

# Table of Contents

Preface xv

## CHAPTER 1

### *Introduction 1*

1.1	Elements of a Communication System	2
1.2	Communication Channels	2
1.2.1	Coaxial Cable	4
1.2.2	Optical Fibers	5
1.2.3	Radio Channels	8
1.3	Analog and Digital Communication Systems	10
1.3.1	Digital Communication Systems	10
1.3.2	Why Digital Transmission?	12
1.4	History of Communications	14
1.4.1	Wireless Communications	18
1.5	Key Themes and Drivers	19
	Final Remarks	21
	Further Readings	21

## CHAPTER 2

### *Review of Signals and Linear Systems 24*

2.1	Basic Signal Concepts	25
2.1.1	Some Useful Basic Signals	27
2.1.2	Energy and Power Signals	33
2.1.3	Logarithmic Power Calculations	35
2.1.4	Some Basic Operations on Signals	35
2.2	Basic System Concepts	38
2.2.1	Classification of Systems	39
2.2.2	Characterization of LTI Systems	42
2.3	Frequency Domain Representation	46
2.4	Fourier Series	47
2.4.1	Trigonometric Fourier Series	48
2.4.2	Parseval's Theorem	52
2.4.3	Convergence of Fourier Series	54
2.5	Fourier Transform	55
2.5.1	Fourier Transforms of Some Common Signals	56
2.5.2	Properties of Fourier Transform	58
2.5.3	Fourier Transforms of Periodic Signals	65
2.6	Time-Bandwidth Product	68
2.7	Transmission of Signals Through LTI Systems	70
2.7.1	Distortionless Transmission	73
2.8	LTI Systems as Frequency Selective Filters	74
2.8.1	Ideal Filters	74
2.8.2	Realizable Approximations to Ideal Filters	78
2.8.3	Analog Filter Design Using MATLAB	80

2.9	Power Spectral Density	84
2.9.1	Time-Average Autocorrelation Function	86
2.9.2	Relationship Between Input and Output Power Spectral Densities	87
2.10	Frequency Response Characteristics of Transmission Media	88
2.10.1	Twisted Wire Pairs	88
2.10.2	Coaxial Cable	92
2.11	Fourier Transforms for Discrete-Time Signals	92
	Final Remarks	96
	Further Readings	97
	Problems	97
	MATLAB Problems	100

## CHAPTER 3

### *Simulation of Communication Systems Using MATLAB/Simulink* 104

3.1	Getting Started in Simulink	105
3.1.1	Solvers	111
3.2	Modeling in Simulink	112
3.2.1	Subsystems	115
3.3	Simulation of Signal and Noise Sources	119
3.3.1	Deterministic Signals	119
3.3.2	Random Signals	121
3.3.3	Modeling of AWGN Channel	125
3.4	Modeling of Communication Systems	128
3.4.1	Time-Domain Modeling	128
3.4.2	Transform-Domain Description	131
3.5	Displaying Signals in Frequency Domain	134
3.6	Using Simulink with MATLAB	136
3.6.1	Running Simulations from MATLAB	137
	Final Remarks	139
	Further Readings	140

## CHAPTER 4

### *Amplitude Modulation* 141

4.1	Low-Pass and Bandpass Signals	143
4.2	Double-Sideband Suppressed-Carrier AM	144
4.2.1	Spectrum of the DSB-SC AM Signal	144
4.2.2	Demodulation of DSB-SC AM Signals	147
	<i>Experiment 4.1 DSB-SC AM Modulation and Demodulation</i>	149
4.3	Conventional Amplitude Modulation	152
4.3.1	Spectrum of the Conventional AM Signal	154
4.3.2	Demodulation of Conventional AM Signal	160
	<i>Experiment 4.2 Conventional AM Modulation and Demodulation</i>	164
4.4	Alternative Representations for BP Signals and Systems	166
4.4.1	Frequency Spectrum of Complex Envelope and Analytic Representations	168
4.4.2	Complex Envelope Representation of BP Systems	170
4.5	Single-Sideband AM	173
4.5.1	Demodulation of SSB-AM Signals	177
	<i>Experiment 4.3 SSB-AM Modulation and Demodulation</i>	179
4.6	Vestigial-Sideband AM	181
4.7	Quadrature Multiplexing	185
4.8	Multiplexing	186
4.8.1	Frequency Division Multiplexing	186

