

# CONTENTS

<i>Preface</i>	xv
<b>1. History of Optics</b>	<b>1.1</b>
<i>References</i> 1.9	
<b>2. What is Light?</b>	<b>2.1</b>
2.1 Introduction 2.1	
2.2 The Corpuscular Model 2.1	
2.3 The Wave Model 2.3	
2.4 The Particle Nature of Radiation 2.5	
2.5 Wave Nature of Matter 2.6	
2.6 The Uncertainty Principle 2.7	
2.7 The Single Slit Diffraction Experiment 2.8	
2.8 The Probabilistic Interpretation of Matter Waves 2.9	
2.9 An Understanding of Interference Experiments 2.10	
2.10 The Polarization of a Photon 2.12	
2.11 The Time-energy Uncertainty Relation 2.14	
<i>Summary</i> 2.14	
<i>Problems</i> 2.15	
<i>Solutions</i> 2.15	
<i>References and Suggested Readings</i> 2.16	
<b>Part 1 Geometrical Optics</b>	
<b>3. Fermat's Principle and Its Applications</b>	<b>3.3</b>
3.1 Introduction 3.3	
3.2 Laws of Reflection and Refraction from Fermat's Principle 3.4	
3.3 Ray Paths in an Inhomogeneous Medium 3.8	
3.4 The Ray Equation and its Solutions 3.12	
3.5 Refraction of Rays at the Interface between an Isotropic Medium and an Anisotropic Medium 3.18	
<i>Summary</i> 3.21	
<i>Problems</i> 3.21	
<i>References and Suggested Readings</i> 3.24	
<b>4. Refraction and Reflection by Spherical Surfaces</b>	<b>4.1</b>
4.1 Introduction 4.1	
4.2 Refraction at a Single Spherical Surface 4.2	
4.3 Reflection by a Single Spherical Surface 4.3	
4.4 The Thin Lens 4.4	
4.5 The Principal Foci and Focal Lengths of a Lens 4.5	
4.6 The Newton Formula 4.7	
4.7 Lateral Magnification 4.7	
4.8 Aplanatic Points of a Sphere 4.8	

4.9	The Cartesian Oval	4.10	
4.10	Geometrical Proof for the Existence of Aplanatic Points	4.10	
4.11	The Sine Condition	4.11	
	<i>Summary</i>	4.13	
	<i>Problems</i>	4.13	
	<i>References and Suggested Readings</i>	4.14	
<b>5.</b>	<b>The Matrix Method in Paraxial Optics</b>		<b>5.1</b>
5.1	Introduction	5.1	
5.2	The Matrix Method	5.2	
5.3	Unit Planes	5.7	
5.4	Nodal Planes	5.8	
5.5	A System of Two Thin Lenses	5.9	
	<i>Summary</i>	5.11	
	<i>Problems</i>	5.11	
	<i>References and Suggested Readings</i>	5.12	
<b>6.</b>	<b>Aberrations</b>		<b>6.1</b>
6.1	Introduction	6.1	
6.2	Chromatic Aberration	6.1	
6.3	Monochromatic Aberrations	6.4	
6.4	Distortion	6.11	
	<i>Summary</i>	6.12	
	<i>Problems</i>	6.12	
	<i>References and Suggested Readings</i>	6.13	
<b>Part 2 Vibrations and Waves</b>			
<b>7.</b>	<b>Simple Harmonic Motion, Forced Vibrations and Origin of Refractive Index</b>		<b>7.3</b>
7.1	Introduction	7.3	
7.2	Simple Harmonic Motion	7.3	
7.3	Damped Simple Harmonic Motion	7.7	
7.4	Forced Vibrations	7.9	
7.5	Origin of Refractive Index	7.11	
7.6	Rayleigh Scattering	7.15	
	<i>Summary</i>	7.16	
	<i>Problems</i>	7.16	
	<i>References and Suggested Readings</i>	7.18	
<b>8.</b>	<b>Fourier Series and Applications</b>		<b>8.1</b>
8.1	Introduction	8.1	
8.2	Transverse Vibrations of a Plucked String	8.3	
8.3	Application of Fourier Series in Forced Vibrations	8.5	
8.4	The Fourier Integral	8.6	
	<i>Summary</i>	8.7	
	<i>Problems</i>	8.8	
	<i>References and Suggested Readings</i>	8.8	
<b>9.</b>	<b>The Dirac Delta Function and Fourier Transforms</b>		<b>9.1</b>
9.1	Introduction	9.1	
9.2	Representations of the Dirac Delta Function	9.1	
9.3	Integral Representation of the Delta Function	9.2	
9.4	Delta Function as a Distribution	9.2	
9.5	Fourier Integral Theorem	9.3	
9.6	The Two and Three Dimensional Fourier Transform	9.5	
	<i>Summary</i>	9.6	
	<i>Problems</i>	9.6	

