 499        |
| 6.4 | <b>Rotating Reference Frames .....</b>  | <b>517</b> |
|     | Motion of an airplane propeller blade   | 517        |
|     | Sliding contacts  | 517        |
|     | The general kinematic equations for the motion of a point relative<br>to a rotating reference frame | 519        |
| 6.5 | <b>Chapter Review .....</b>   | <b>536</b> |
| 7   | <b>Newton-Euler Equations for Planar Rigid Body Motion .....</b>                                    | <b>545</b> |
| 7.1 | <b>Bodies Symmetric with Respect to the Plane of Motion .....</b>                                   | <b>545</b> |
|     | A motorcycle popping a wheelie  | 545        |
|     | Linear momentum: translational equations  | 548        |
|     | Angular momentum: rotational equations  | 548        |
|     | Graphical interpretation of the equations of motion   | 555        |
| 8   | <b>Energy and Momentum Methods for Rigid Bodies.....</b>  | <b>591</b> |
| 8.1 | <b>Work-Energy Principle for Rigid Bodies .....</b>   | <b>591</b> |
|     | Flywheels as energy storage devices   | 591        |
|     | Kinetic energy of rigid bodies in planar motion   | 592        |
|     | Work-energy principle for a rigid body  | 594        |
|     | Work done on rigid bodies   | 595        |
|     | Potential energy and conservation of energy   | 596        |
|     | Work-energy principle for systems   | 598        |
|     | Power   | 598        |
| 8.2 | <b>Momentum Methods for Rigid Bodies .....</b>  | <b>625</b> |
|     | Rigid body modeling in crash reconstructions  | 625        |
|     | Impulse-momentum principle for a rigid body   | 625        |
|     | Angular impulse-momentum principle for a rigid body   | 626        |
| 8.3 | <b>Impact of Rigid Bodies .....</b>   | <b>646</b> |
|     | Collision of two bumper cars  | 646        |
|     | Rigid body impact: basic nomenclature and assumptions   | 648        |
|     | Classification of impacts   | 649        |
|     | Central impact  | 649        |
|     | Eccentric impact  | 651        |
|     | Constrained eccentric impact  | 653        |
| 8.4 | <b>Chapter Review .....</b>   | <b>666</b> |
| 9   | <b>Mechanical Vibrations .....</b>  | <b>673</b> |
| 9.1 | <b>Undamped Free Vibration .....</b>  | <b>673</b> |
|     | Oscillation of a railcar after coupling   | 673        |
|     | Standard form of the harmonic oscillator  | 675        |
|     | Linearizing nonlinear systems   | 676        |
|     | Energy method   | 677        |

|   |            |
|---|------------|
| <b>9.2 Undamped Forced Vibration .....</b>      | <b>692</b> |
| Vibration of an unbalanced motor                | 692        |
| Standard form of the forced harmonic oscillator | 693        |
| <b>9.3 Viscously Damped Vibration .....</b>     | <b>704</b> |
| Viscously damped free vibration                 | 704        |
| Viscously damped forced vibration               | 707        |
| <b>9.4 Chapter Review .....</b>                 | <b>722</b> |
| <b>A Mass Moments of Inertia .....</b>          | <b>731</b> |
| <b>B Angular Momentum of a Rigid Body .....</b> | <b>000</b> |
| <b>C Answers to Selected Problems .....</b>     | <b>000</b> |

Chapter 10, Three-Dimensional Dynamics of Rigid Bodies, is available  
on-line at [www.mhhe.com/pgc](http://www.mhhe.com/pgc).
