

Contents

<i>Preface</i>	<i>xi</i>
1. Dimensions and Units	I
1.1 Dimensions and Systems of Units	1
1.2 Fundamental Quantities	2
1.3 Derived Quantities	3
1.4 Conversions	8
1.5 Recommendations for Use of Units	10
<i>Exercises</i>	14
<i>References</i>	15
2. Basic Chemical Calculations	16
2.1 Mole, Atomic Mass and Molar Mass	16
2.2 Equivalent Mass	18
2.3 Solids	19
2.4 Liquids and Solutions	23
2.5 Important Physical Properties of Solutions	29
2.6 Gases	33
2.7 Conclusion	45
<i>Exercises</i>	46
<i>References</i>	51
3. Material Balances without Chemical Reaction	52
3.1 Block Diagrams	52
3.2 Process Flow Sheet	53
3.3 Material Balances	58
3.4 Use of Linear Model and Matrix Method in Solving Material Balance Problems	66
3.5 Graphical Solution of Problems	70
3.6 Recycling and Bypassing Operations	75
3.7 Material Balances of Unsteady-State Operations	85
<i>Exercises</i>	94
<i>References</i>	109

4. Material Balances Involving Chemical Reactions	111
4.1 Equations for Chemical Reactions	111
4.2 Material Balances Involving Chemical Reactions	111
4.3 Definitions of Terms	112
4.4 Generalized Approach for Solving Material Balance Problems Involving Chemical Reactions	115
4.5 Linear Model for Material Balance Problems Involving Chemical Reactions	139
4.6 Electrochemical Reactions	143
4.7 Recycling, Parallel and Bypassing Operations	146
4.8 Metallurgical Applications	159
<i>Exercises</i>	161
<i>References</i>	179
5. Energy Balances	182
5.1 Energy and Thermochemistry	182
5.2 Energy Balances	184
5.3 Heat Capacity	187
5.4 Sensible Heat Changes in Gases at Constant Pressure	188
5.5 Sensible Heat Changes in Liquids and Solids	199
5.6 Heat Capacity of Gaseous Mixtures	208
5.7 Heat Capacity of Liquid Mixtures	209
5.8 Latent Heats	211
5.9 Enthalpy Changes for Pure Substances and their Mixtures in Ideal States	231
5.10 Equilibrium Flash Calculations of a Multicomponent System	250
5.11 Enthalpy Changes Accompanying Chemical Reactions	258
5.12 Absolute Enthalpy	263
5.13 Standard Heat of Reaction	267
5.14 Adiabatic Reactions	291
5.15 Thermochemistry of Mixing Processes	295
5.16 Dissolution of Solids	296
5.17 Liquid-Liquid Mixtures	302
5.18 Gas-Liquid System	310
5.19 Heat of Solution by Partial Molar Quantities	313
5.20 Data Sources	323
<i>Exercises</i>	323
<i>References</i>	343
6. Stoichiometry and Unit Operations	346
6.1 Distillation	346
6.2 Absorption and Stripping	355
6.3 Extraction and Leaching	360
6.4 Crystallization	367
6.5 Psychrometry	373

6.6 Drying	395	
6.7 Evaporation	400	
6.8 Less Conventional Operations	405	
<i>Exercises</i>	408	
<i>References</i>	427	
7. Combustion		428
7.1 Fuels	428	
7.2 Calorific Values of Fuels	429	
7.3 Coal	430	
7.4 Liquid Fuels	436	
7.5 Gaseous Fuels	436	
7.6 Air Requirement and Flue Gases	445	
7.7 Combustion Calculations	455	
<i>Exercises</i>	488	
<i>References</i>	498	
8. Stoichiometry and Industrial Problems		499
<i>Exercises</i>	573	
<i>References</i>	605	
9. Stoichiometry and Digital Computation		607
9.1 Application/Justification	607	
9.2 Analog Computation vs Digital Computation	608	
9.3 Use of Programmable Calculators	608	
9.4 Programming Languages	609	
9.5 General Procedure	609	
9.6 Applications of Fortran	610	
9.7 Applications of Spreadsheet Software in Stoichiometry	629	
9.8 Applications of Mathematical Software in Stoichiometry	632	
9.9 Optimization	645	
9.10 Control of Plant Operation with the Help of a Computer	645	
<i>Exercises</i>	646	
<i>References</i>	650	
Appendix I: Conversion Tables		651
Appendix II: List of Elements		657
Appendix III: Critical Constants of Compounds		660
Appendix IV: Steam Tables		670
Appendix V: Standard Enthalpies of Formation and of Combustion of Compounds		695
<i>Index</i>		718