4.9	Frequency Translation and Selection	190
4.9.1	Down-Conversion Mixer	190
4.9.2	Image-Reject Mixers	192
4.10	Communication Receivers	193
4.10.1	Superheterodyne Receivers	194
4.10.2	Direct-Conversion Receivers	196
4.10.3	Low-IF Receiver Architectures	197
	Final Remarks	198
	Further Readings	199
	Problems	199
	MATLAB Problems	201
	APPENDIX 4A: Hilbert Transform	203

## CHAPTER 5

### *Angle Modulation* 206

5.1	FM and PM Signals	206
5.1.1	FM and PM Signals with Sinusoidal Modulating Signal	211
5.1.2	Power in Angle-Modulated Signal	214
5.2	Spectrum of Angle-Modulated Signals	215
5.2.1	Bandwidth of a Sinusoidally Modulated FM Signal	216
5.2.2	Bandwidth of an FM Signal Modulated by Arbitrary Message Signal	219
5.3	Narrowband FM	221
5.4	Demodulation of Angle-Modulated Signals	223
5.4.1	Bandpass Limiter	224
5.4.2	Frequency Discriminator	225
	<i>Experiment 5.1 Simulink Model of an FM System with Ideal Discriminator</i>	226
	<i>Experiment 5.2 FM Demodulation with Balanced Slope Detector</i>	230
5.4.3	Phase-shift Discriminator: Quadrature Detector	231
5.5	Phase-Locked Loop	233
5.5.1	Analog Phase-Locked Loop	234
5.5.2	APLL Linear Model	238
5.5.3	First-Order PLL	239
	<i>Experiment 5.3 First-Order PLL</i>	242
5.5.4	Second-Order PLL	243
	<i>Experiment 5.4 Second-Order PLL</i>	252
5.5.5	Acquisition Process: APLL in the Unlocked State	253
5.6	PLL as FM Demodulator	255
	<i>Experiment 5.5 PLL as FM Demodulator</i>	256
5.7	FM Broadcasting	258
5.7.1	FM Stereo	258
5.8	Analog Television	260
5.8.1	Black-and-White Image	260
5.8.2	Black-and-White Television	262
5.8.3	Color Television	267
5.8.4	Multichannel Television Sound	272
	Final Remarks	273
	Further Readings	274
	Problems	274
	MATLAB Problems	276

