

CONTENTS

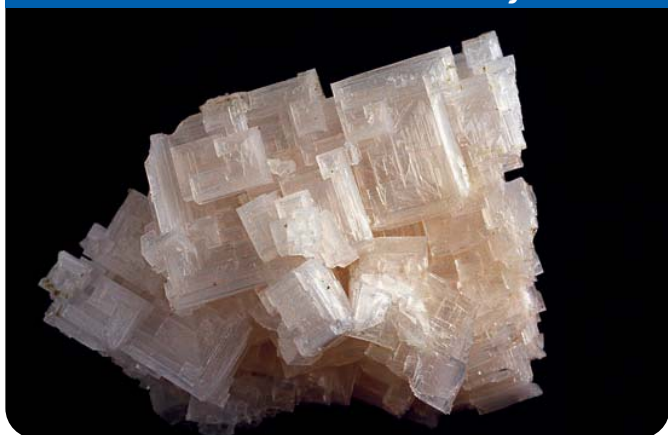

Preface v

Chapter 1

An Introduction to Biology 1

- 1.1 The Properties of Life: Past and Present 3
Genomes and Proteomes: The Study of Genomes and Proteomes Provides an Evolutionary Foundation for Our Understanding of Biology 11
- 1.2 Biology as a Scientific Discipline 12
Feature Investigation: Observation and Experimentation Form the Core of Biology 18

UNIT I Chemistry

Chapter 2

The Chemical Basis of Life I: Atoms, Molecules, and Water 21

- 2.1 Atoms 21
Feature Investigation: Rutherford Determined the Modern Model of the Atom 22
- 2.2 Chemical Bonds and Molecules 27
- 2.3 Properties of Water 33

Chapter 3

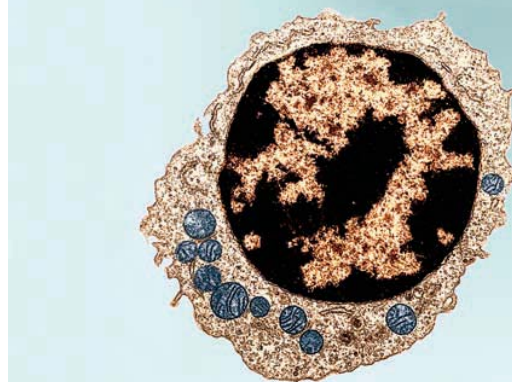

The Chemical Basis of Life II: Organic Molecules 41

- 3.1 The Carbon Atom and the Study of Organic Molecules 41
- 3.2 Classes of Organic Molecules and Macromolecules 44

Feature Investigation: Anfinsen Showed That the Primary Structure of Ribonuclease Determines Its Three-Dimensional Structure 55

Genomes and Proteomes: Proteins Contain Functional Domains Within Their Structures 57

UNIT II Cell

Chapter 4

General Features of Cells 61

- 4.1 Microscopy 61
- 4.2 Overview of Cell Structure 64
Genomes and Proteomes: The Proteome Determines the Characteristics of a Cell 67
- 4.3 The Cytosol 68
Feature Investigation: Sheetz and Spudich Showed That Myosin Walks Along Actin Filaments 73
- 4.4 The Nucleus and Endomembrane System 75
- 4.5 Semiautonomous Organelles 80

Chapter 5

Membrane Structure and Transport 85

- 5.1 Membrane Structure 89
Genomes and Proteomes: Approximately 25% of All Genes Encode Membrane Proteins 87
- 5.2 Membrane Transport 92
Feature Investigation: Agre Discovered That Osmosis Occurs More Quickly in Cells with Transport Proteins That Allow the Facilitated Diffusion of Water 95

Chapter 6

Systems Biology of Cell Organization 105

- 6.1 Principles of Cell Organization 105
- 6.2 The Endomembrane System 112
Feature Investigation: Palade Demonstrated That Secreted Proteins Move Sequentially Through Organelles of the Endomembrane System 115
- 6.3 The Semiautonomous Organelles 120
Genomes and Proteomes: Mitochondria and Chloroplasts Are Derived from Ancient Symbiotic Relationships 121