<b>10. Group Velocity and Pulse Dispersion</b>	<b>10.1</b>
10.1 Introduction 10.1	
10.2 Group Velocity 10.1	
10.3 Group Velocity of a Wave Packet 10.5	
10.4 Self Phase Modulation 10.11	
Summary 10.13	
Problems 10.14	
References and Suggested Readings 10.15	
<b>11. Wave Propagation and the Wave Equation</b>	<b>11.1</b>
11.1 Introduction 11.1	
11.2 Sinusoidal Waves: Concept of Frequency and Wavelength 11.3	
11.3 Types of Waves 11.4	
11.4 Energy Transport in Wave Motion 11.4	
11.5 The One-dimensional Wave Equation 11.5	
11.6 Transverse Vibrations of a Stretched String 11.6	
11.7 Longitudinal Sound Waves in a Solid 11.7	
11.8 Longitudinal Waves in a Gas 11.8	
11.9 The General Solution of the One-dimensional Wave Equation 11.9	
Summary 11.13	
Problems 11.13	
References and Suggested Readings 11.14	
<b>12. Huygens' Principle and Its Applications</b>	<b>12.1</b>
12.1 Introduction 12.1	
12.2 Huygens' Theory 12.1	
12.3 Rectilinear Propagation 12.2	
12.4 Application of Huygens' Principle to Study Refraction and Reflection 12.3	
12.5 Huygens' Principle in Inhomogeneous Media 12.9	
Summary 12.9	
Problems 12.10	
References and Suggested Readings 12.10	
<b>Part 3 Interference</b>	
<b>13. Superposition of Waves</b>	<b>13.3</b>
13.1 Introduction 13.3	
13.2 Stationary Waves on a String 13.3	
13.3 Stationary Waves on a String Whose Ends are Fixed 13.5	
13.4 Stationary Light Waves: Ives and Wiener's Experiments 13.6	
13.5 Superposition of Two Sinusoidal Waves 13.6	
13.6 The Graphical Method for Studying Superposition of Sinusoidal Waves 13.7	
13.7 The Complex Representation 13.9	
Summary 13.9	
Problems 13.9	
References and Suggested Readings 13.10	
<b>14. Two Beam Interference by Division of Wavefront</b>	<b>14.1</b>
14.1 Introduction 14.1	
14.2 Interference Pattern Produced on the Surface of Water 14.2	
14.3 Coherence 14.5	
14.4 Interference of Light Waves 14.6	
14.5 The Interference Pattern 14.7	
14.6 The Intensity Distribution 14.8	
14.7 Fresnel's Two-mirror Arrangement 14.13	
14.8 Fresnel Biprism 14.13	