## CHAPTER 6

### *Probability and Random Processes* 278

6.1	Probability Concepts	279
-----	----------------------	-----

6.1.1	Relative Frequency	279
6.1.2	Probability Axioms	280
6.1.3	Union Bound	281
6.1.4	Conditional Probability	282
6.2	Random Variables	286
6.2.1	Discrete Random Variables	287
6.2.2	Some Common Discrete Random Variables	288
6.3	Continuous Random Variables	291
6.3.1	Some Common Continuous Random Variables	293
6.3.2	PDFs for Discrete and Mixed Random Variables	298
6.4	Functions of a Random Variable	299
6.4.1	Case I: $g(x)$ Monotonically Increasing or Decreasing	299
6.4.2	Case II: Arbitrary $g(x)$	301
6.5	Statistics of Random Variables	302
6.5.1	Moments and Characteristic Functions	304
6.6	Pairs of Random Variables	307
6.6.1	Marginal Distributions	309
6.6.2	Function of Two Random Variables: Expected Values	310
6.7	Conditional Distributions	313
6.7.1	Conditional Expected Values	316
6.7.2	Independent Random Variables	316
6.8	Pair of Gaussian Random Variables	318
6.8.1	Two Functions of Two Random Variables	321
6.8.2	Central Limit Theorem	323
6.9	Random Processes: Introduction	324
6.9.1	Characterization of a Random Process	327
6.9.2	Stationary Random Processes	330
6.9.3	Wide-Sense Stationary Random Processes	331
6.9.4	Ergodic Random Processes	331
6.9.5	Properties of the Autocorrelation Function	332
6.9.6	Uncorrelated, Orthogonal, and Independent Random Processes	333
6.10	Power Spectrum of a Random Process	333
6.10.1	Wiener-Khinchin Theorem	334
6.10.2	Transmission of Random Signals Through Linear Time-Invariant Systems	336
6.11	Some Important Random Processes	338
6.11.1	Gaussian Random Process	338
6.11.2	White Gaussian Noise	339
6.11.3	Filtered White Gaussian Noise	340
6.12	Narrowband Noise	342
6.12.1	Narrowband White Gaussian Noise	344
6.12.2	Envelope of Sine Wave in Narrowband Noise	348
6.13	Noise in Communication Systems	350
6.13.1	Thermal Noise	350
6.13.2	Available Power	352
6.13.3	Shot Noise	353
6.14	Characterization of System Noise	354
6.14.1	Noise Factor and Noise Figure	355
6.14.2	Effective Input Noise Temperature of a Subsystem	356
6.14.3	Noise Figure of a Cascade of Subsystems	357
6.14.4	Noise Factor of a Lossy Two-Port Network	359
6.15	MATLAB Simulation of Random Processes	360
6.15.1	Generating Arbitrary PDF Random Variables	361
6.15.2	Autocorrelation Function and Spectral Density	362
6.15.3	Samples of White Gaussian Noise	362
	Final Remarks	364
	Further Readings	364

Problems	364
MATLAB Problems	367

## CHAPTER 7

<b>Noise Performance of Analog Communication Systems</b>	<b>371</b>
7.1 Noise Performance of Baseband Systems	372
7.2 Effect of Noise on the Performance of AM Systems	373
7.2.1 Noise Performance of DSB-SC	374
<i>Experiment 7.1 Noise Performance of a DSB-SC AM System</i>	376
7.2.2 Noise Performance of SSB-AM	378
<i>Experiment 7.2 Noise Performance of SSB-AM System</i>	381
7.2.3 Noise Performance of Conventional AM	383
<i>Experiment 7.3 Noise Performance of Conventional AM system</i>	388
7.3 Noise Performance of Angle-Modulation Systems	390
7.3.1 High-CNR Operation	391
7.3.2 FM System Operation: Low-CNR Case	398
<i>Experiment 7.4 Noise Performance of an FM System</i>	403
7.4 Preemphasis and Deemphasis	405
7.5 Comparison of Analog Modulation Systems	407
7.6 Link Design	409
7.6.1 Analog Repeater	410
7.6.2 Performance of Analog Communication System Using Cascade of Repeaters	411
Final Remarks	415
Further Readings	416
Problems	416
MATLAB Problems	418

## CHAPTER 8

<b>Conversion of Analog Signals to Digital Format</b>	<b>422</b>
8.1 Sampling of Low-Pass Signals	423
8.1.1 Nyquist-Shannon Sampling Theorem	425
8.1.2 DFT of the Sampled Sequence	426
8.1.3 Reconstruction of the Analog Signal	427
8.1.4 Practical Sampling Techniques	429
8.2 Aliasing	432
<i>Experiment 8.1 Natural Sampling of an LP Random Signal</i>	436
8.3 Digitization of Analog Signals	438
8.3.1 Quantization	439
8.3.2 Coding of Quantized Samples	440
8.3.3 Errors Introduced by Quantization Process	442
<i>Experiment 8.2 Study of m-bit Quantization Errors</i>	442
8.3.4 Quantization Noise	444
8.4 Pulse Code Modulation	447
8.4.1 Nonuniform Quantization	448
8.5 Differential Pulse Code Modulation	454
8.6 Oversampling in Analog-to-Digital Conversion	457
8.7 Delta Modulation	460
8.7.1 Slope Overload and Granular Noise	462
8.7.2 Adaptive Delta Modulation	463
8.7.3 Continuously Variable Slope Delta Modulation	464
8.7.4 Quantization Noise	465
<i>Experiment 8.3 Delta Modulation</i>	468