Chapter 7

Enzymes, Metabolism, and Cellular Respiration 125

- 7.1 Energy, Chemical Reactions, and Enzymes 125
- 7.2 Overview of Metabolism 130
Genomes and Proteomes: Many Proteins Use ATP as a Source of Energy 132
- 7.3 Cellular Respiration 134
Feature Investigation: Yoshida and Kinosita Demonstrated That the γ Subunit of the ATP Synthase Spins 142
- 7.4 Secondary Metabolism 145

Chapter 8

Photosynthesis 151

- 8.1 Overview of Photosynthesis 151
- 8.2 Reactions That Harness Light Energy 154
Genomes and Proteomes: The Cytochrome Complexes of Mitochondria and Chloroplasts Have Evolutionarily Related Proteins in Common 161
- 8.3 Calvin Cycle 162
Feature Investigation: The Calvin Cycle Was Determined by Isotope Labeling Methods 164
- 8.4 Variations in Photosynthesis 166

Chapter 9

Cell Communication and Regulation of the Cell Cycle 171

- 9.1 General Features of Cell Communication 171
- 9.2 Cellular Receptors 174

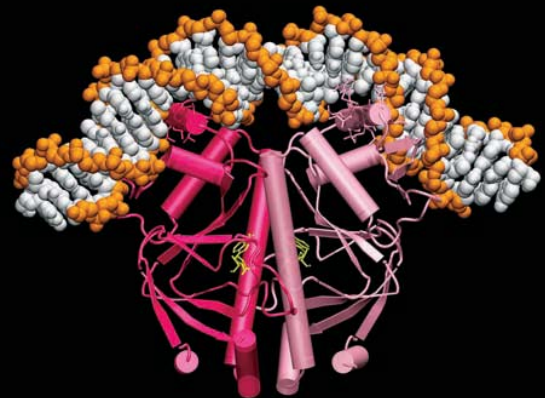

- 9.3 Signal Transduction and the Cellular Response 178
Genomes and Proteomes: A Cell's Response to Signaling Molecules Depends on the Proteins It Makes 184
- 9.4 Regulation of the Cell Cycle 184
Feature Investigation: Masui and Markert's Study of Oocyte Maturation Led to the Identification of Cyclin and Cyclin-Dependent Kinase 188

Chapter 10

Multicellularity 191

- 10.1 Extracellular Matrix 191
Genomes and Proteomes: Collagens Are a Family of Proteins That Give Animal Cells a Variety of ECM Properties 193
- 10.2 Cell Junctions 196
Feature Investigation: Loewenstein and Colleagues Followed the Transfer of Fluorescent Dyes to Determine the Size of Gap-Junction Channels 200
- 10.3 Tissues 202

UNIT III Genetics

Chapter 11

Nucleic Acid Structure and DNA Replication 209

- 11.1 Biochemical Identification of the Genetic Material 209
Feature Investigation: Avery, MacLeod, and McCarty Used Purification Methods to Reveal That DNA Is the Genetic Material 211
- 11.2 Nucleic Acid Structure 213

11.3 DNA Replication 219

Genomes and Proteomes: DNA Polymerases Are a Family of Enzymes with Specialized Functions 225

Chapter 12

Gene Expression at the Molecular Level 231

12.1 Overview of Gene Expression 231

12.2 Transcription 234

12.3 RNA Processing in Eukaryotes 238

12.4 Translation and the Genetic Code 241

Feature Investigation: Nirenberg and Leder Found That RNA Triplets Can Promote the Binding of tRNA to Ribosomes 245

12.5 The Machinery of Translation 245

Genomes and Proteomes: Comparisons of Small Subunit rRNAs Among Different Species Provide a Basis for Establishing Evolutionary Relationships 249

12.6 The Stages of Translation 249

Chapter 13

Gene Regulation 255

13.1 Overview of Gene Regulation 255

13.2 Regulation of Transcription in Bacteria 258

Feature Investigation: Jacob, Monod, and Pardee Studied a Constitutive Bacterial Mutant to Determine the Function of the lac Repressor 262

13.3 Regulation of Transcription in Eukaryotes 267

13.4 Regulation of RNA Processing and Translation in Eukaryotes 272

Genomes and Proteomes: Increases in Biological Complexity Are Correlated with Greater Sizes of Genomes and Proteomes 273

Chapter 14

Mutation, DNA Repair, and Cancer 277

14.1 Mutation 277

Feature Investigation: The Lederbergs Used Replica Plating to Show That Mutations Are Random Events 280

