

Chapter 4

Circuit-Switching Networks

Chapter Figures

(a)

(b)

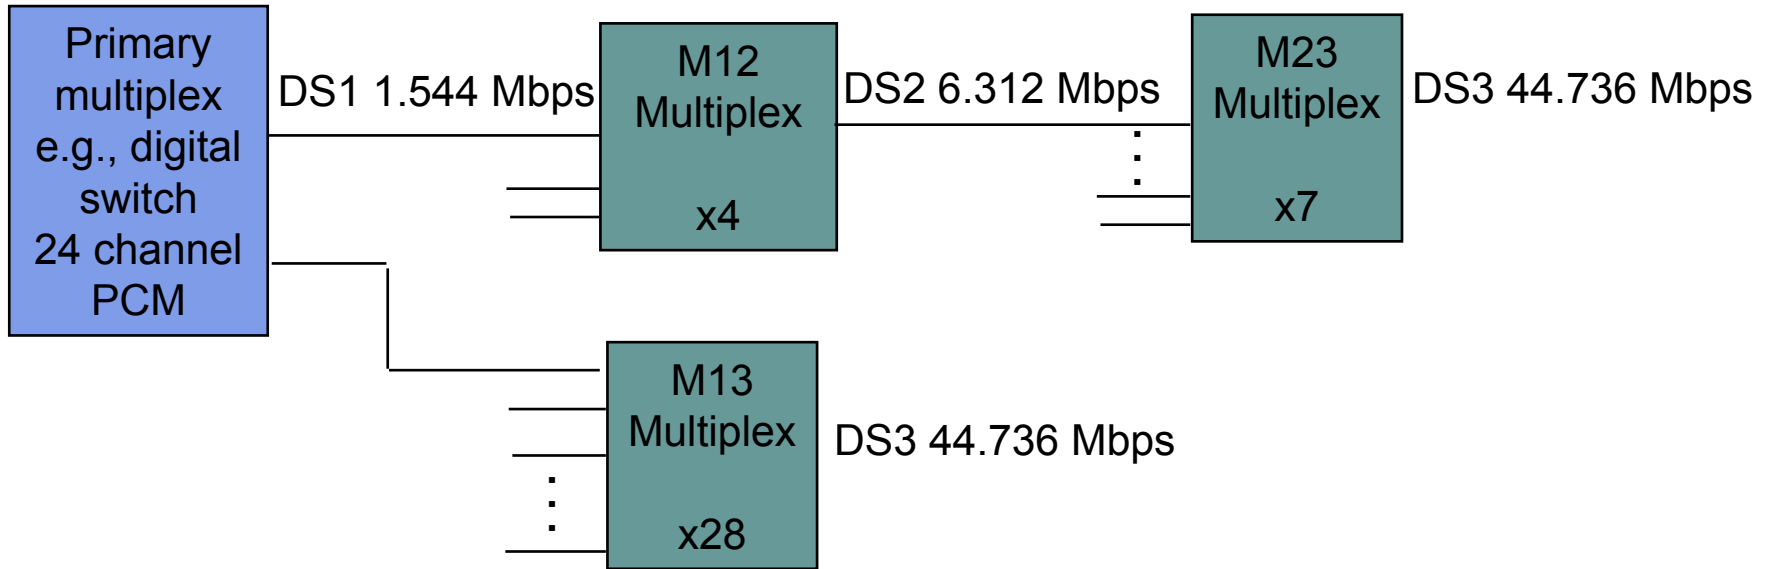

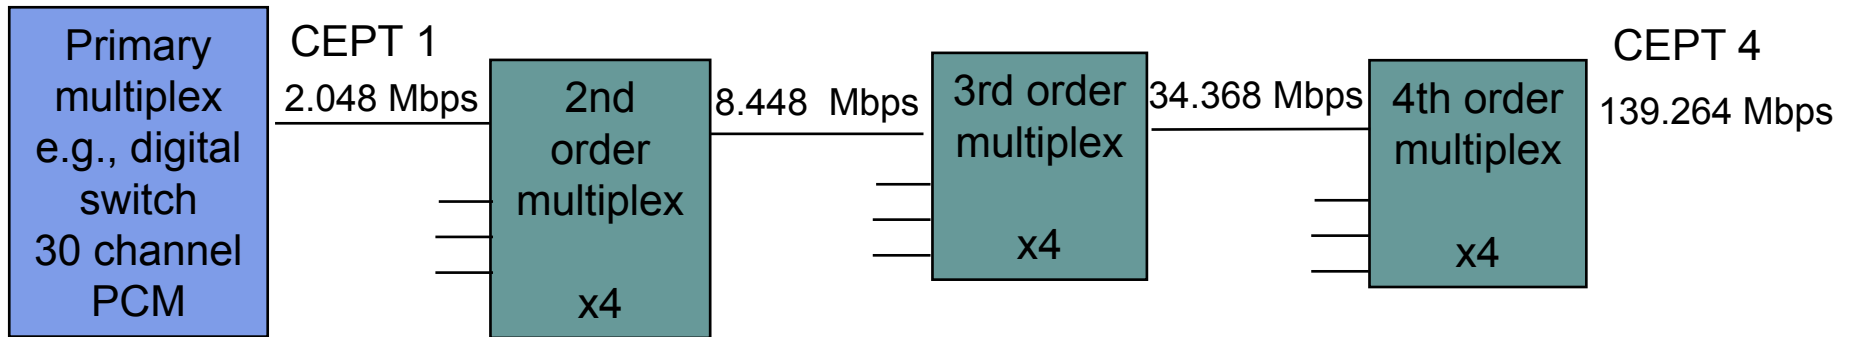

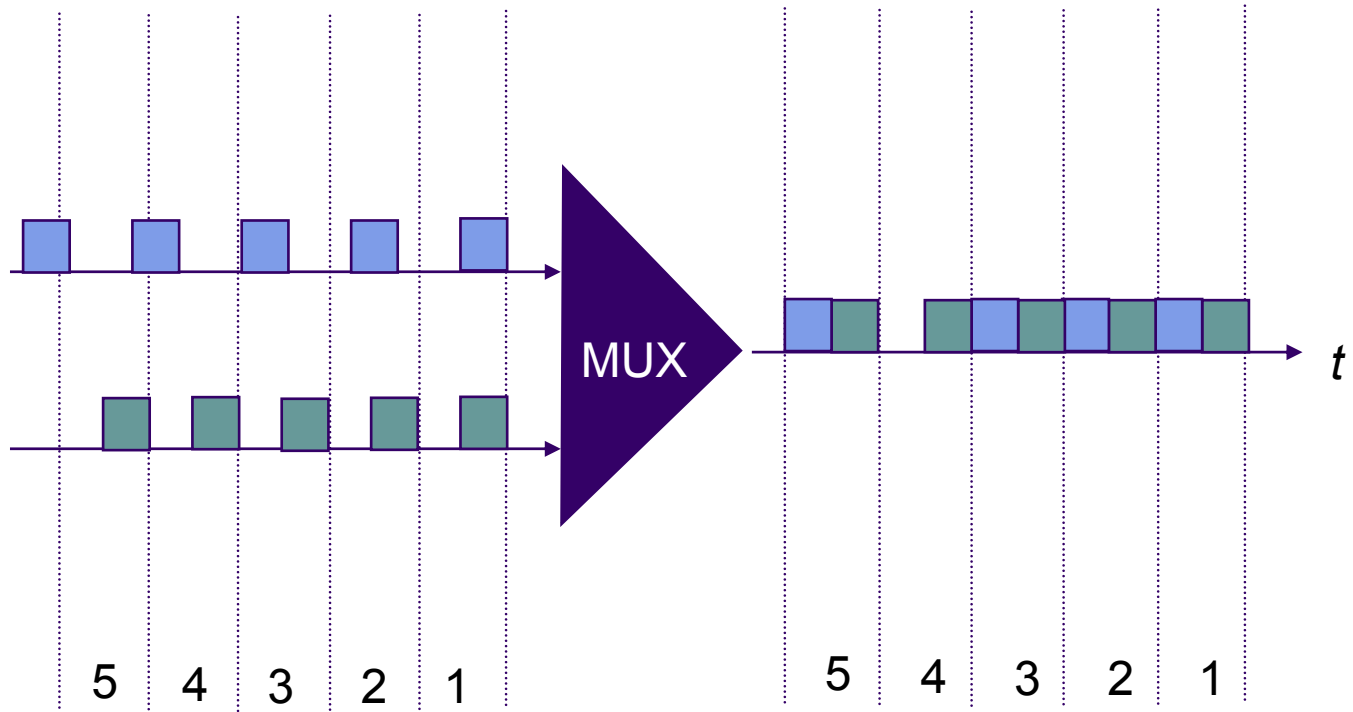

North American digital hierarchy

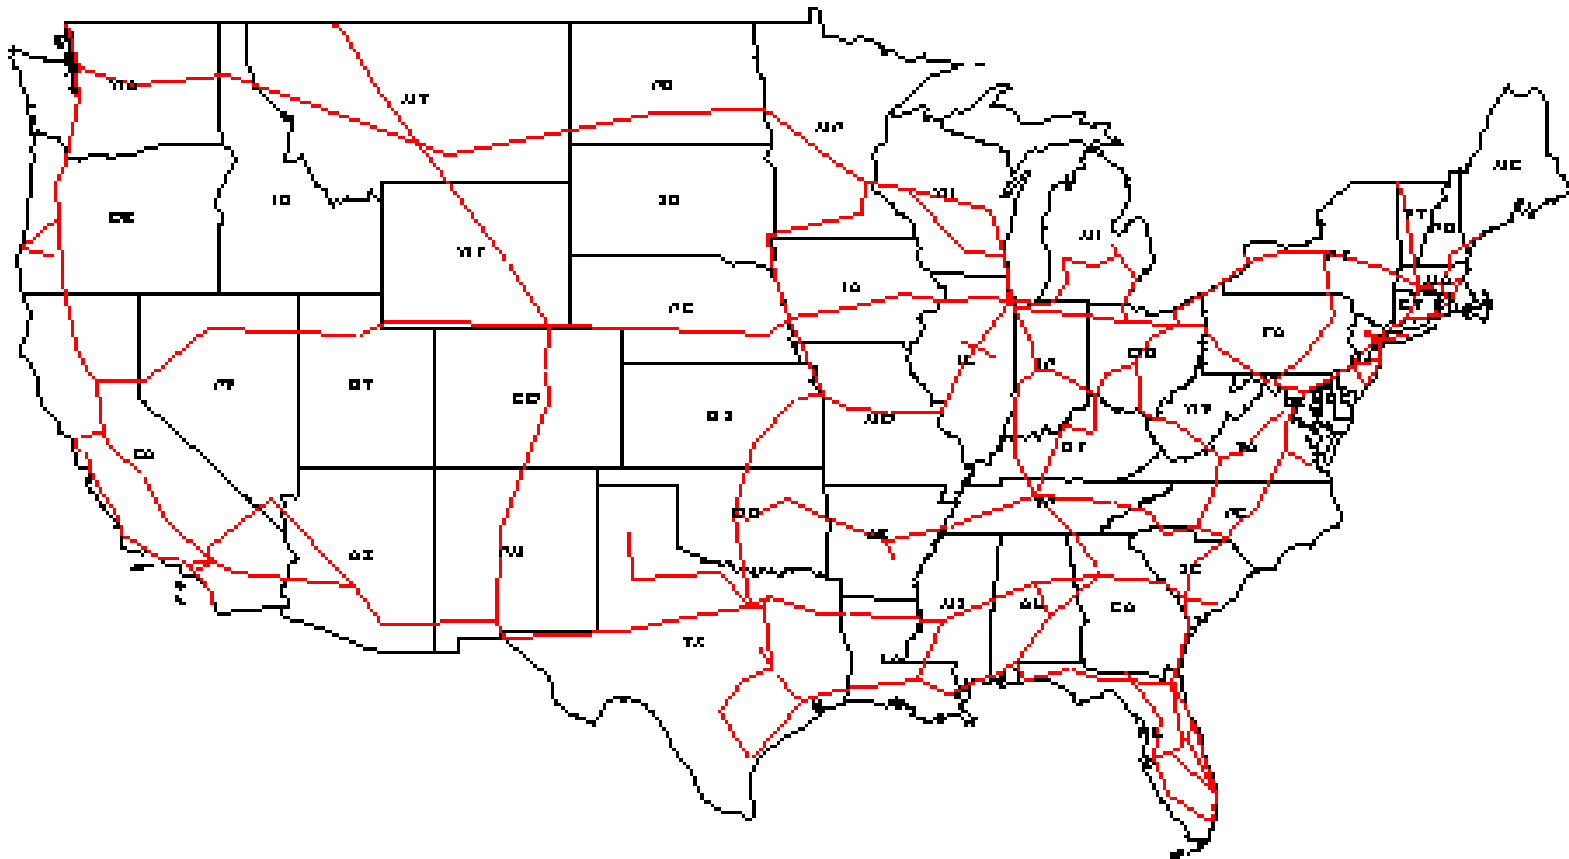

European digital hierarchy

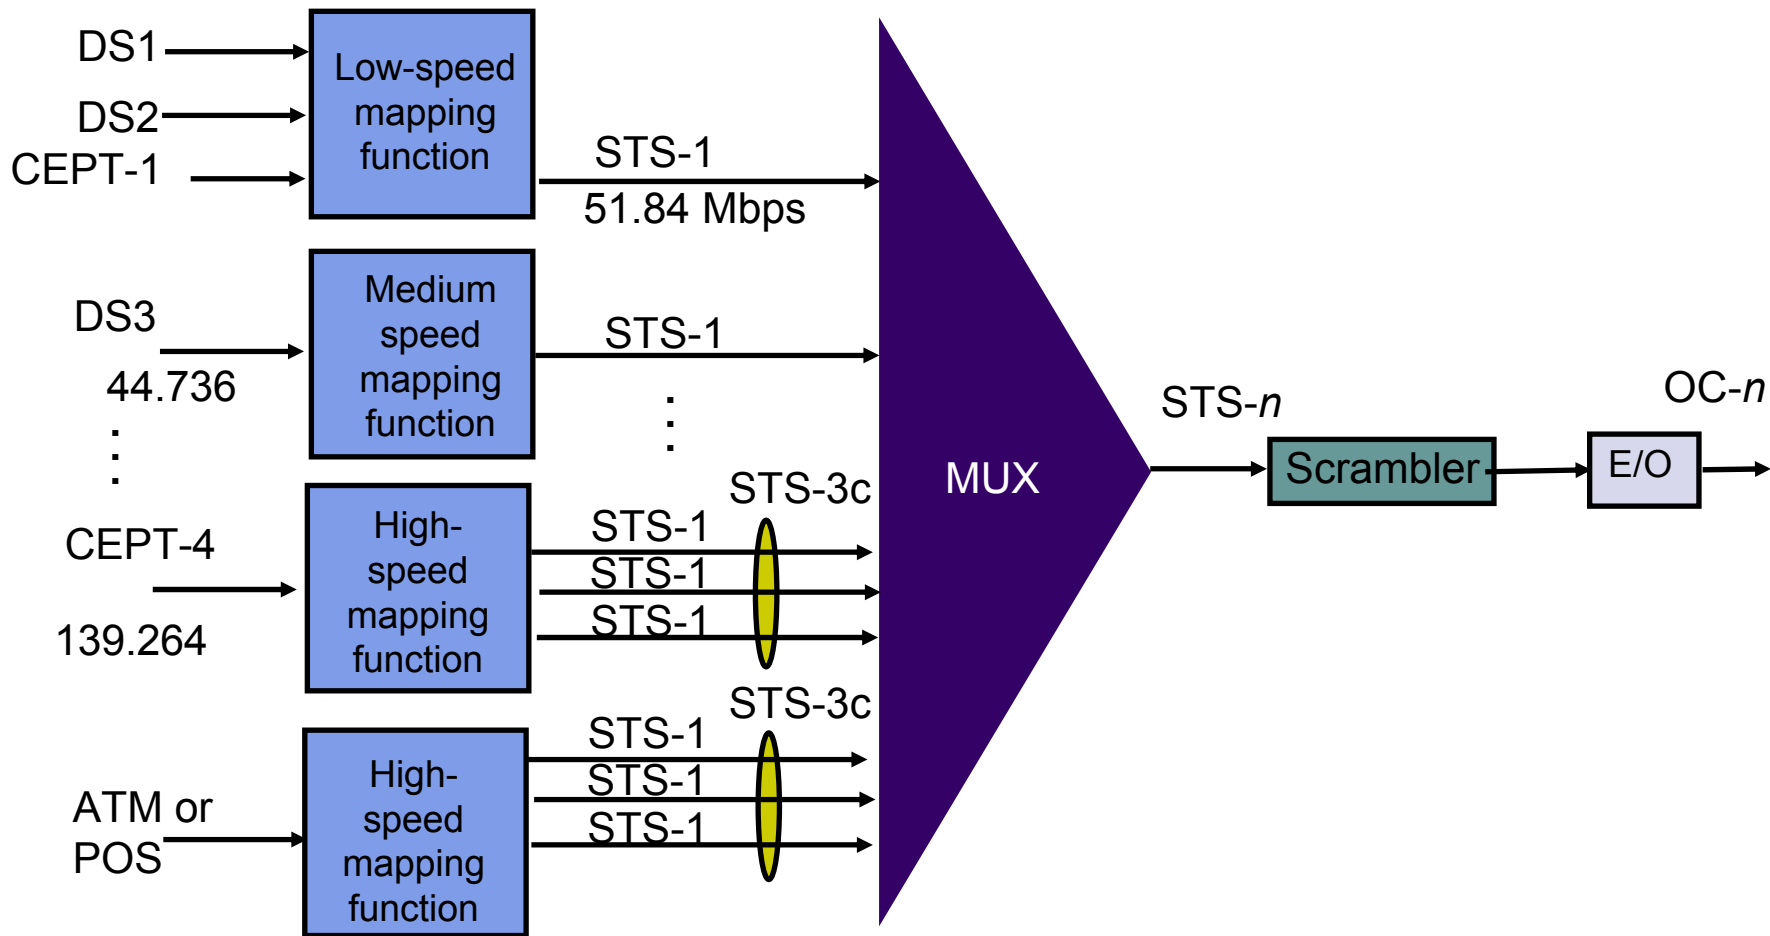

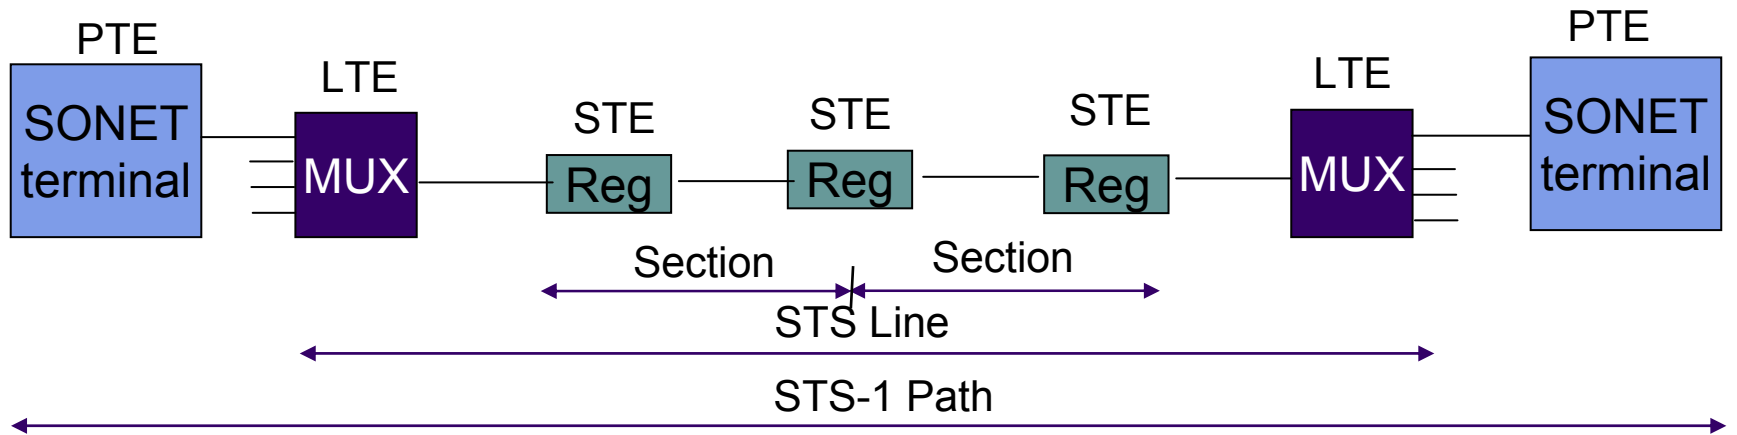