14.9	Interference with White Light	14.14	
14.10	Displacement of Fringes	14.15	
14.11	The Lloyd's Mirror Arrangement	14.16	
14.12	Phase Change on Reflection	14.16	
	<i>Summary</i>	14.17	
	<i>Problems</i>	14.17	
	<i>References and Suggested Readings</i>	14.18	
<b>15.</b>	<b>Interference by Division of Amplitude</b>		<b>15.1</b>
15.1	Introduction	15.1	
15.2	Interference by a Plane Parallel Film when Illuminated by a Plane Wave	15.2	
15.3	The Cosine Law	15.3	
15.4	Non-reflecting Films	15.4	
15.5	High Reflectivity by Thin Film Deposition	15.7	
15.6	Reflection by a Periodic Structure	15.8	
15.7	Interference by a Plane Parallel Film when Illuminated by a Point Source	15.12	
15.8	Interference by a Film with Two Non-parallel Reflecting Surfaces	15.14	
15.9	Colours of Thin Films	15.17	
15.10	Newton's Rings	15.18	
15.11	The Michelson Interferometer	15.22	
	<i>Summary</i>	15.25	
	<i>Problems</i>	15.25	
	<i>References and Suggested Readings</i>	15.26	
<b>16.</b>	<b>Multiple Beam Interferometry</b>		<b>16.1</b>
16.1	Introduction	16.1	
16.2	Multiple Reflections from a Plane Parallel Film	16.1	
16.3	The Fabry–Perot Etalon	16.3	
16.4	The Fabry–Perot Interferometer	16.5	
16.5	Resolving Power	16.6	
16.6	The Lummer–Gehrcke Plate	16.9	
16.7	Interference Filters	16.10	
	<i>Summary</i>	16.11	
	<i>Problems</i>	16.11	
	<i>References and Suggested Readings</i>	16.11	
<b>17.</b>	<b>Coherence</b>		<b>17.1</b>
17.1	Introduction	17.1	
17.2	The Linewidth	17.3	
17.3	The Spatial Coherence	17.4	
17.4	Michelson Stellar Interferometer	17.6	
17.5	Optical Beats	17.7	
17.6	Coherence Time and Linewidth via Fourier Analysis	17.9	
17.7	Complex Degree of Coherence and Fringe Visibility in Young's Double-hole Experiment	17.10	
17.8	Fourier Transform Spectroscopy	17.12	
	<i>Summary</i>	17.17	
	<i>Problems</i>	17.17	
	<i>References and Suggested Readings</i>	17.18	
<b>Part 4 Diffraction</b>			
<b>18.</b>	<b>Fraunhofer Diffraction I</b>		<b>18.3</b>
18.1	Introduction	18.3	
18.2	Single-slit Diffraction Pattern	18.4	
18.3	Diffraction by a Circular Aperture	18.8	

18.4	Directionality of Laser Beams	18.10	
18.5	Limit of Resolution	18.15	
18.6	Two-slit Fraunhofer Diffraction Pattern	18.18	
18.7	N-slit Fraunhofer Diffraction Pattern	18.20	
18.8	The Diffraction Grating	18.23	
18.9	Oblique Incidence	18.26	
18.10	X-ray Diffraction	18.27	
18.11	The Self-focusing Phenomenon	18.31	
18.12	Optical Media Technology-an Essay	18.33	
	<i>Summary</i>	18.36	
	<i>Problems</i>	18.36	
	<i>References and Suggested Readings</i>	18.38	
<b>19.</b>	<b>Fraunhofer Diffraction II and Fourier Optics</b>		<b>19.1</b>
19.1	Introduction	19.1	
19.2	The Fresnel Diffraction Integral	19.1	
19.3	Uniform Amplitude and Phase Distribution	19.3	
19.4	The Fraunhofer Approximation	19.3	
19.5	Fraunhofer Diffraction by a Long Narrow Slit	19.3	
19.6	Fraunhofer Diffraction by a Rectangular Aperture	19.4	
19.7	Fraunhofer Diffraction by a Circular Aperture	19.5	
19.8	Array of Identical Apertures	19.6	
19.9	Spatial Frequency Filtering	19.7	
19.10	The Fourier Transforming Property of a Thin Lens	19.10	
	<i>Summary</i>	19.12	
	<i>Problems</i>	19.12	
	<i>References and Suggested Readings</i>	19.13	
<b>20.</b>	<b>Fresnel Diffraction</b>		<b>20.1</b>
20.1	Introduction	20.1	
20.2	Fresnel Half-period Zones	20.2	
20.3	The Zone-plate	20.4	
20.4	Fresnel Diffraction—A More Rigorous Approach	20.6	
20.5	Gaussian Beam Propagation	20.8	
20.6	Diffraction at a Straight Edge	20.9	
20.7	Diffraction of a Plane Wave by a Long Narrow Slit and Transition to The Fraunhofer Region	20.13	
	<i>Summary</i>	20.15	
	<i>Problems</i>	20.16	
	<i>References and Suggested Readings</i>	20.17	
<b>21.</b>	<b>Holography</b>		<b>21.1</b>
21.1	Introduction	21.1	
21.2	Theory	21.3	
21.3	Requirements	21.6	
21.4	Some Applications	21.6	
	<i>Summary</i>	21.8	
	<i>Problems</i>	21.9	
	<i>References and Suggested Readings</i>	21.9	
<b>Part 5 Electromagnetic Character of Light</b>			
<b>22.</b>	<b>Polarization and Double Refraction</b>		<b>22.3</b>
22.1	Introduction	22.3	
22.2	Production of Polarized Light	22.6	
22.3	Malus' Law	22.9	