14.2 DNA Repair 285

14.3 Cancer 288

Genomes and Proteomes: Mutations in Approximately 300 Human Genes May Promote Cancer 296

Chapter 15

Eukaryotic Chromosomes, Mitosis, and Meiosis 299

15.1 Molecular Structure of Eukaryotic Chromosomes 299

Feature Investigation: Noll Confirmed Kornberg's Beads-on-a-String Model by Digestion of the Linker Region 300

Genomes and Proteomes: The Histone Code Controls Chromatin Compaction 305

15.2 Mitotic Cell Division 306

15.3 Meiosis and Sexual Reproduction 312

15.4 Variation in Chromosome Structure and Number 318

Chapter 16

Simple Patterns of Inheritance 325

16.1 Mendel's Laws and the Chromosome Theory of Inheritance 325

16.2 Sex Chromosomes and X-Linked Inheritance Patterns 337

Feature Investigation: Morgan's Experiments Showed a Correlation Between a Genetic Trait and the Inheritance of a Sex Chromosome in *Drosophila* 339

16.3 Variations in Inheritance Patterns and Their Molecular Basis 341

Genomes and Proteomes: Single-Gene Mutations Cause Many Inherited Diseases and Have Pleiotropic Effects 342

Chapter 17

Complex Patterns of Inheritance 349

17.1 Gene Interactions 349

17.2 Genes on the Same Chromosome: Linkage, Recombination, and Mapping 352

Bateson and Punnett's Crosses of Sweet Peas Showed That Genes Do Not Always Assort Independently 353

Genomes and Proteomes: Recombination Frequencies Provide a Method for Mapping Genes Along Chromosomes 356

17.3 Extranuclear Inheritance: Organelle Genomes 357

17.4 X Inactivation, Genomic Imprinting, and Maternal Effect 359

Chapter 18

Genetics of Bacteria and Viruses 367

18.1 Bacterial Genetics 367

Feature Investigation: Lederberg and Tatum's Work with *E. coli* Demonstrated Genetic Transfer Between Bacteria and Led to the Discovery of Conjugation 372

Genomes and Proteomes: Horizontal Gene Transfer Is the Transfer of Genes Between Different Species 375

18.2 Viral Genetics, Viroids, and Prions 376

Chapter 19

Developmental Genetics 391

19.1 General Themes in Development 391

19.2 Development in Animals 396

Genomes and Proteomes: A Homologous Group of Homeotic Genes Is Found in All Animals 402

Feature Investigation: Davis, Weintraub, and Lasser Identified Genes Encoding Transcription Factors That Promote Muscle Cell Differentiation 406

19.3 Development in Plants 408

Chapter 20

Genetic Technology 413

20.1 Gene Cloning 413

Genomes and Proteomes: Blotting Methods Can Identify Gene Families 418

20.2 Genomics and Proteomics 421

20.3 Biotechnology 427

Feature Investigation: Blaese and Colleagues Performed the First Gene Therapy to Treat ADA Deficiency 433

Chapter 21

Genomes, Proteomes, and Bioinformatics 437

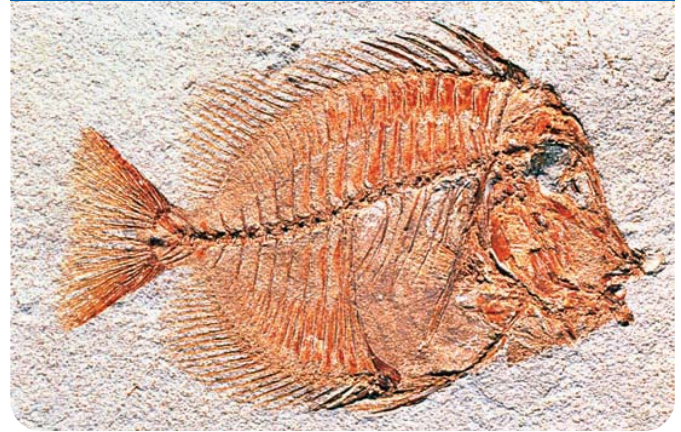

21.1 Genome Sizes and Composition 437

Feature Investigation: Venter, Smith, and Colleagues Sequenced the First Complete Genome, That of *Haemophilus influenzae* 439