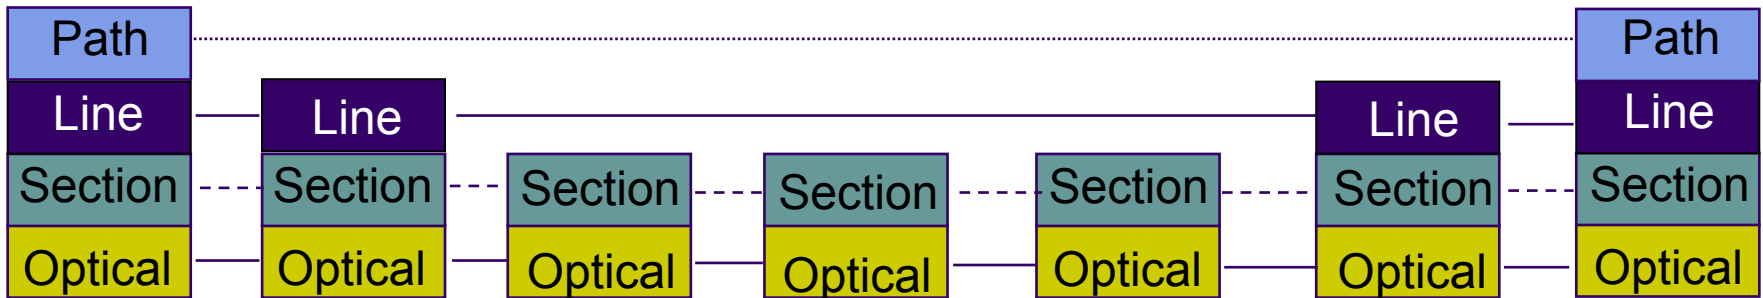

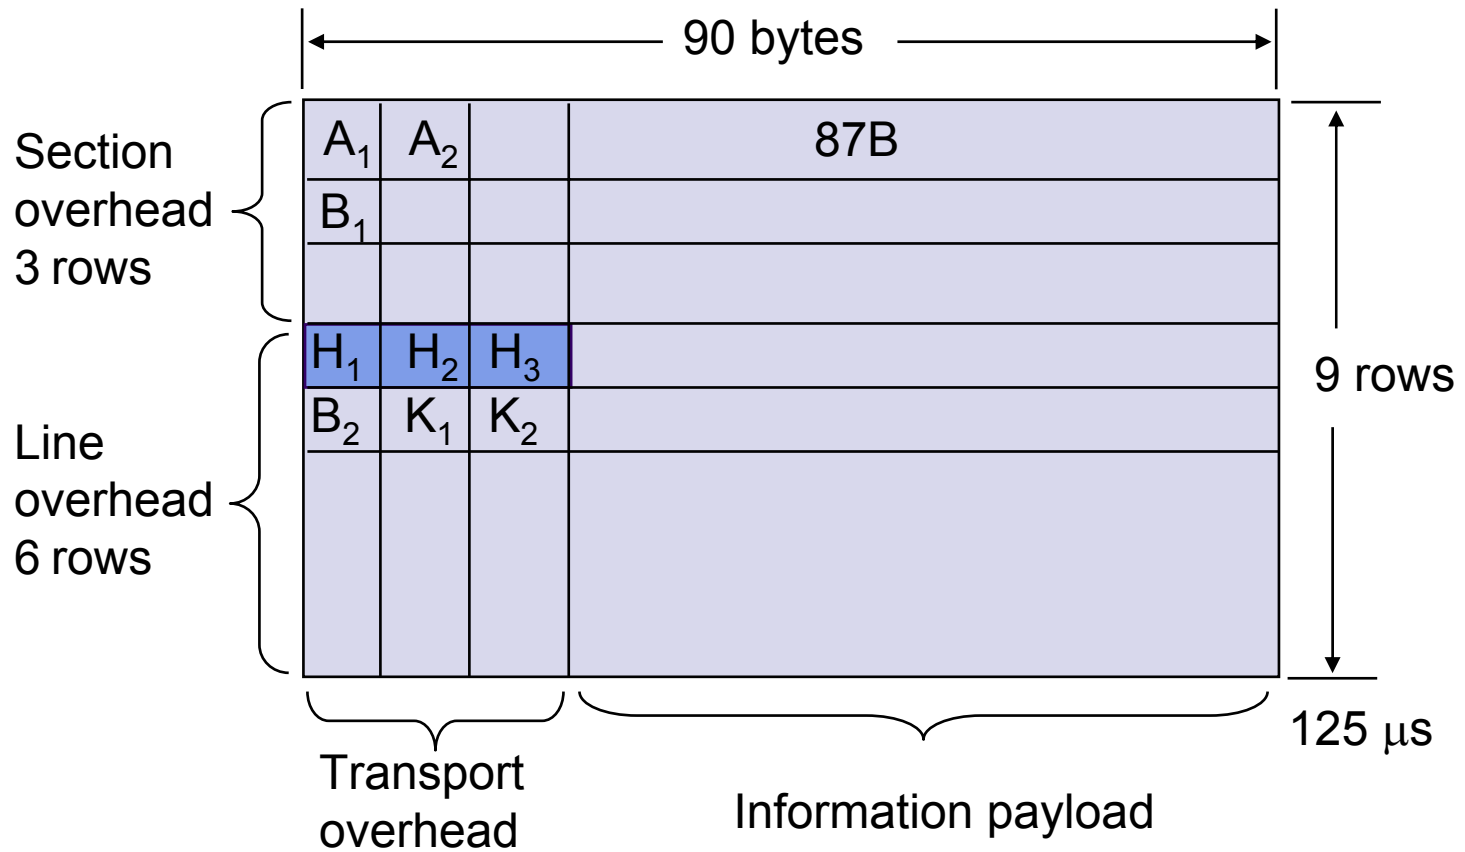

(a)

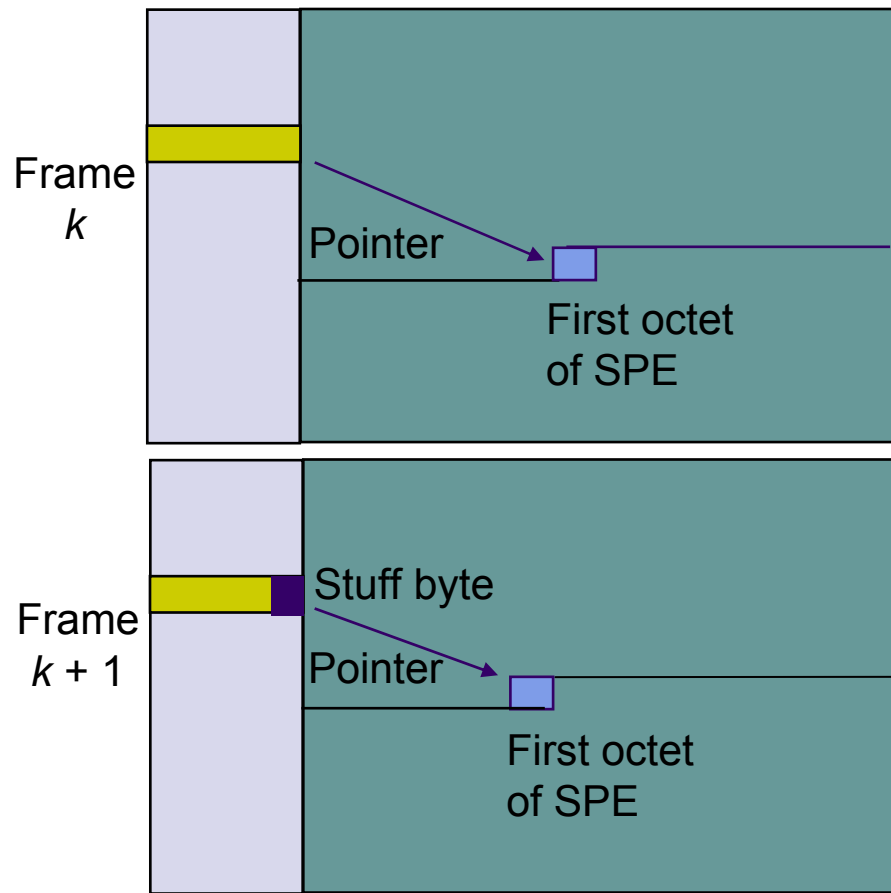

STE = Section Terminating Equipment, for example, a repeater/regenerator
LTE = Line Terminating Equipment, for example, a STS-1 to STS-3 multiplexer
PTE = Path Terminating Equipment, for example, an STS-1 multiplexer

(b)