22.4	Superposition of Two Disturbances	22.10	
22.5	The Phenomenon of Double Refraction	22.14	
22.6	Interference of Polarized Light: Quarter Wave Plates and Half Wave Plates	22.18	
22.7	Analysis of Polarized Light	22.20	
22.8	Optical Activity	22.21	
22.9	Change in the SOP (State of Polarization) of a Light Beam Propagating Through an Elliptic Core Single Mode Optical Fiber	22.22	
22.10	Wollaston Prism	22.24	
22.11	Rochon Prism	22.25	
22.12	Plane Wave Propagation in Anisotropic Media	22.26	
22.13	Ray Velocity and Ray Refractive Index	22.30	
22.14	Jones Calculus	22.32	
22.15	Faraday Rotation	22.34	
22.16	Theory of Optical Activity	22.36	
	<i>Summary</i>	22.38	
	<i>Problems</i>	22.39	
	<i>References and Suggested Readings</i>	22.41	
<b>23.</b>	<b>Electromagnetic Waves</b>		<b>23.3</b>
23.1	Maxwell's Equations	23.1	
23.2	Plane Waves in a Dielectric	23.3	
23.3	The Three-dimensional Wave Equation in a Dielectric	23.4	
23.4	The Poynting Vector	23.6	
23.5	Energy Density and Intensity of an Electromagnetic Wave	23.8	
23.6	Radiation Pressure	23.9	
23.7	The Wave Equation in a Conducting Medium	23.10	
23.8	The Continuity Conditions	23.12	
23.9	Physical Significance of Maxwell's Equations	23.13	
	<i>Summary</i>	23.14	
	<i>Problems</i>	23.15	
	<i>References and Suggested Readings</i>	23.16	
<b>24.</b>	<b>Reflection and Refraction of Electromagnetic Waves</b>		<b>24.1</b>
24.1	Introduction	24.1	
24.2	Reflection and Refraction at an Interface of Two Dielectrics	24.1	
24.3	Reflection by a Conducting Medium	24.14	
24.4	Reflectivity of a Dielectric Film	24.15	
	<i>Summary</i>	24.16	
	<i>Problems</i>	24.17	
	<i>References and Suggested Readings</i>	24.18	
<b>Part 6 Photons</b>			
<b>25.</b>	<b>The Particle Nature of Radiation</b>		<b>25.3</b>
25.1	Introduction	25.4	
25.2	The Photoelectric Effect	25.4	
25.3	The Compton Effect	25.7	
25.4	Optical Tweezers	25.10	
25.5	The Photon Mass	25.11	
25.6	Polarization of a Photon	25.11	
25.7	Angular Momentum of a Photon	25.13	
	<i>Summary</i>	25.15	
	<i>Problems</i>	25.16	
	<i>References and Suggested Readings</i>	25.17	