21.2 Proteomes 446

21.3 Bioinformatics 449

UNIT IV Evolution

Chapter 22

Origin and History of Life 458

22.1 Origin of Life on Earth 458

Feature Investigation: Bartel and Szostak Demonstrated Chemical Selection in the Laboratory 463

22.2 History of Life on Earth 465

Genomes and Proteomes: The Origin of Eukaryotic Cells During the Proterozoic Eon Involved a Union Between Bacterial and Archaeal Cell 471

Chapter 23

An Introduction to Evolution 479

23.1 The Theory of Evolution 480

23.2 Observations of Evolutionary Change 483

Feature Investigation: The Grants Have Observed Natural Selection in Galápagos Finches 490

23.3 The Molecular Processes That Underlie Evolution 493

Genomes and Proteomes: New Genes in Eukaryotes Have Evolved via Exon Shuffling 494

Chapter 24

Population Genetics 499

24.1 Genes in Populations 499

Genomes and Proteomes: Genes in Natural Populations Are Usually Polymorphic 500

24.2 Evolutionary Mechanisms and Their Effects on Populations 502

Feature Investigation: Seehausen and van Alphen Found That Male Coloration in African Cichlids Is Subject to Female Choice 508

Chapter 25

Origin of Species 517

- 25.1 Species Concepts 517
- 25.2 Mechanisms of Speciation 522
 - Feature Investigation:** Podos Found That an Adaptation to Feeding Also May Have Promoted Reproductive Isolation in Finches 524
- 25.3 The Pace of Speciation 528
- 25.4 Evo-Devo: Evolutionary Developmental Biology and the Form of New Species 529
 - Genomes and Proteomes:** The Study of the *Pax6* Gene Indicates That Different Types of Eyes Evolved from a Simpler Form 533

Chapter 26

Taxonomy and Systematics 537

- 26.1 Taxonomy 538
- 26.2 Systematics 544
 - Feature Investigation:** Cooper and Colleagues Extracted DNA from Extinct Flightless Birds and Then Compared It with DNA from Modern Species to Reconstruct Their Phylogeny 552
 - Genomes and Proteomes:** Due to Horizontal Gene Transfer, the Tree of Life Is Really a “Web of Life” 555

UNIT V Diversity

Chapter 27

The Bacteria and Archaea 559

- 27.1 Diversity and Evolution 559
- 27.2 Structure and Motility 564
- 27.3 Reproduction 569
- 27.4 Nutrition and Metabolism 571

Genomes and Proteomes: Gene Expression Studies Revealed How Cyanobacteria Fix Nitrogen in Hot Springs 572

- 27.5 Ecological Roles and Biotechnology Applications 573
 - Feature Investigation:** The Daly Experiments Revealed How *Deinococcus radiodurans* Avoids Radiation Damage 575

Chapter 28

Protists 579

- 28.1 An Introduction to Protists 579
- 28.2 Evolution and Relationships 583
- 28.3 Nutritional and Defensive Adaptations 589
 - Feature Investigation:** Burkholder and Colleagues Demonstrated That Strains of the Dinoflagellate Genus *Pfiesteria* Are Toxic to Mammalian Cells 591
- 28.4 Reproductive Adaptations 593
 - Genomes and Proteomes:** Genomic Information Aids in Combating Protistan Parasites 598

Chapter 29

The Kingdom Fungi 601

- 29.1 Distinctive Features of Fungi 601
- 29.2 Fungal Sexual and Asexual Reproduction 605
- 29.3 Fungal Ecology and Biotechnology 607
 - Feature Investigation:** Piercey-Normore and DePriest Discovered That Some Lichens Readily Change Partners 611
- 29.4 Evolution and Diversity of Fungi 613
 - Genomes and Proteomes:** Yeast Is Used as a Model System in Genomics, Proteomics, and Metabolomics 617

Chapter 30

Plants and the Conquest of Land 621

- 30.1 Ancestry and Diversity of Modern Plants 621
- 30.2 An Evolutionary History of Land Plants 631
 - Genomes and Proteomes:** The Number of Genes That Controls Cellulose Production Increased During Plant Evolutionary History 633
- 30.3 The Origin and Evolutionary Importance of the Plant Embryo 636
 - Feature Investigation:** Browning and Gunning Demonstrated That Placental Transfer Tissues Increase the Rate at Which Organic Molecules Move from Gametophytes to Sporophytes 637
- 30.4 The Origin and Evolutionary Importance of Leaves and Seeds 639