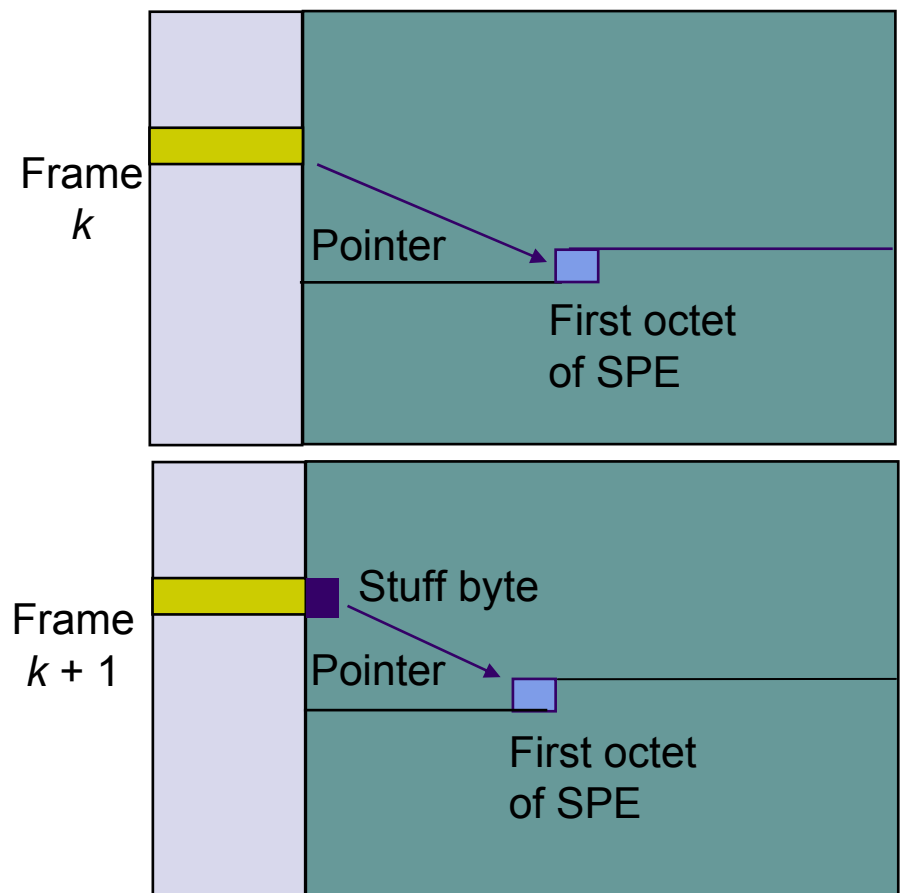

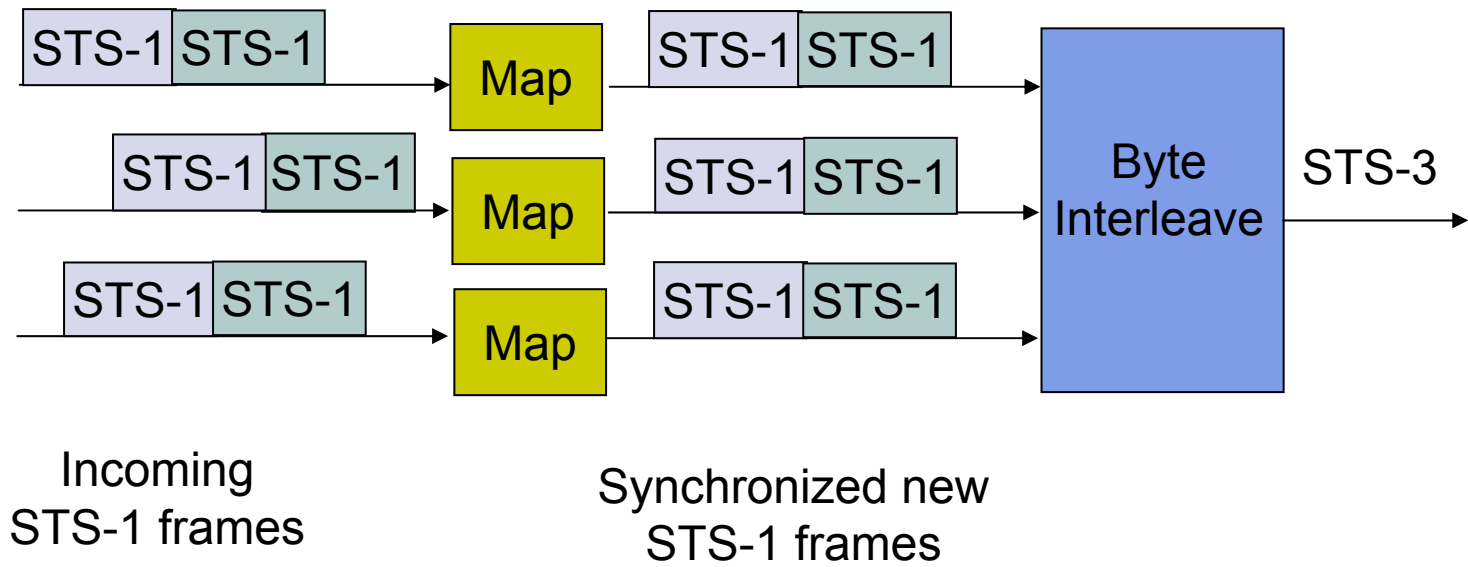

(a) Negative byte stuffing

(b) Positive byte stuffing

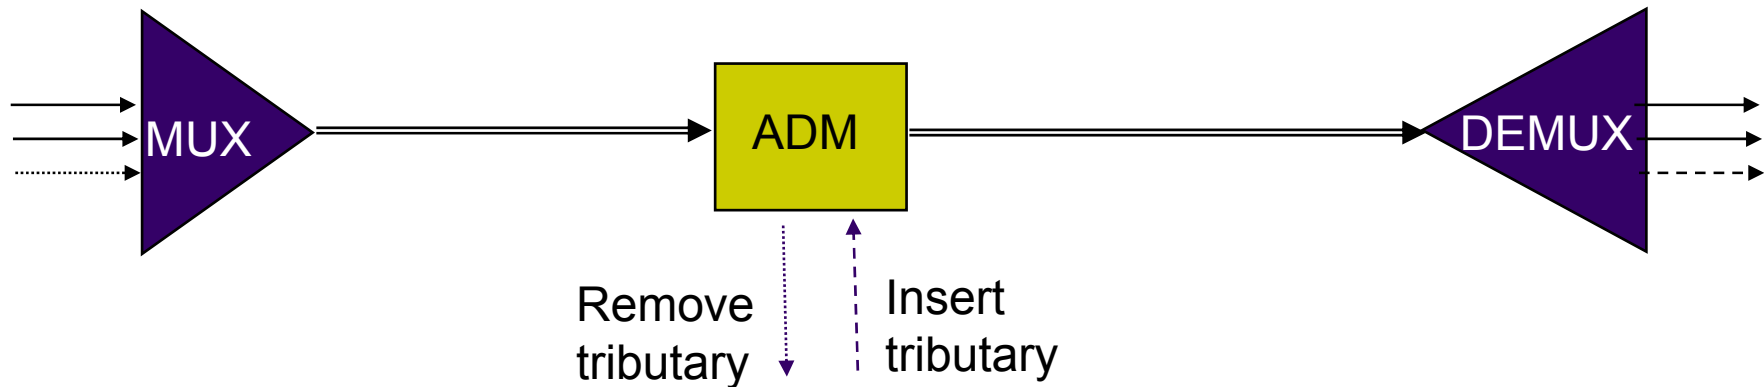

(a) Pre-SONET multiplexing

(b) SONET add-drop multiplexing

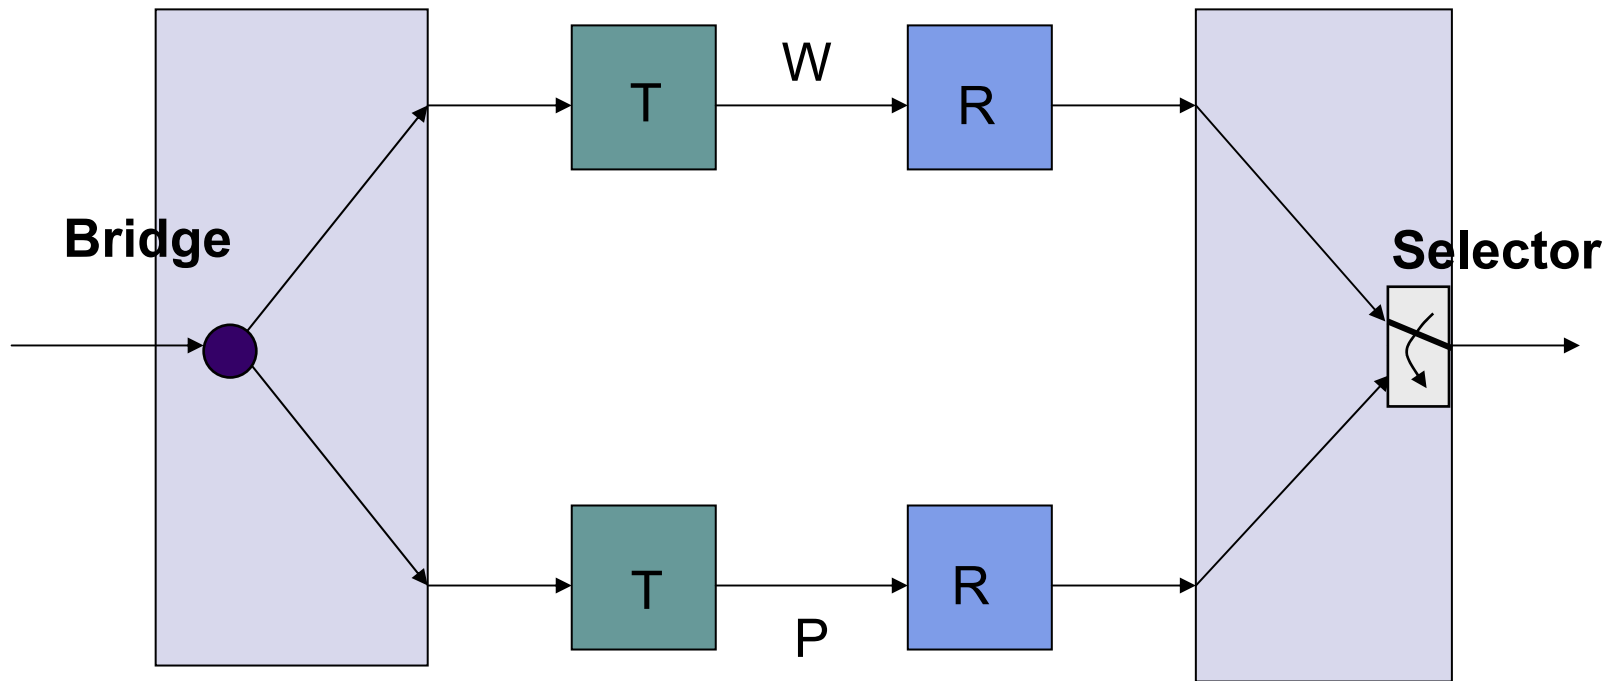

(a)

(b)