8.8	Sigma-Delta Modulation	469
8.8.1	First-Order Sigma-Delta Modulation	470
8.8.2	Noise Performance	471
	<i>Experiment 8.4 Sigma-Delta Modulation</i>	474
8.9	Sampling Theorem for Bandpass Signals	475
	<i>Experiment 8.5 Natural Sampling of a BP Random Signal</i>	481
8.9.1	BP Sampling in Digital Receivers	483
	Final Remarks	484
	Further Readings	484
	Problems	485
	MATLAB Problems	487

## CHAPTER 9

### ***Digital Baseband Modulation*** 489

9.1	Pulse Amplitude Modulation	490
9.2	Binary Line-Coding Techniques	492
9.3	Spectra of Digital Baseband Signals	494
9.3.1	Power Spectral Density of Random Pulse Trains	494
9.3.2	Spectra of Binary Line Codes	498
	<i>Experiment 9.1 Waveforms and Spectra of Several Line-Coding Schemes</i>	504
9.4	Bandwidth of Digital Baseband Signals	506
9.5	Spectral and Power Out-of-Band Plots	507
9.6	Block Line Codes	509
9.6.1	Binary Block Codes	509
9.6.2	Multilevel Block Codes	511
9.7	Scrambling	512
9.7.1	Frame-Synchronous Scrambler	514
9.7.2	SONET Scrambler	515
9.7.3	Self Synchronous Scrambler	516
9.7.4	ATM Scrambler	518
9.8	Pulse Shaping to Improve Spectral Efficiency	519
9.8.1	Sinc Pulse	519
9.8.2	Raised Cosine Pulses	521
	<i>Experiment 9.2 Effect of Channel on Baseband Digital Signals</i>	524
9.9	Estimation of Allowable Bit Rate	526
	Final Remarks	528
	Further Readings	528
	Problems	528
	MATLAB Problems	530

## CHAPTER 10

### ***Detection of Baseband Signals in Noise*** 532

10.1	Binary Signal Detection in AWGN	533
10.1.1	Probability of Bit Error	534
10.2	The Matched Filter	538
10.2.1	Correlation Detectors	542
10.2.2	Performance of Binary Signaling Systems	542
	<i>Experiment 10.1 Binary Antipodal System with Correlation Detector</i>	549
	<i>Experiment 10.2 Binary Antipodal Signaling System with Matched-Filter Detection</i>	550
10.3	Vector Space Concepts	552

10.3.1	Finite Dimensional Vector Spaces	553
10.3.2	Inner-Product Vector Spaces	554
10.3.3	Gram-Schmidt Orthonormalization Procedure	556
10.4	Vector Space Representation of Digital Signals and WGN	560
10.4.1	Vector Space Representation of Waveforms	560
10.4.2	Examples of Signal Constellations	562
10.4.3	Vector Space Representation of WGN	566
10.5	$M$ -ary Signal Detection in AWGN	568
10.5.1	The Maximum a Posteriori Detector	568
10.5.2	The Maximum Likelihood Detector	569
10.5.3	MAP and ML Detector Implementations	570
10.5.4	Decision Regions	572
10.6	Error Performance of ML Detectors	573
10.6.1	Two-Signal Error Probability	573
10.6.2	$M$ -Signal Error Probability	574
10.6.3	Relationship Between Bit and Symbol Error Rates	579
10.7	Performance of $M$ -ary PAM Signals	580
	<i>Experiment 10.3 Noise Performance of 4-PAM Signaling System</i>	583
	Final Remarks	584
	Further Readings	585
	Problems	585
	MATLAB Problems	588