## Part 7 Lasers & Fiber Optics

<b>26. Lasers: An Introduction</b>	<b>26.3</b>
26.1 Introduction 26.3	
26.2 The Fiber Laser 26.9	
26.3 The Ruby Laser 26.11	
26.4 The He–Ne Laser 26.13	
26.5 Optical Resonators 26.14	
26.6 Einstein Coefficients and Optical Amplification 26.19	
26.7 The Line-shape Function 26.25	
26.8 Typical Parameters for a Ruby Laser 26.26	
26.9 Monochromaticity of the Laser Beam 26.27	
26.10 Raman Amplification and Raman Laser 26.28	
<i>Summary</i> 26.31	
<i>Problems</i> 26.32	
<i>References and Suggested Readings</i> 26.33	
<b>27. Fiber Optics I: Basic Concepts and Ray Optics Considerations</b>	<b>27.1</b>
27.1 Introduction 27.2	
27.2 Some Historical Remarks 27.2	
27.3 Total Internal Reflection 27.4	
27.4 The Optical Fiber 27.6	
27.5 Why Glass Fibers? 27.7	
27.6 The Coherent Bundle 27.7	
27.7 The Numerical Aperture 27.8	
27.8 Attenuation in Optical Fibers 27.9	
27.9 Power Law Profile 27.12	
27.10 Pulse Dispersion in Multimode Optical Fibers 27.13	
27.11 Dispersion and Maximum Bit Rates 27.15	
27.12 General Expression for Ray Dispersion Corresponding to a Power Law Profile 27.16	
27.13 Plastic Optical Fibers 27.17	
27.14 Fiber Optic Sensors 27.17	
<i>Problems</i> 27.20	
<i>References and Suggested Readings</i> 27.21	
<b>28. Fiber Optics II: Basic Waveguide Theory and Concept of Modes</b>	<b>28.1</b>
28.1 Introduction 28.1	
28.2 TE Modes of a Symmetric Step Index Planar Waveguide 28.2	
28.3 Physical Understanding of Modes 28.5	
28.4 TM Modes of a Symmetric Step Index Planar Waveguide 28.7	
28.5 TE Modes of a Parabolic Index Planar Waveguide 28.7	
28.6 Waveguide Theory and Quantum Mechanics 28.9	
<i>Problems</i> 28.11	
<i>References and Suggested Readings</i> 28.12	
<b>29. Fiber Optics III: Single Mode Fibers</b>	<b>29.1</b>
29.1 Introduction 29.1	
29.2 Basic Equations 29.1	
29.3 Guided Modes of a Step Index Fiber 29.3	
29.4 Single Mode Fiber 29.6	
29.5 Pulse Dispersion in Single Mode Fibers 29.7	
29.6 Dispersion Compensating Fibers 29.9	
<i>Problems</i> 29.12	
<i>References and Suggested Readings</i> 29.12	

## Part 8 Special Theory of Relativity

<b>30. Special Theory Of Relativity I: Time Dilation And Length Contraction</b>	<b>30.3</b>
30.1 Introduction 30.3	
30.2 Speed of Light For a Moving Observer 30.4	
30.3 Time Dilation 30.4	
30.4 The Mu–Meson Experiment 30.7	
30.5 Length Contraction 30.8	
30.6 Understanding The Mu–Meson Experiment Via Length Contraction 30.9	
30.7 Simultaneity of Two Events 30.9	
30.9 The Twin Paradox 30.10	
30.10 The Michelson–Morley Experiment 30.12	
30.11 Brief Historical Remarks 30.15	
<i>Problems</i> 30.16	
<i>References and Suggested Readings</i> 30.16	
<b>31. Special Theory of Relativity II: The Mass-Energy Relation</b>	<b>31.1</b>
31.1 Introduction 31.1	
31.2 The Mass-Energy Relation 31.1	
31.3 The Doppler Shift 31.4	
<i>Problems</i> 31.5	
<i>References and Suggested Readings</i> 31.6	
<b>32. Special Theory of Relativity III: Lorentz Transformations</b>	<b>32.1</b>
32.1 Introduction 32.1	
32.2 The Lorentz Transformations 32.1	
32.3 Addition Of Velocities 32.3	
32.3 Transformation Laws For The Components of The Momentum Vector 32.5	
32.4 Longitudinal And Transverse Doppler Shift 32.6	
<i>Problems</i> 32.6	
<i>References and Suggested Readings</i> 32.7	
<b>Appendix A: Gamma Functions and Integrals Involving Gaussian Functions</b>	<b>A. 1</b>
<b>Appendix B: Evaluation of the Integral <math>\int_{-\infty}^{\infty} \frac{\sin gx}{x} dx</math></b>	<b>B. 1</b>
<b>Appendix C: The Reflectivity of a Fiber Bragg Grating</b>	<b>C. 1</b>
<b>Appendix D: Diffraction of a Gaussian Beam</b>	<b>D. 1</b>
<b>Appendix E: Simple Derivation of the Diffraction Integral</b>	<b>E. 1</b>
<b>Appendix F: TE and TM Modes in Planar Waveguides</b>	<b>F. 1</b>
<b>Appendix G: Solution For the Parabolic Index Waveguide</b>	<b>G. 1</b>
<b>Appendix H: Invariance of the Wave Equation Under Lorentz Transformation</b>	<b>H. 1</b>
<b>Index</b>	<b>I. 1</b>