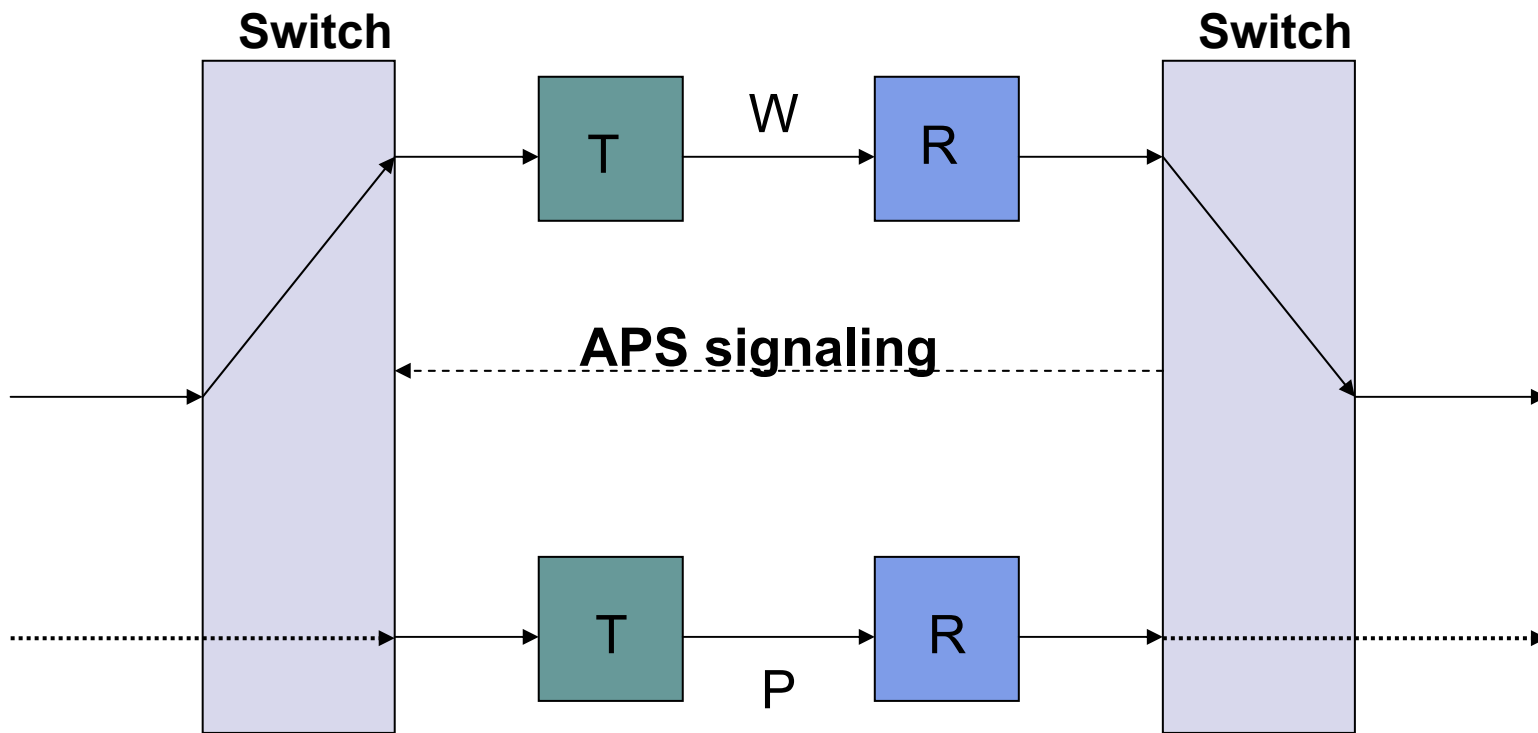

T = Transmitter

W = Working line

R = Receiver

P = Protection line

T = Transmitter
R = Receiver

W = Working line
P = Protection line

T = Transmitter
R = Receiver

W = Working line
P = Protection line

Three ADMs connected in physical ring topology