## CHAPTER 11

### ***Digital Information Transmission Using Carrier Modulation*** 592

11.1	Basic Concepts	593
11.1.1	Representation of Digitally Modulated Carrier Signals	595
11.2	Binary Amplitude-Shift Keying	596
11.2.1	Coherent Demodulation of BASK Signals	597
	<i>Experiment 11.1 BASK Simulation and Performance Comparison</i>	602
11.3	Binary Phase-Shift Keying	604
11.3.1	Coherent Demodulation of BPSK Signals	605
	<i>Experiment 11.2 BPSK Simulation and Performance Comparison</i>	608
11.4	Binary Frequency-Shift Keying	611
11.4.1	Orthogonality of BFSK Signals	612
11.4.2	Coherent Demodulation of BFSK Signals	614
	<i>Experiment 11.3 BFSK Simulation and Performance Comparison</i>	616
11.5	Differential Binary Phase-Shift Keying	618
11.6	Noncoherent Demodulation of Binary Digital Carrier Signals	621
11.6.1	Noncoherent Binary ASK	622
11.6.2	Noncoherent Binary FSK	625
11.7	Quadrature Modulation Schemes	629
11.7.1	Demodulation of Quadrature-Modulated Signals	631
11.7.2	QPSK	631
	<i>Experiment 11.4 QPSK Simulation and Performance Comparison</i>	636
11.7.3	Offset QPSK	639
	<i>Experiment 11.5 OQPSK Simulation and Performance Comparison</i>	642
11.7.4	$M$ -ary Phase-Shift Keying	643
11.8	Minimum Shift Keying	646
	<i>Experiment 11.6 MSK Simulation and Performance Comparison</i>	650
11.9	Quadrature Amplitude Modulation	652
	<i>Experiment 11.7 16-QAM System Simulation and Performance Comparison</i>	658

11.10	Spectra of Quadrature Modulated Signals	661
11.10.1	Other Bandwidth Definitions	668
11.11	Comparison of Carrier Modulation Schemes	672
	Final Remarks	673
	Further Readings	673
	Problems	674
	MATLAB Problems	676

## CHAPTER 12

### *Digital Signal Transmission Through Time Dispersive Channels* 679

12.1	Transmission of PAM Signals Through Bandlimited Channels	680
12.1.1	Eye Diagrams	682
12.2	Nyquist's Criterion for Zero ISI	686
12.2.1	RC Pulse Signaling	689
12.3	Transmit and Receive Filters for Bandlimited AWGN Channels	692
12.3.1	Probability of Error Performance	695
12.4	Partial Response (Duobinary) Signaling	696
12.4.1	Detection of Duobinary Signals	699
12.4.2	Probability of Error Performance	702
12.5	Linear Equalizers	703
12.5.1	Zero-Forcing Equalizer	706
12.5.2	Minimum Mean-Square Error Equalizer	711
12.6	Adaptive Equalization	719
12.6.1	Least Mean Square Error Algorithm	720
12.7	Decision Feedback Equalizers	722
12.7.1	Coefficient Optimization	726
12.7.2	Channel Estimation	727
12.8	Performance of Linear and Decision Feedback Equalizers	729
	Final Remarks	734
	Further Readings	734
	Problems	734
	MATLAB Problems	736

## CHAPTER 13

### *Digital Multiplexing and Synchronization* 741

13.1	Digital Multiplexing	742
13.1.1	Plesiochronous Digital Hierarchies	744
13.1.2	Synchronization of PDH Signals	745
13.1.3	M12 Multiplexer: DS2 Frame	745
13.1.4	DS2 OH Bits	746
13.2	SONET	749
13.2.1	Multiplexing of SONET Signals	751
13.2.2	Synchronization of SONET Signals	752
13.3	Carrier Synchronization	754
13.3.1	Raised-Power Loops	754
13.3.2	Costas Loop	756
13.3.3	Effect of Noise on the Carrier Phase Estimation	757
13.3.4	Effect of Noise on the Performance of Carrier Synchronizers	760
13.4	Symbol Synchronization	765
13.4.1	Clock Recovery from NRZ Data	766