Chapter 31

The Diversity of Modern Gymnosperms and Angiosperms 645

- 31.1 The Diversity of Modern Gymnosperms 645
- 31.2 The Diversity of Modern Angiosperms 653
 - Feature Investigation:** Hillig and Mahlberg Used Secondary Metabolites to Explore Species Diversification in the Genus *Cannabis* 660
- 31.3 The Role of Coevolution in Angiosperm Diversification 661
- 31.4 Human Influences on Angiosperm Diversification 663
 - Genomes and Proteomes:** DNA Barcodes Help in Identifying and Cataloging Plants 664

Chapter 32

An Introduction to Animal Diversity 667

- 32.1 Characteristics of Animals 667
- 32.2 Traditional Classification of Animals 668
 - Genomes and Proteomes:** Changes in *Hox* Gene Expression Control Body Segment Specialization 673
- 32.3 Molecular Views of Animal Diversity 673
 - Feature Investigation:** Aguinaldo and Colleagues Used 18S rDNA to Analyze the Taxonomic Relationships of Arthropods to Other Taxa 675

Chapter 33

The Invertebrates 681

- 33.1 Parazoa: Sponges, the First Multicellular Animals 681
- 33.2 Radiata: Jellyfish, Radially Symmetrical Animals 683
- 33.3 Lophotrochozoa: The Flatworms, Rotifers, Lophophorates, Mollusks, and Annelids 685
 - Feature Investigation:** Fiorito and Scotto's Experiments Showed Invertebrates Can Exhibit Sophisticated Observational Learning Behavior 693
- 33.4 Ecdysozoa: The Nematodes and Arthropods 696
 - Genomes and Proteomes:** Insect Diversity May Be Explained by the Appearance of the Angiosperms 701
- 33.5 Deuterostomia: The Echinoderms and Chordates 706

Chapter 34

The Vertebrates 713

- 34.1 The Craniates 713
- 34.2 Characteristics of Vertebrates 715
- 34.3 The Fishes 716

- 34.4 Amphibia: The First Tetrapods 721

Feature Investigation: Davis, Capecchi, and Colleagues Showed a Genetic-Developmental Explanation for Limb Length in Tetrapods 723

- 34.5 Amniotes: The Appearance of Reptiles 725

- 34.6 Birds 729

Genomes and Proteomes: The Differentiation of Scales, Feathers, and Fur May Be Caused by Simple Changes in Developmental Pathways 729

- 34.7 Mammals 732

UNIT VI Plants

Chapter 35

An Introduction to Flowering Plants 743

- 35.1 From Seed to Seed—The Life of a Flowering Plant 743
- 35.2 How Plants Grow and Develop 746
 - Genomes and Proteomes:** Plant Shoot Apical Meristem Size Is Genetically Controlled 749
- 35.3 The Shoot System: Stem and Leaf Adaptations 751
 - Feature Investigation:** Elle and Associates Investigated the Cost to *Datura wrightii* of Producing Sticky Leaf Trichomes 754
- 35.4 Root System Adaptations 758

Chapter 36

Flowering Plants: Behavior 763

- 36.1 Plant Behavioral Responses 763
- 36.2 Plant Hormones 765
 - Feature Investigation:** Experiments Performed by Went and Briggs Revealed the Role of Auxin in Phototropism 768
 - Genomes and Proteomes:** Genomic Analyses Support the Cholodny-Went Hypothesis 771
- 36.3 Plant Responses to Environmental Stimuli 773

Chapter 37

Flowering Plants: Nutrition 783

- 37.1 Plant Nutritional Requirements 783
- 37.2 The Role of Soil in Plant Nutrition 788
 - Feature Investigation:** Hammond and Colleagues Engineered “Smart Plants” That Can Communicate Their Phosphate Needs 793
- 37.3 Biological Sources of Plant Nutrients 795
 - Genomes and Proteomes:** Early Stages in the Development of Mycorrhizae and Legume-Rhizobia Associations Involve Similar Genes and Proteins 798