Logical fully connected topology

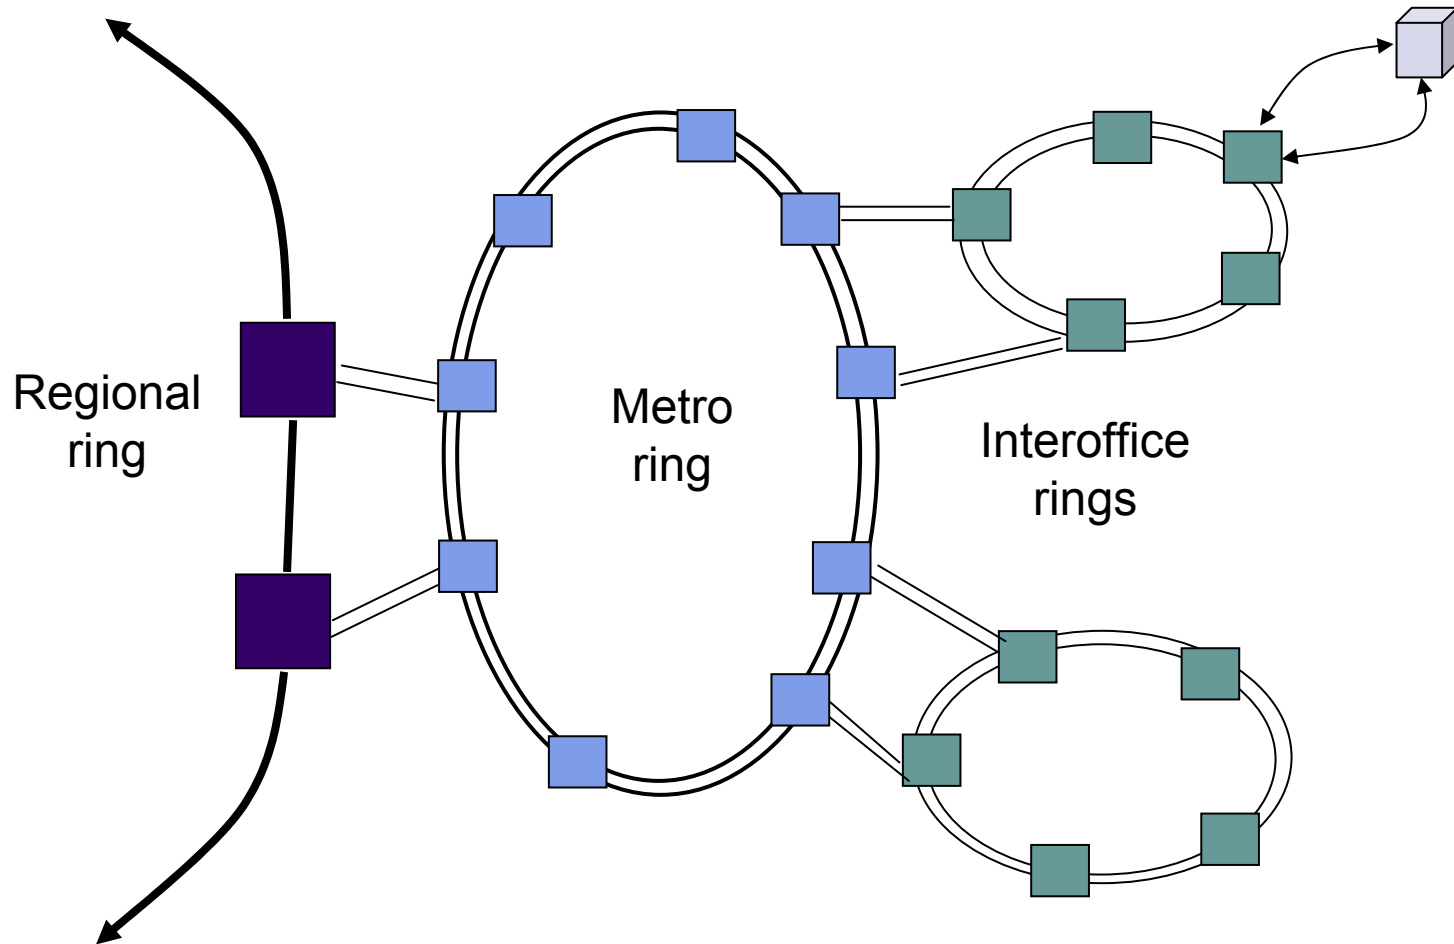

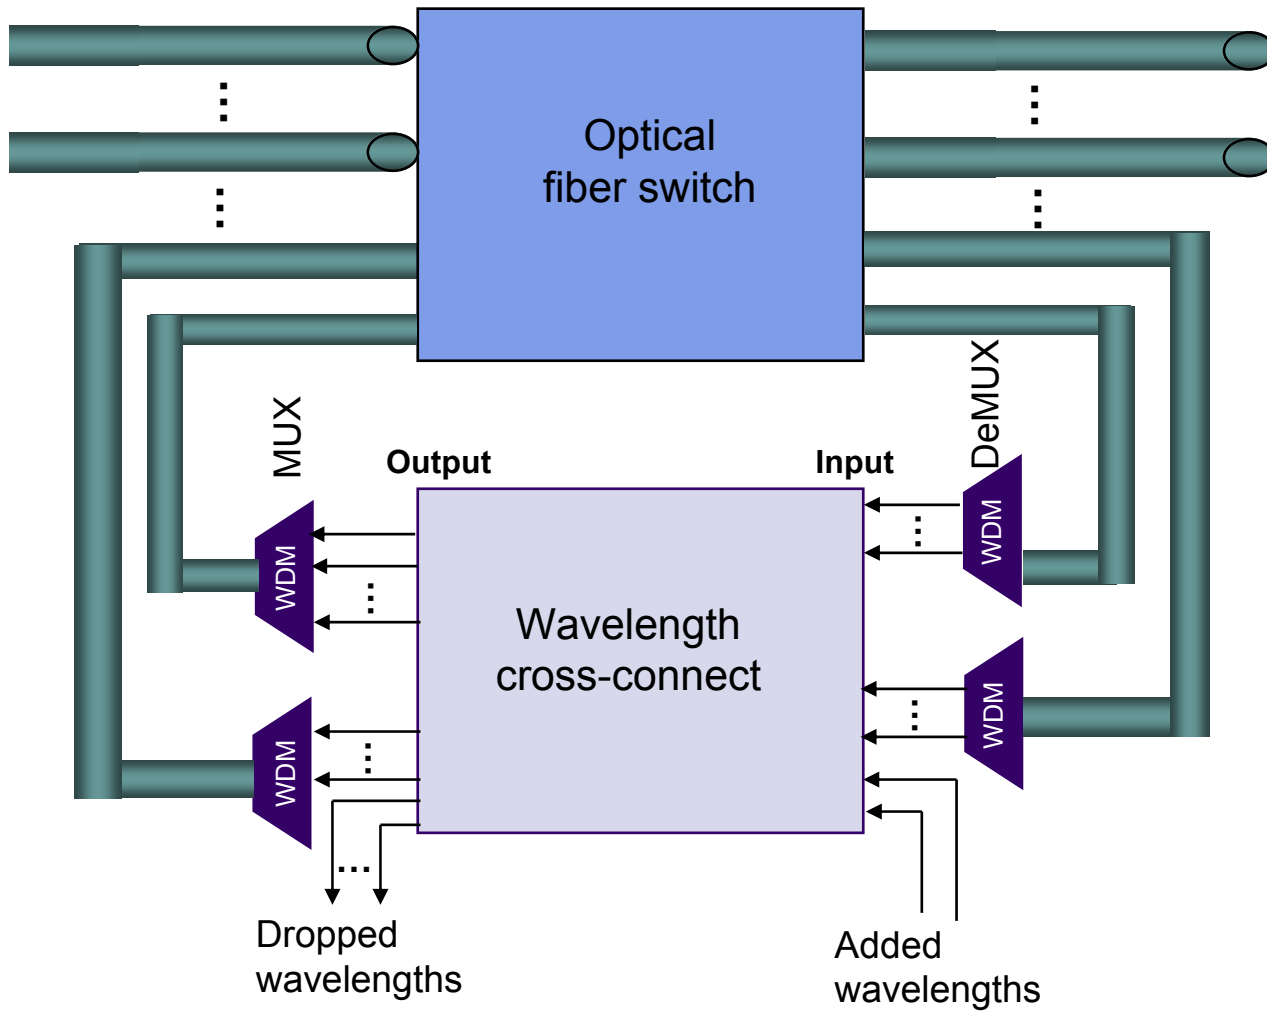

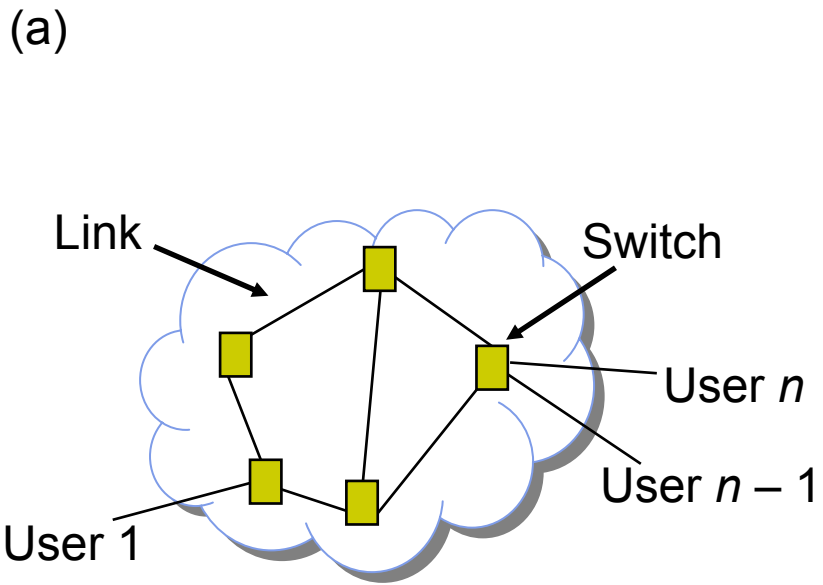

(a) WDM chain network

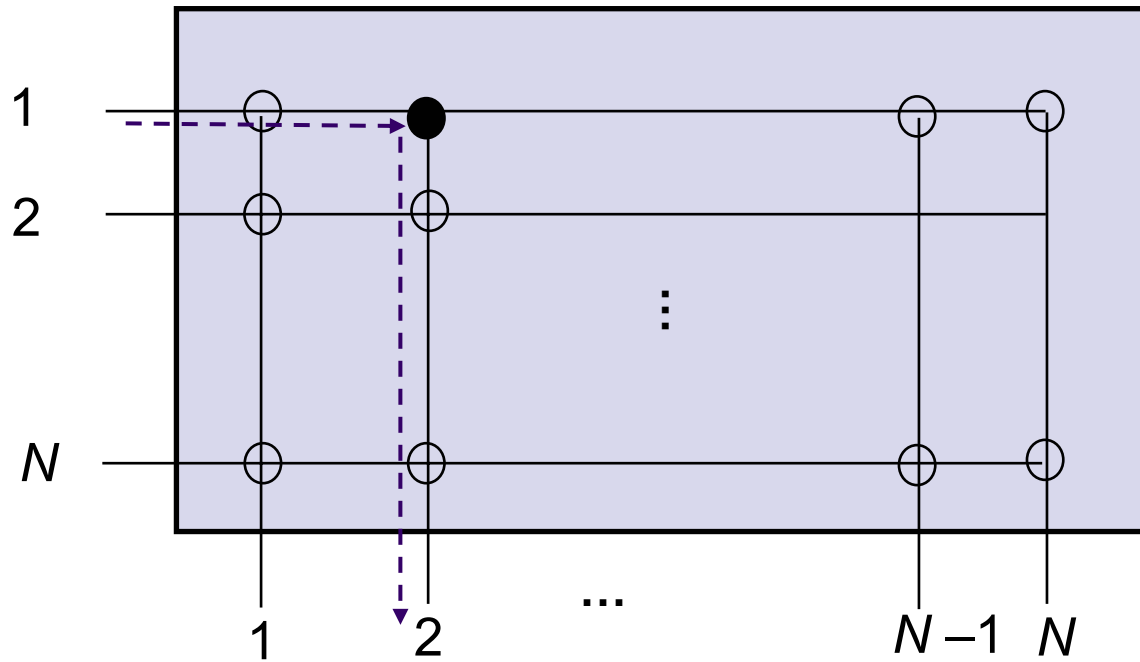

(b) WDM ring network

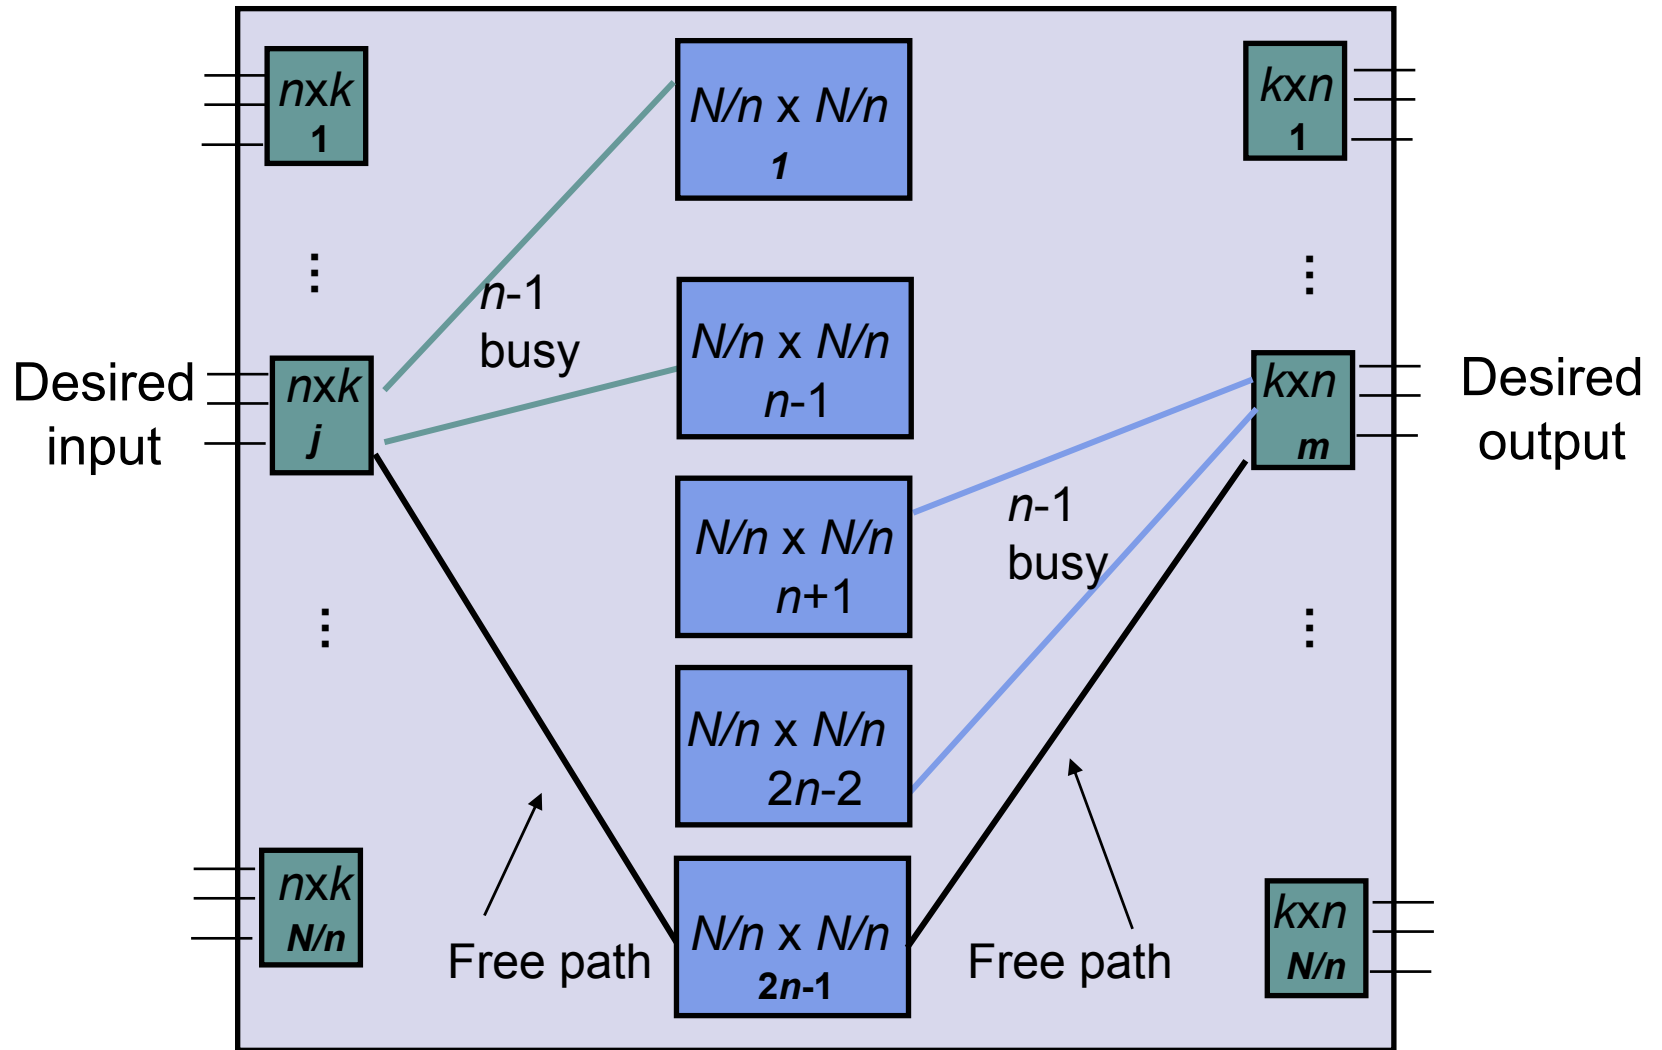

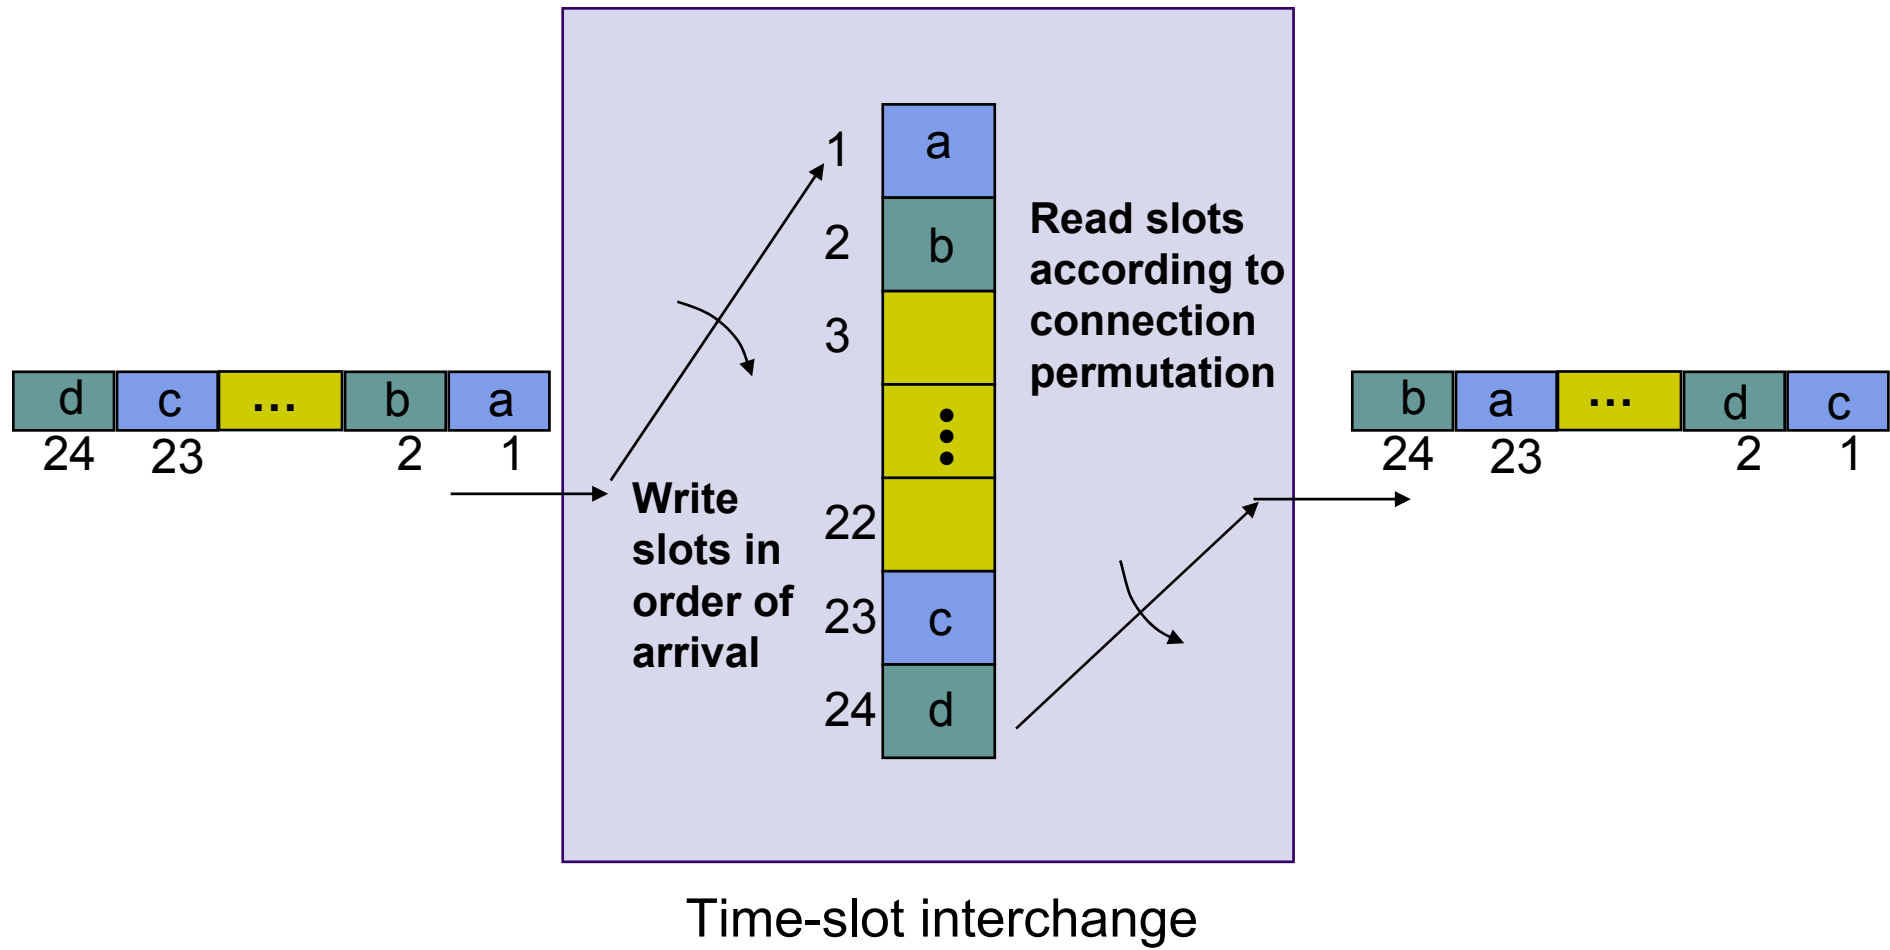