13.4.2	PLL for Clock Recovery	769
	<i>Experiment 13.1 SONET OC-48 Clock and Data Using PLL</i>	774
13.5	Frame Synchronization	777
13.5.1	Performance of a Frame Synchronizer	778
13.5.2	Choice of Frame Alignment Word	781
Final Remarks		783
Further Readings		784
Problems		784
MATLAB Problems		786

## CHAPTER 14

### *Information Theory and Compression Techniques* 787

14.1	Basic Concepts of Information Theory	789
14.1.1	Joint and Conditional Entropy	790
14.1.2	Differential Entropy	794
14.1.3	Mutual Information	795
14.2	Source Coding	798
14.2.1	Discrete Memoryless Sources	798
14.2.2	Shannon's Source Coding Theorem	799
14.3	Channel Coding	801
14.3.1	Modeling of Communication Channels	801
14.3.2	Capacity of a Communication Channel	804
14.3.3	Shannon's Channel Capacity Theorem	809
14.3.4	Another Channel Coding Theorem	811
14.4	Capacity of AWGN Channels	812
14.4.1	Shannon's Capacity Theorem for AWGN Channels	812
14.4.2	Capacity of Bandlimited AWGN Channels	814
14.4.3	Implications of Capacity Theorem for Bandlimited AWGN Channels	815
14.4.4	Power-Bandwidth Trade-Offs	817
14.5	Source Coding or Compression Techniques	819
14.5.1	Lossless Compression Techniques	819
14.5.2	Huffman Coding	820
14.5.3	Run-Length Encoding	824
14.5.4	Lempel-Ziv Coding	825
14.6	Image Compression: JPEG	831
14.6.1	Discrete Cosine Transform	834
14.6.2	JPEG Compression Standard	835
14.6.3	Subsampling of Chrominance Components	840
14.7	Digital Video Compression: MPEG	841
14.7.1	MPEG	843
Final Remarks		846
Further Readings		847
Problems		847
MATLAB Problems		849

APPENDIX A: Capacity of AWGN Channel: Alternative Proof	851
---	-----

## CHAPTER 15

### *Channel Coding Techniques* 854

15.1	Block Codes	856
15.1.1	Linear Block Codes	857

15.1.2	Systematic Linear Block Codes	860
15.1.3	Error and Syndrome Vectors	862
15.2	Hard-Decision Decoding of Block Codes	865
15.2.1	Syndrome Decoding of Block Codes	867
15.2.2	Error-Detecting and Error-Correcting Capabilities	867
15.3	Cyclic Codes	872
15.3.1	Encoding of Systematic Cyclic Codes	873
15.3.2	Decoding of Cyclic Codes	874
15.3.3	Important Families of Block Codes	875
15.3.4	Cyclic Redundancy Check Codes	877
15.4	Error Correction Performance of Hard-Decision Decoded Block Codes	878
15.5	Soft-Decision Decoding of Block Codes	881
15.5.1	Soft-Decision Decoding Error Performance	882
15.5.2	Coding Gain	884
15.6	Convolutional Codes	888
15.6.1	Representation of Convolutional Codes	889
15.6.2	Decoding of Convolutional Codes	892
15.6.3	The Viterbi Algorithm	895
15.7	Error Performance of Convolutional Codes	900
15.7.1	Transfer Function of a Convolutional Code	901
15.7.2	Probability of Error for Convolutional Codes	902
15.7.3	Coding Gain	905
15.8	Turbo Codes	907
15.8.1	Turbo Decoding	907
15.8.2	Performance of Turbo Codes	911
15.9	Trellis-Coded Modulation	913
15.9.1	Decoding of TCM Codes	917
	Final Remarks	920
	Problems	921
	MATLAB Problems	923

## **APPENDIX A**

*Mathematical Tables*      **927**

## **APPENDIX B**

*Abbreviations*      **932**

## **APPENDIX C**

*List of Symbols*      **934**