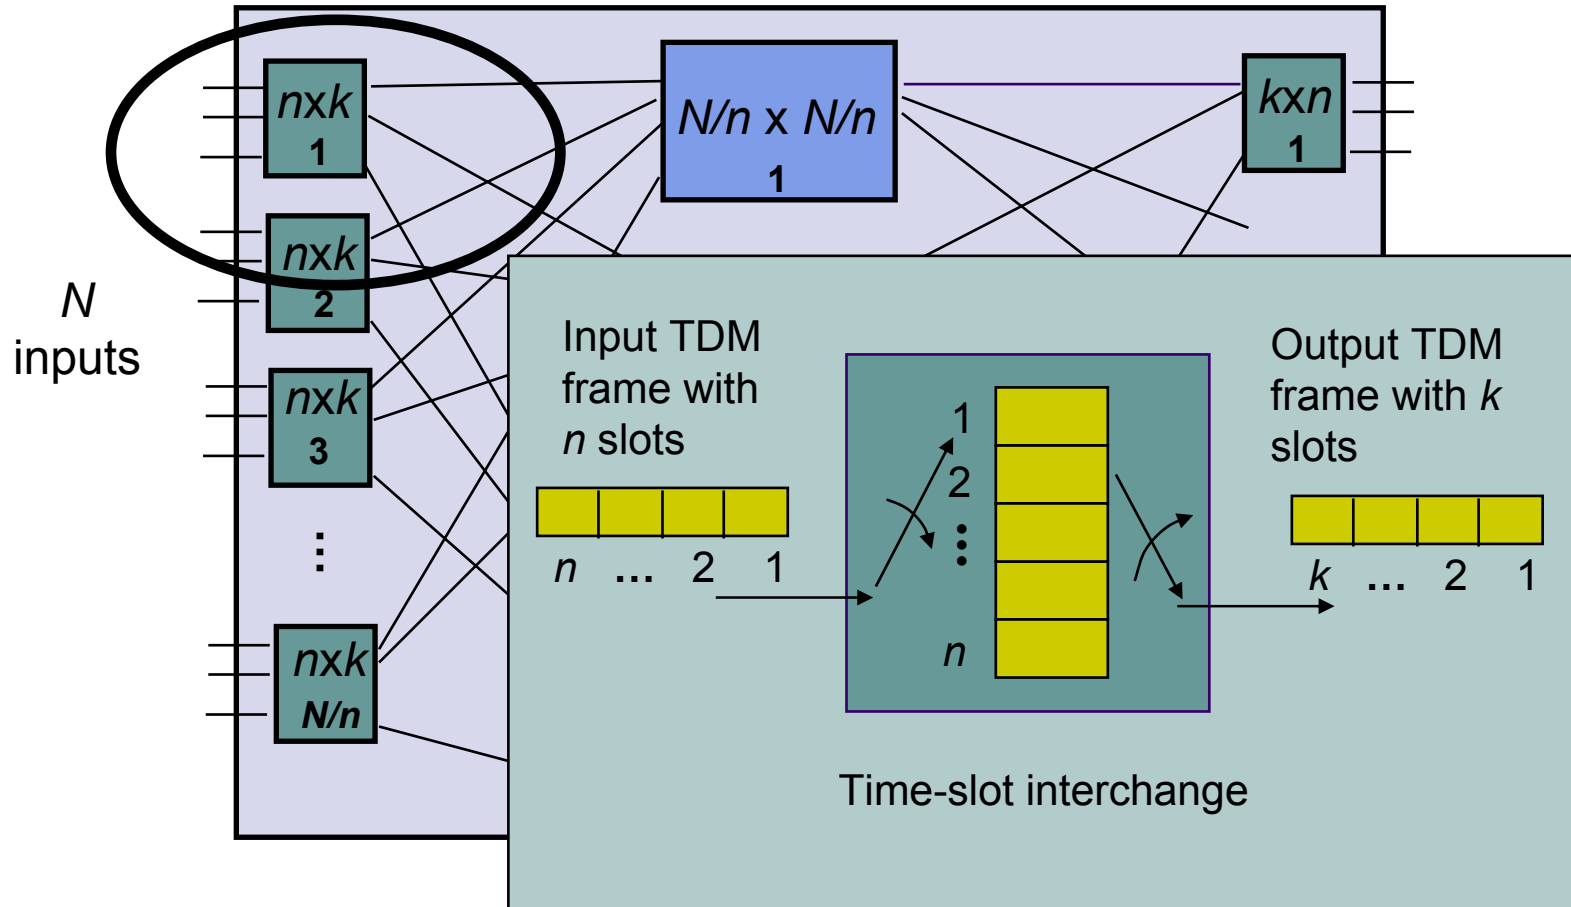

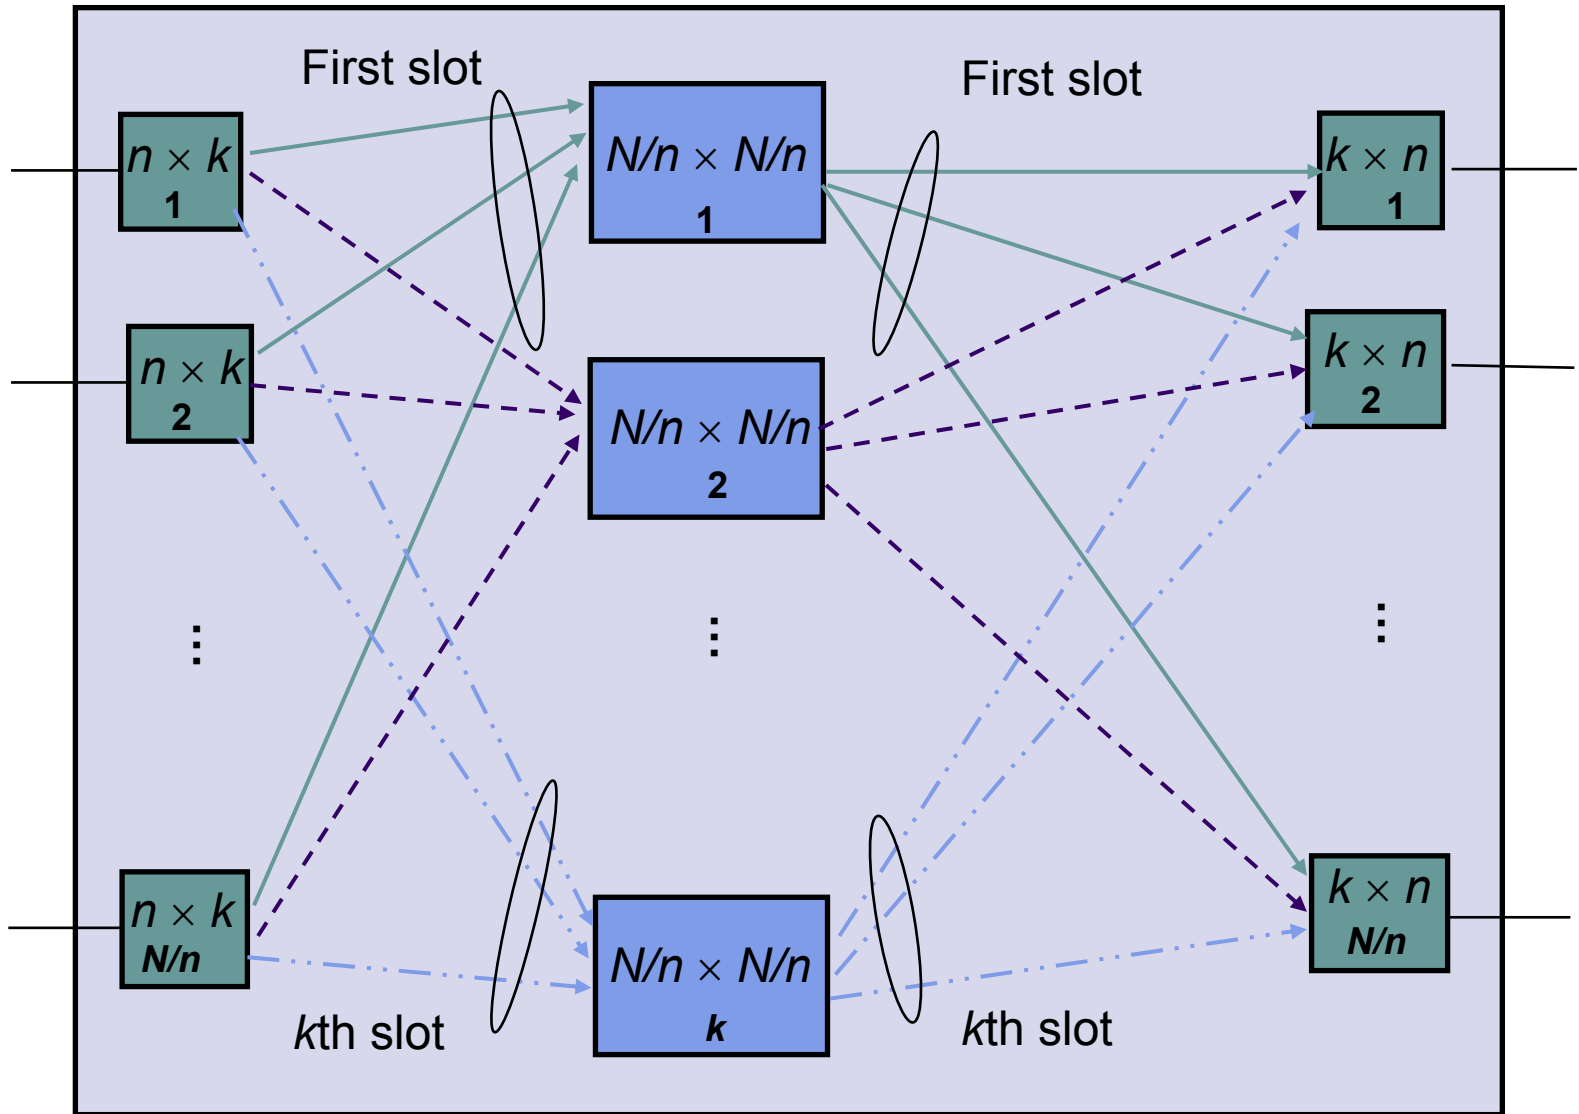

$$2(N/n)nk + k(N/n)^2 \text{ crosspoints}$$

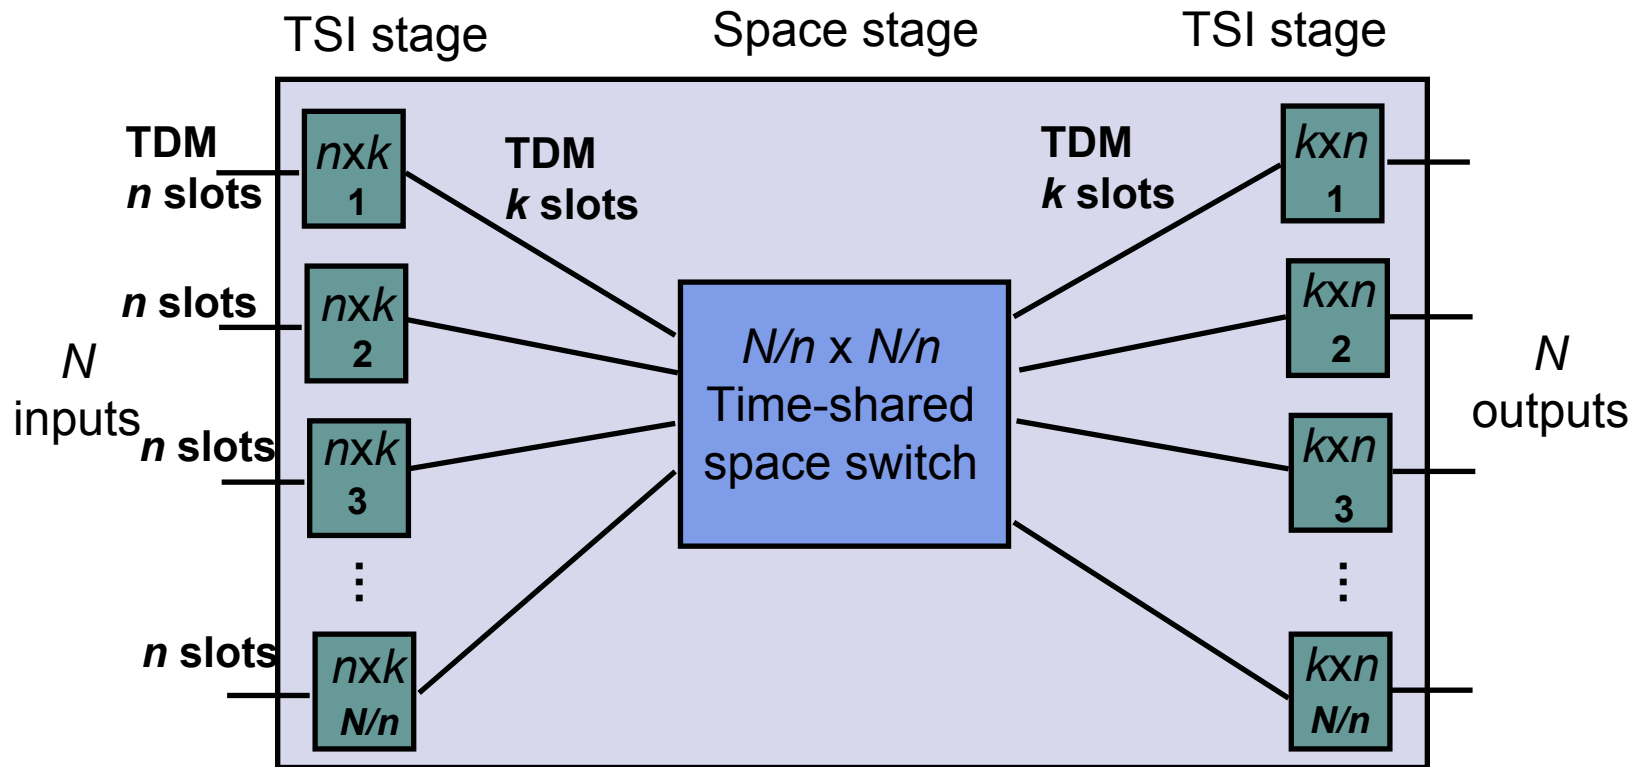

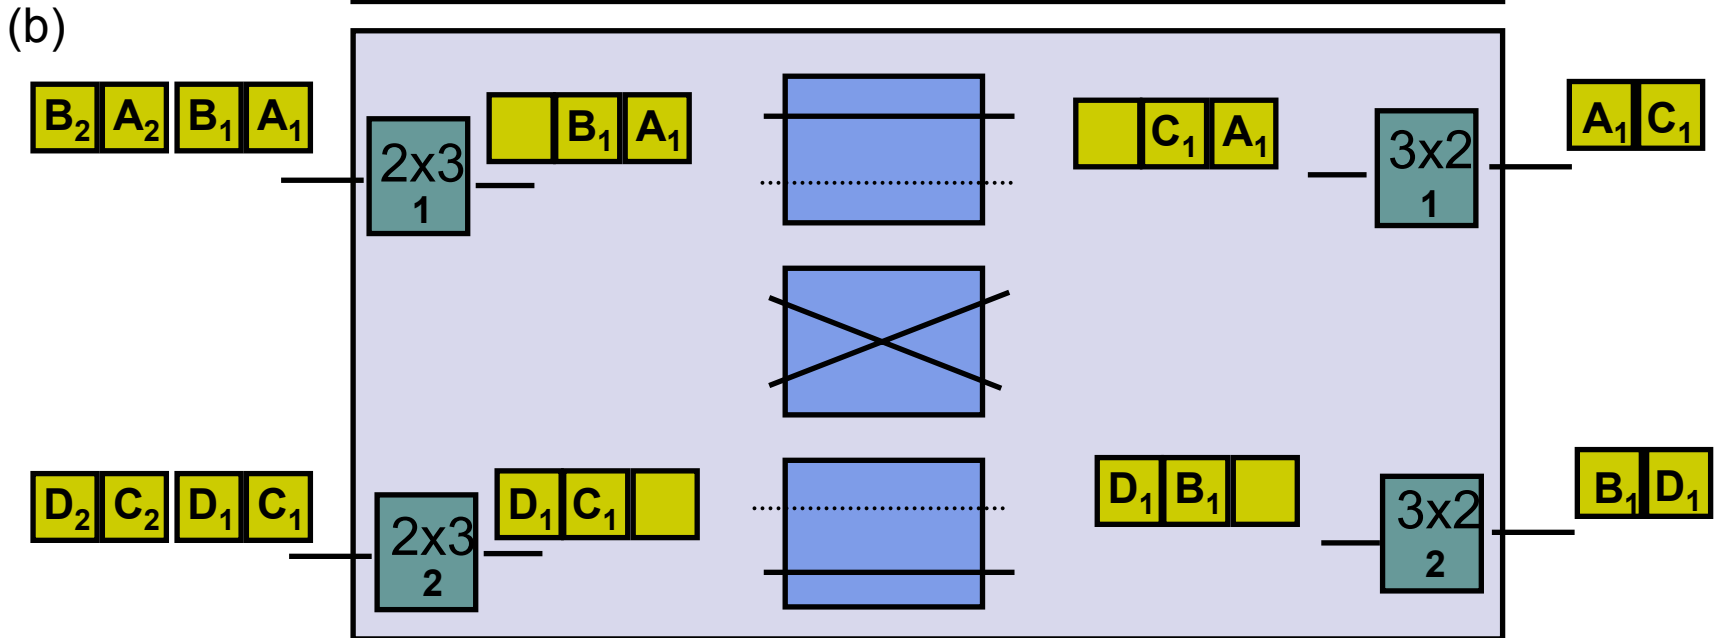

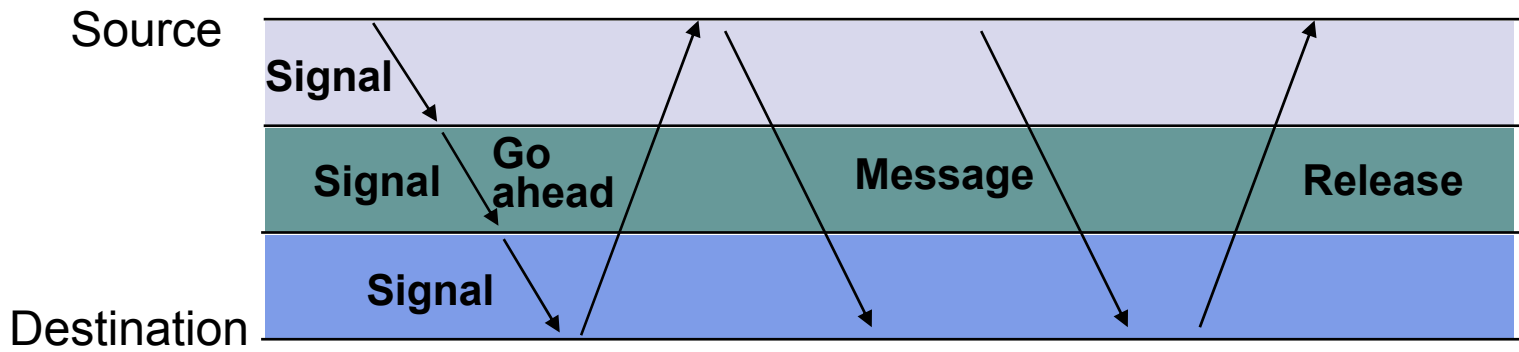

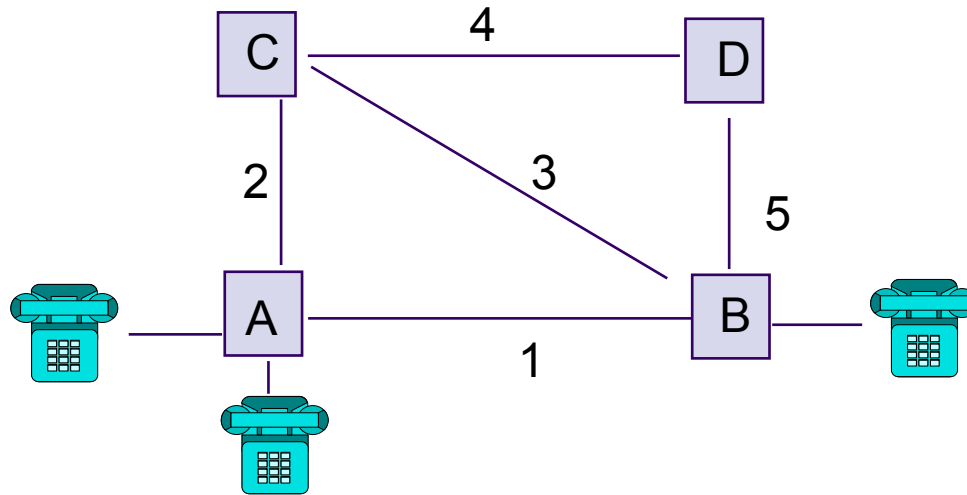

(a)

(b)

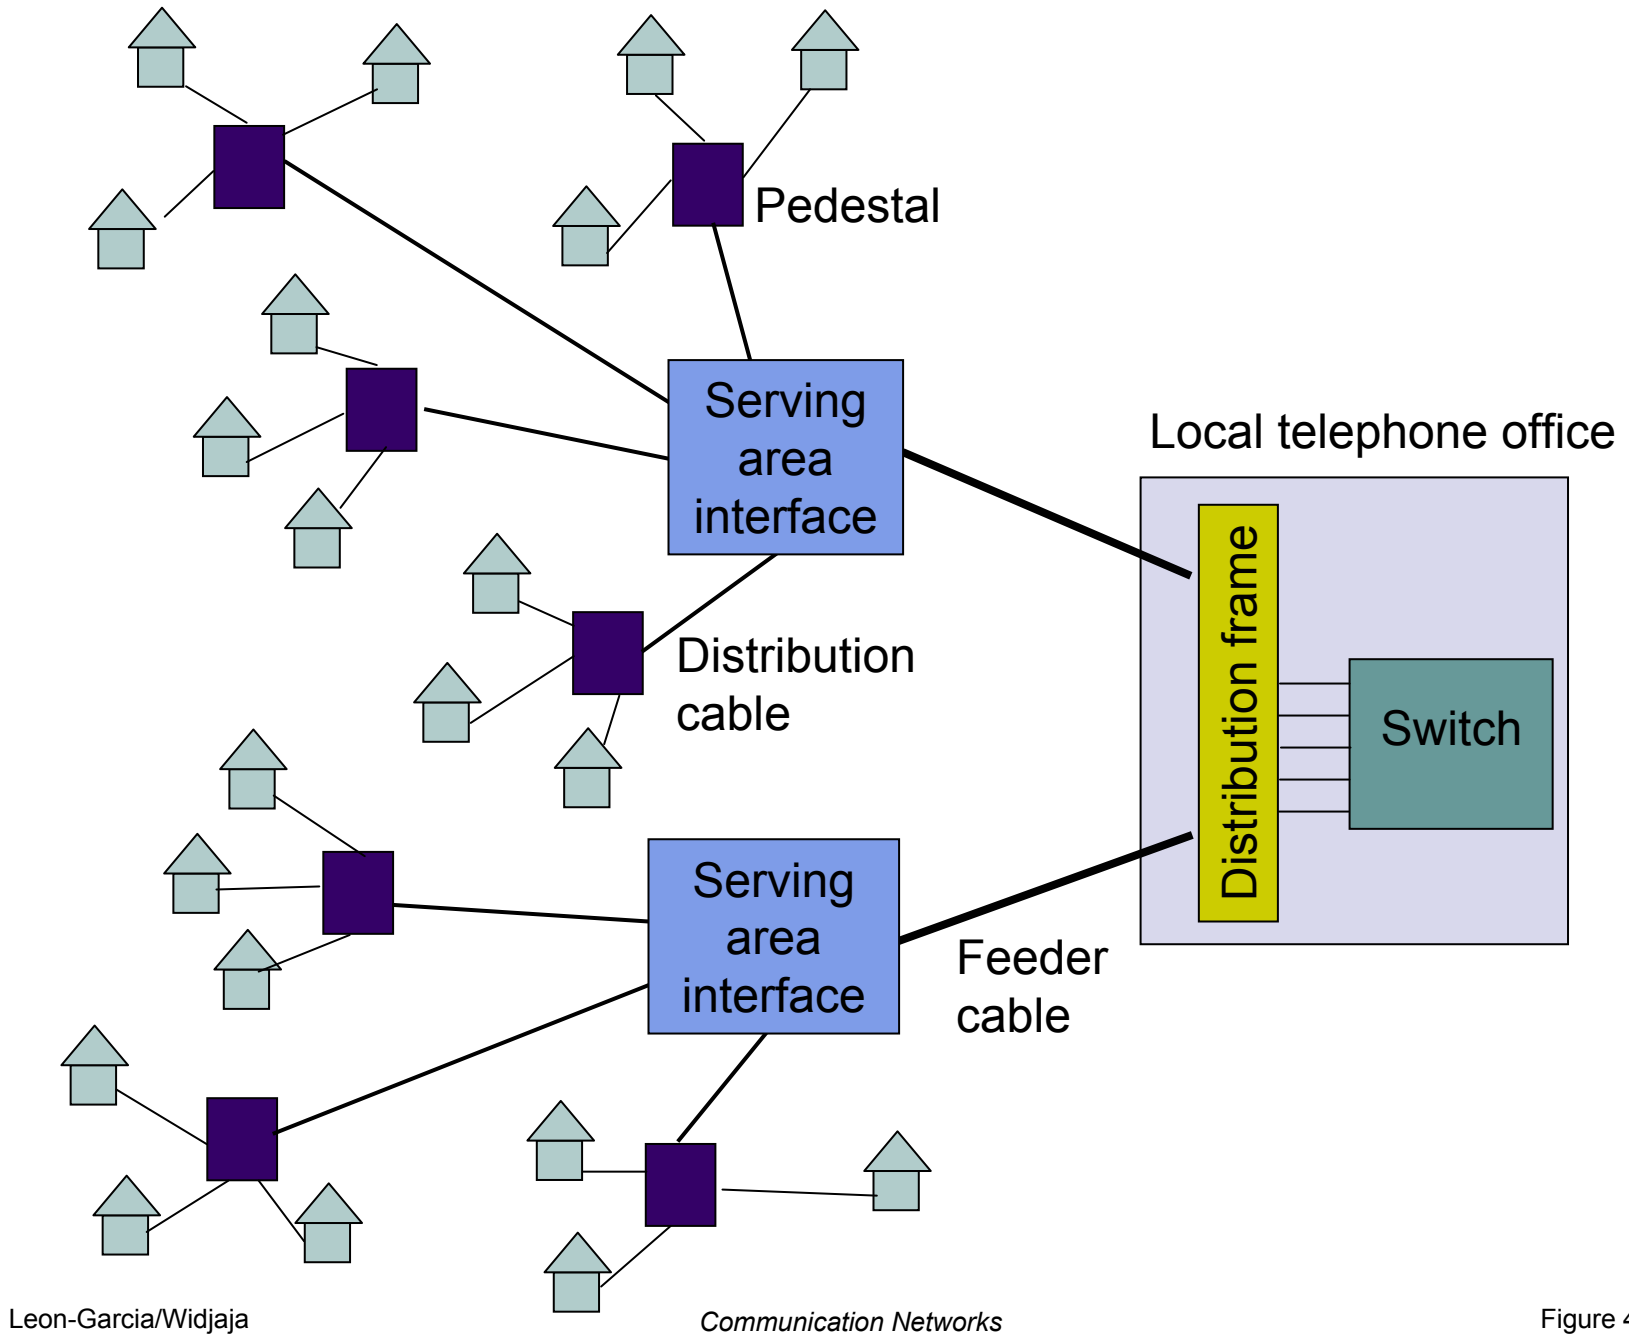

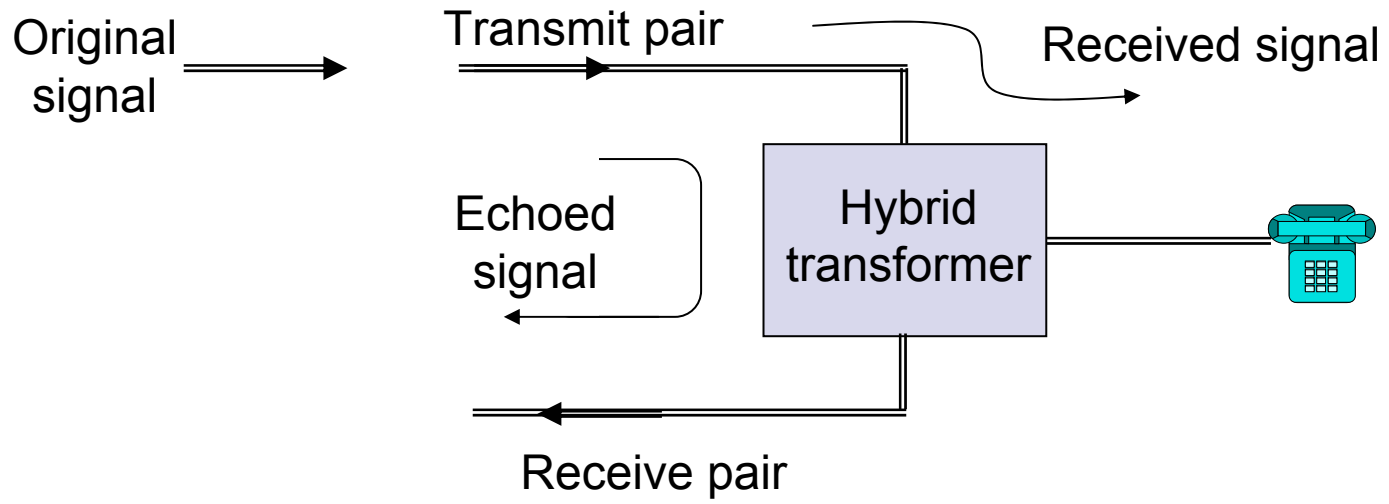

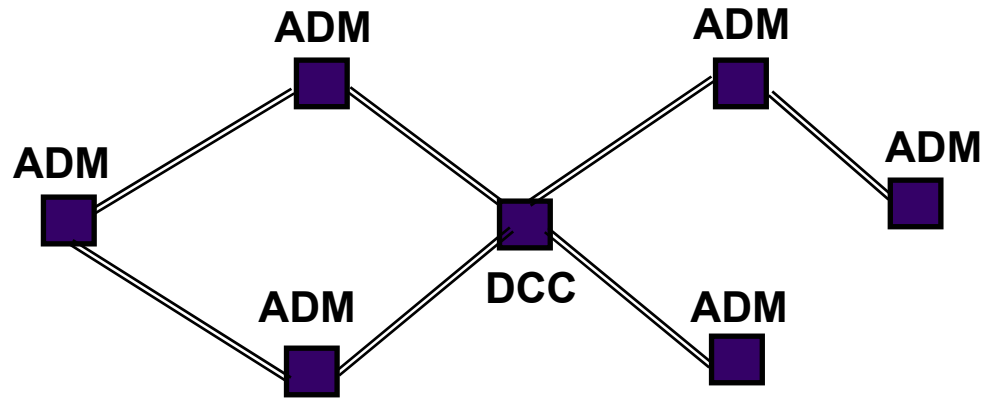

Figure 4.45

(a)

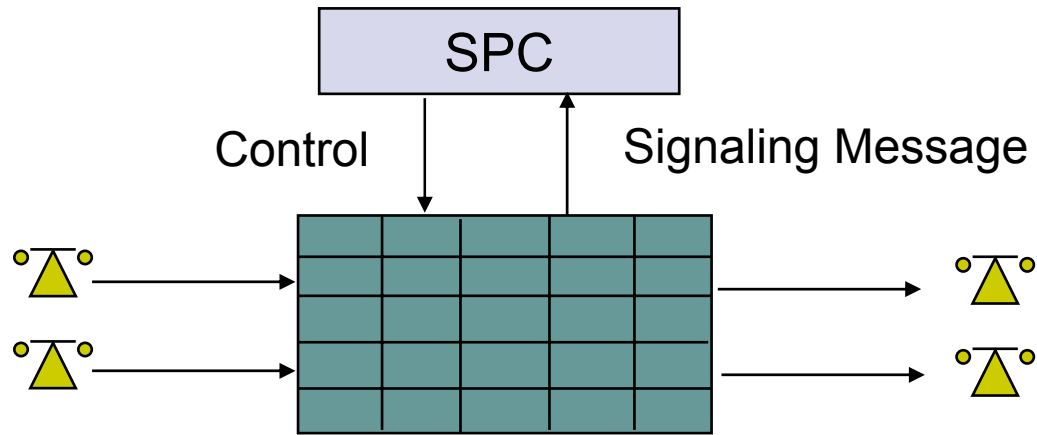

(b)

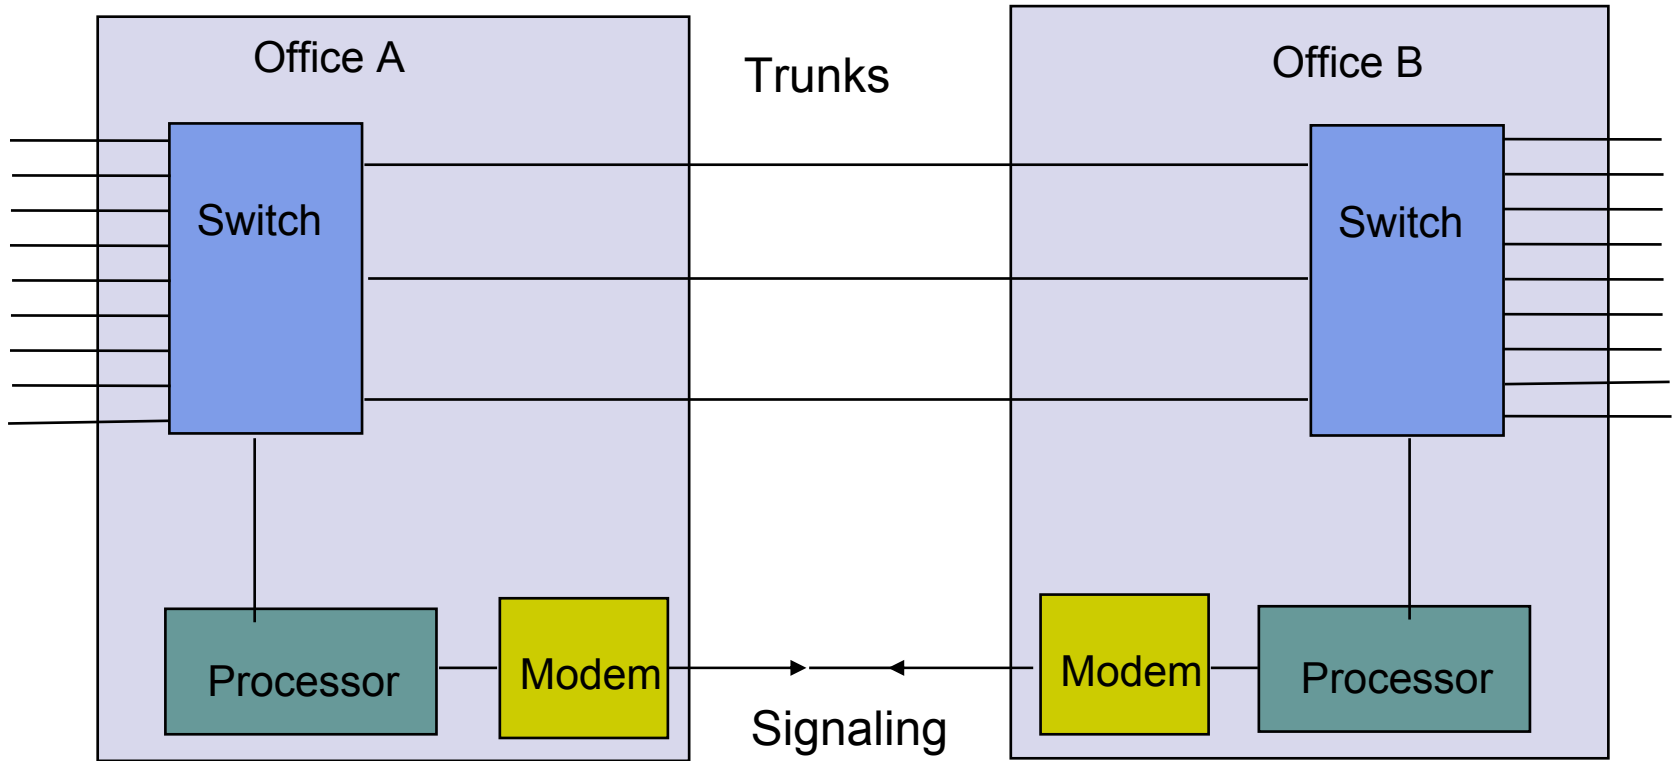

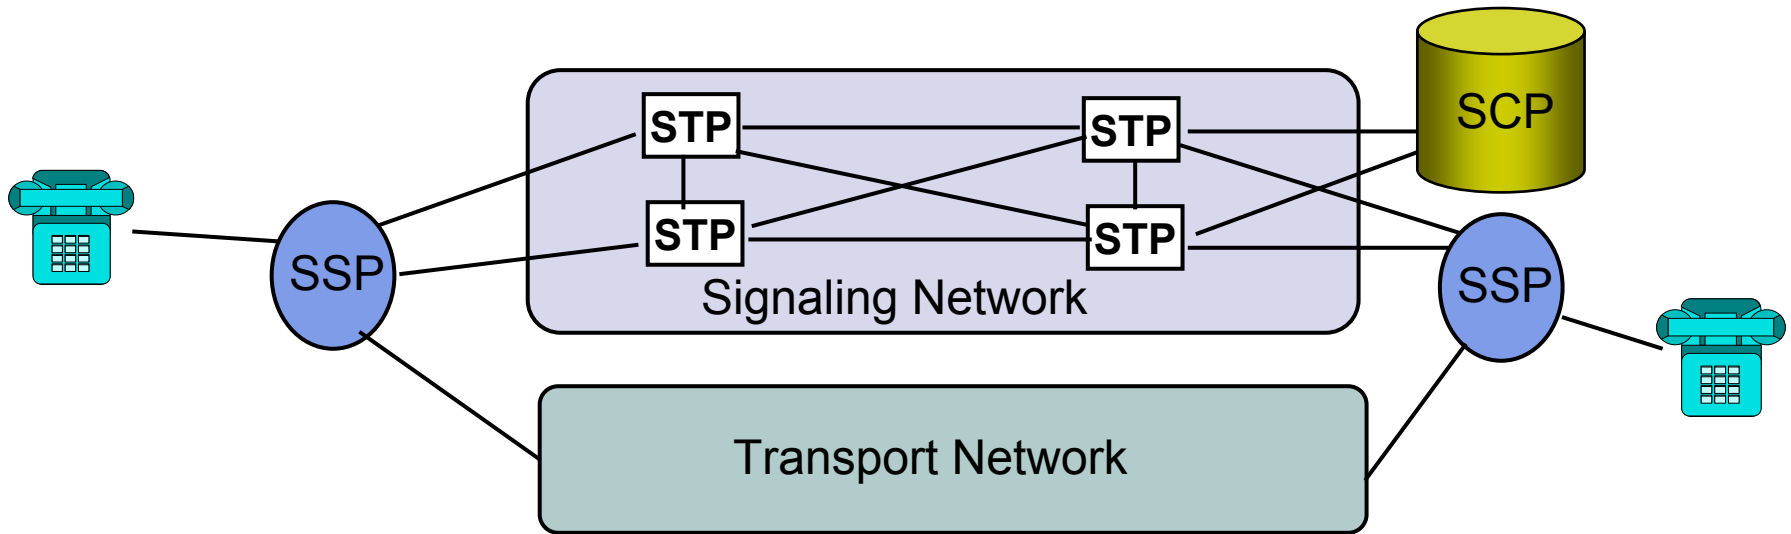

Basic rate interface (BRI): 2B+D

Primary rate interface (PRI): 23B+D

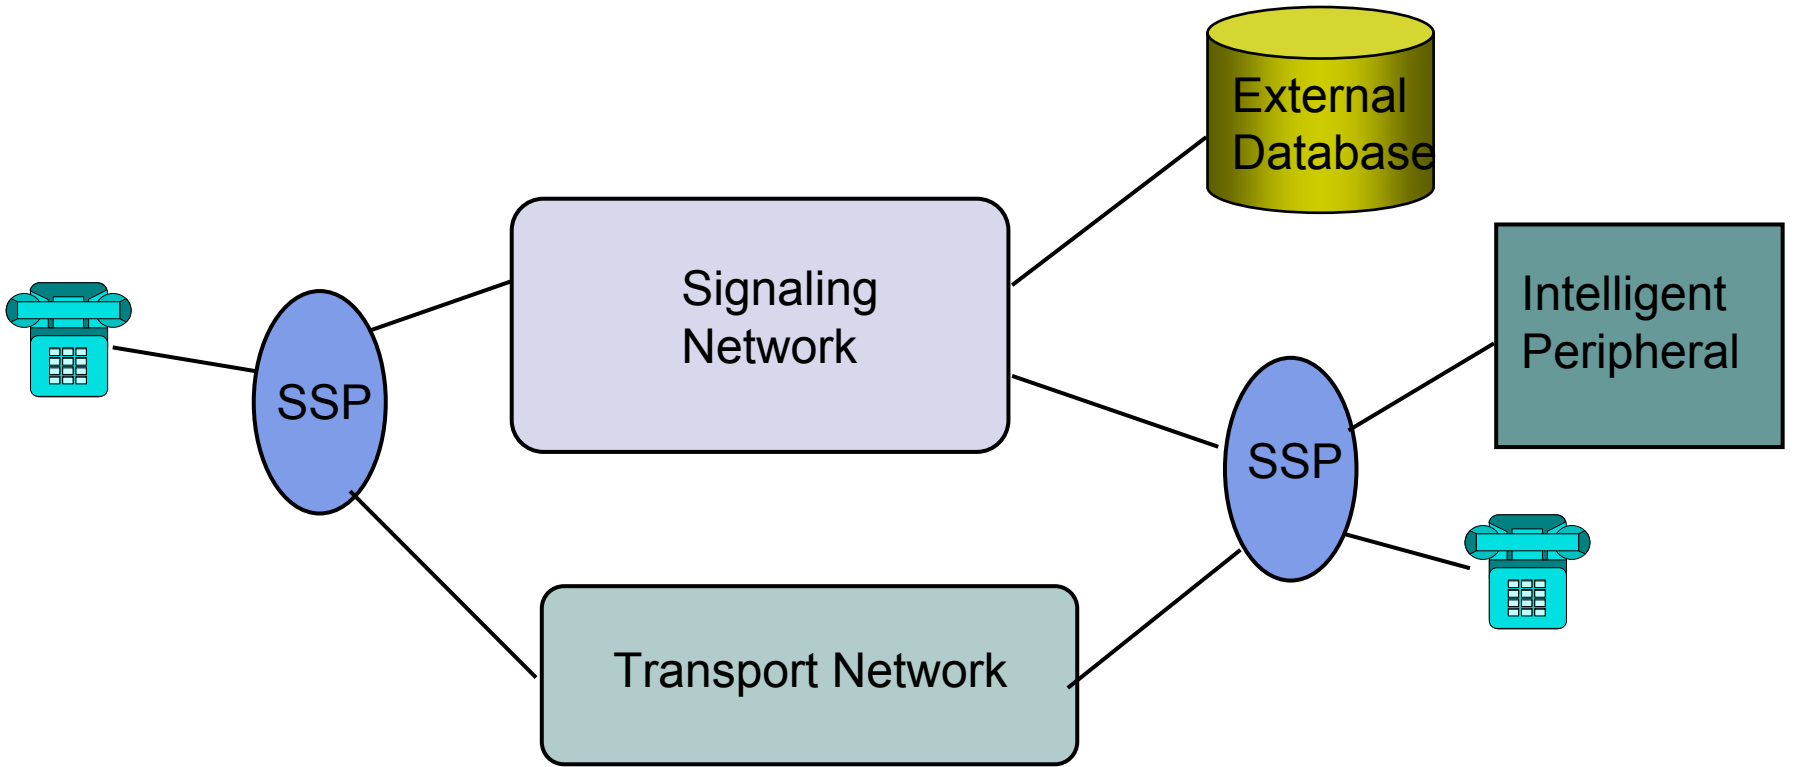

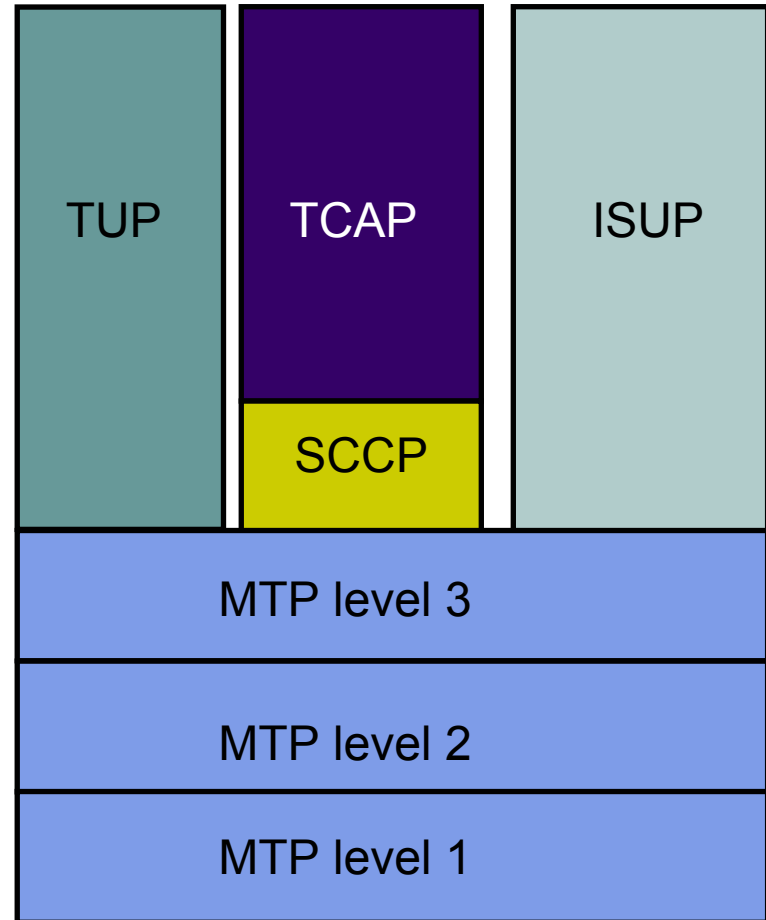

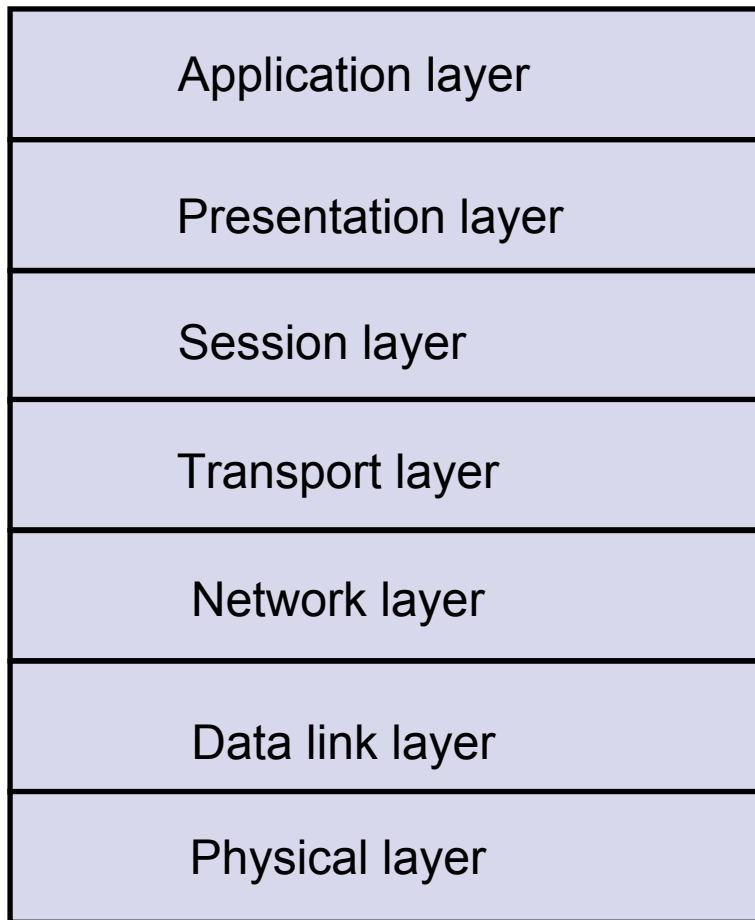

SSP = service switching point (signal to message)

STP = signal transfer point (message transfer)

SCP = service control point (processing)

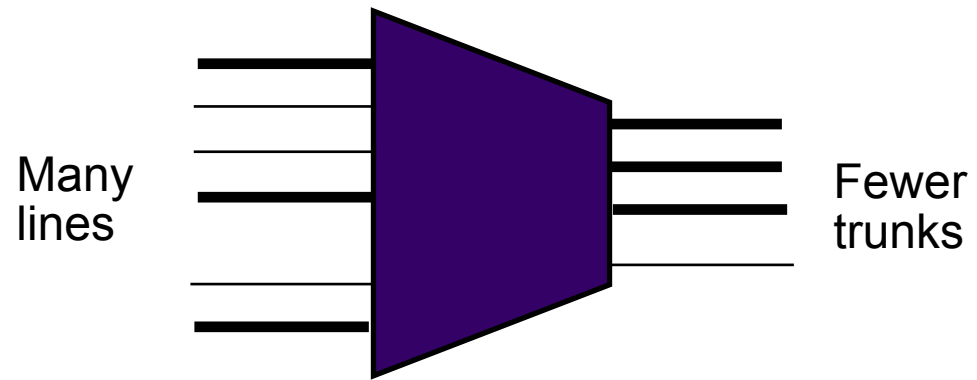

ISUP = ISDN user part

SSCP = signaling connection control part

TUP = telephone user part

MTP = message transfer part

TCAP = transaction capabilities part

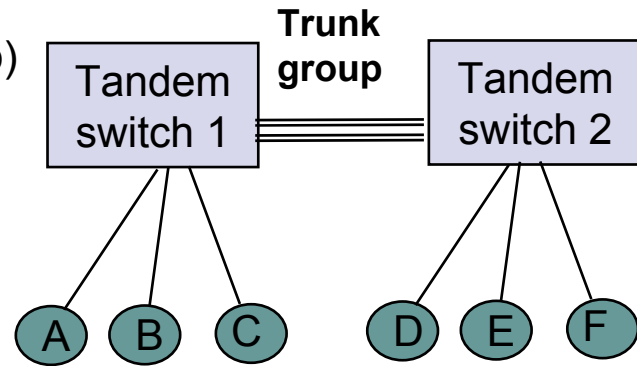

(a)

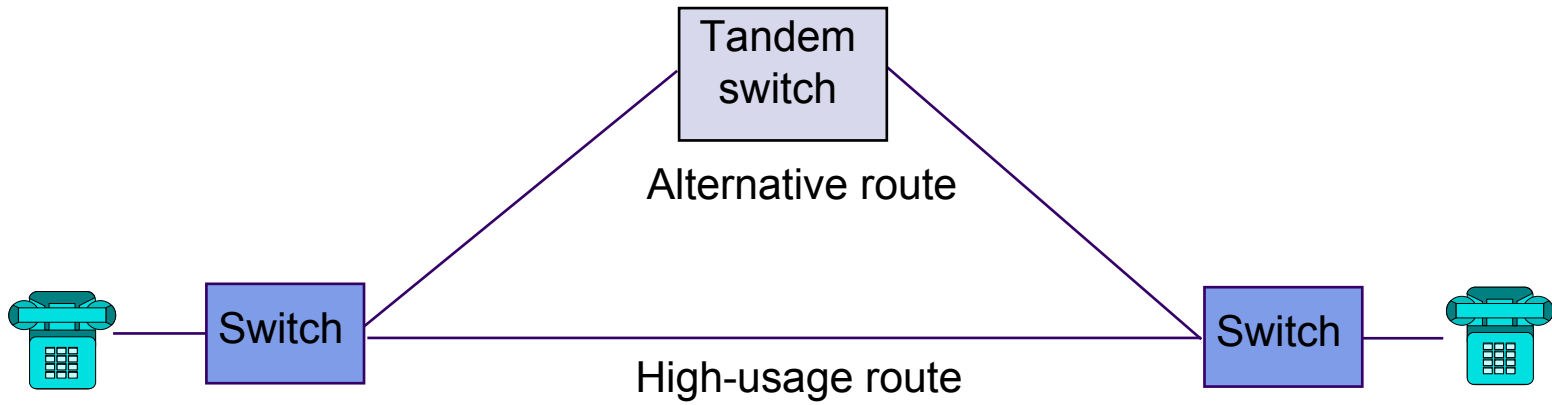

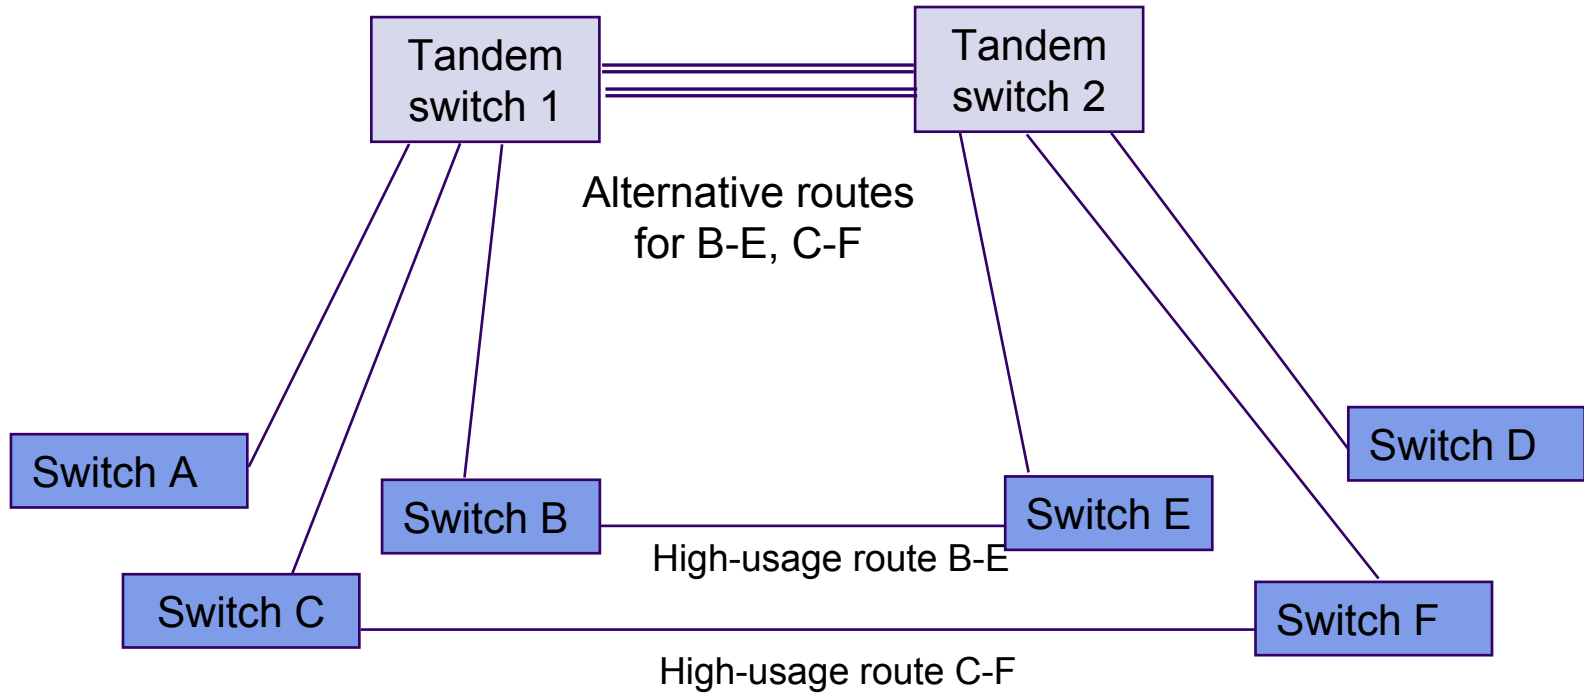

10 Erlangs between each pair

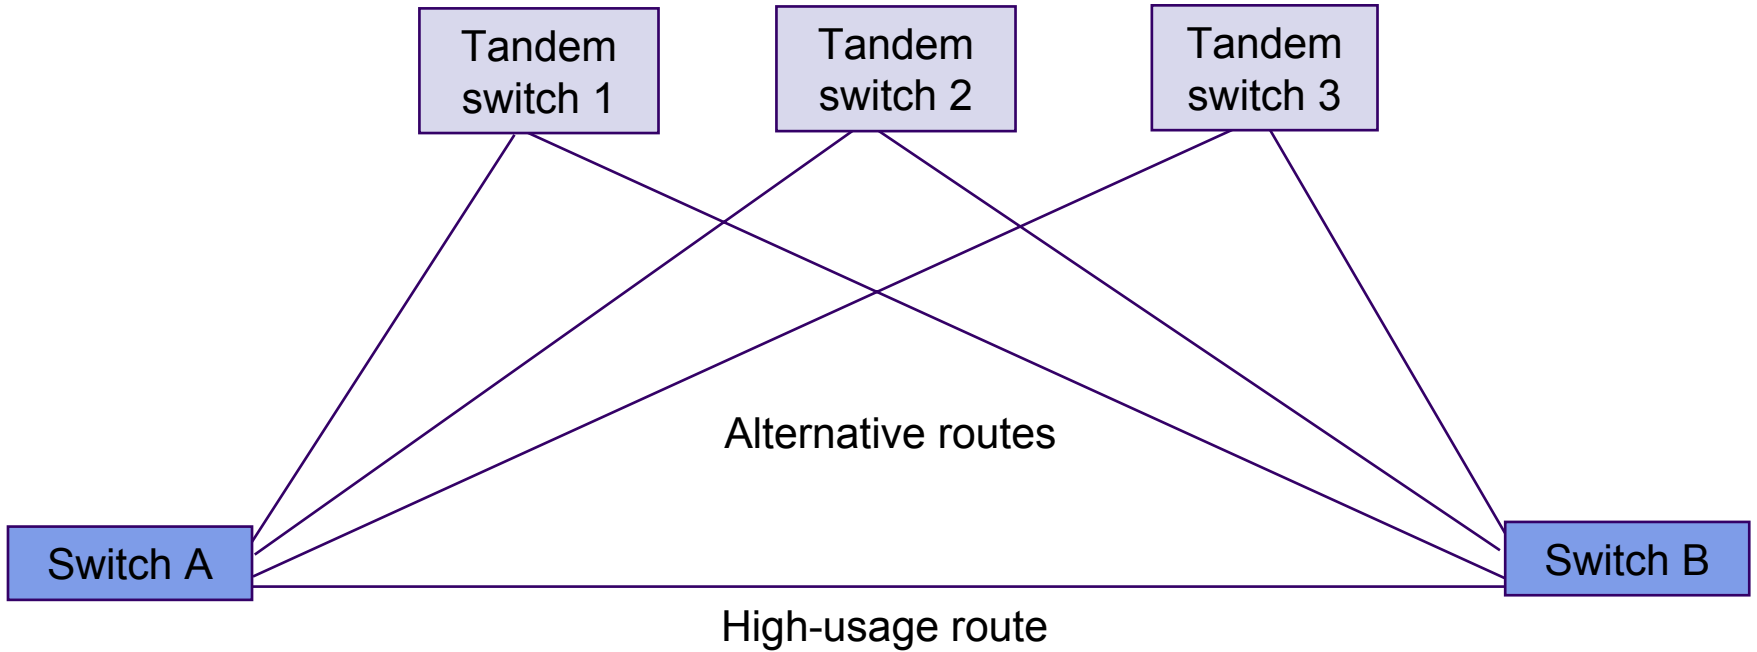

(b)

90 Erlangs when combined

AC = authentication center
 BSS = base station subsystem
 EIR = equipment identity register
 HLR = home location register

MSC = mobile switching center
 PSTN = public switched telephone network
 STP = signal transfer point
 VLR = visitor location register