Chapter 38

Flowering Plants: Transport 803

- 38.1 Movement of Minerals, Water, and Organic Compounds at the Cellular Level 803
- 38.2 Tissue-Level Transport 808
- 38.3 Long-Distance Transport 810
 - Feature Investigation:** Holbrook and Associates Revealed the Dynamic Role of Xylem in Transport 813
 - Genomes and Proteomes:** Microarray Studies of Gene Transcription Reveal Xylem- and Phloem-Specific Genes 821

Chapter 39

Flowering Plants: Reproduction and Development 825

- 39.1 An Overview of Flowering Plant Reproduction 825
- 39.2 Flower Production, Structure, and Development 828
 - Genomes and Proteomes:** Environmental Signals and Developmental Genes Control Flower Production 829
- 39.3 Male and Female Gametophytes and Double Fertilization 834
 - Feature Investigation:** Kranz and Lörz First Achieved Plant in Vitro Fertilization 838
- 39.4 Embryo, Seed, Fruit, and Seedling Development 839
- 39.5 Asexual Reproduction in Flowering Plants 843

UNIT VII Animals

Chapter 40

Introduction to Animal Form and Function 847

- 40.1 Organization of Animal Bodies 847
 - Genomes and Proteomes:** Organ Development and Function Are Controlled by Homeotic Genes 852
- 40.2 The Relationship Between Structure and Function 854
- 40.3 Homeostasis 856
 - Feature Investigation:** Pavlov Demonstrated the Relationship Between Learning and Feedforward Processes 860

Chapter 41

Nutrition, Digestion, and Absorption 865

- 41.1 Animal Nutrition 865
- 41.2 Ways in Which Animals Obtain Nutrients 869
- 41.3 Principles of Digestion and Absorption of Food 872
- 41.4 Overview of Vertebrate Digestive Systems 873
- 41.5 Mechanisms of Digestion and Absorption in Vertebrates 878
 - Genomes and Proteomes:** Genetics Explains Lactose Intolerance 879
- 41.6 Regulation of Digestion 883
 - Feature Investigation:** Starling and Bayliss Discovered a Mechanism by Which the Small Intestine Communicates with the Pancreas 883
- 41.7 Impact on Public Health 886

Chapter 42

Control of Energy Balance, Metabolic Rate, and Body Temperature 889

- 42.1 Nutrient Utilization and Storage 889
- 42.2 Regulation of the Absorptive and Postabsorptive States 892
 - Genomes and Proteomes:** GLUT Proteins Transport Glucose in Animal Cells 892
- 42.3 Energy Expenditure 894
 - Feature Investigation:** Coleman Revealed a Satiety Factor in Mammals 898
- 42.4 Regulation of Body Temperature 900
- 42.5 Impact on Public Health 906

Chapter 43

Neuroscience I: Cells of the Nervous System 911

- 43.1 Cellular Components of Nervous Systems 911
- 43.2 Electrical Properties of Neurons 914
- 43.3 Communication Between Neurons 917
 - Feature Investigation:** Loewi Discovered Acetylcholine 925
 - Genomes and Proteomes:** Neurotransmitter Receptors Have Varied Subunit Compositions 927
- 43.4 Impact on Public Health 929

Chapter 44

Neuroscience II: Evolution and Function of the Brain and Nervous Systems 933

- 44.1 The Evolution and Development of Nervous Systems 933
- 44.2 Structure and Function of the Human Nervous System 937
 - Genomes and Proteomes:** Several Genes Have Been Important in the Evolution of the Cerebral Cortex 943
- 44.3 Cellular Basis of Learning and Memory 943
 - Feature Investigation:** Gaser and Schlaug Showed That the Sizes of Certain Brain Structures Differ Between Musicians and Nonmusicians 946
- 44.4 Impact on Public Health 948

Chapter 45

Neuroscience III: Sensory Systems 951

- 45.1 An Introduction to Sensory Receptors 951
- 45.2 Mechanoreception 953
- 45.3 Thermoreception and Nociception 959
- 45.4 Electromagnetic Sensing 960
- 45.5 Photoreception 961
 - Genomes and Proteomes:** Mutations in Cone Pigments Cause Color Blindness 964
- 45.6 Chemoreception: Smell and Taste 967
 - Feature Investigation:** Buck and Axel Discovered a Family of Olfactory Receptor Proteins That Bind Specific Odor Molecules 968
- 45.7 Impact on Public Health 970

Chapter 46

The Muscular-Skeletal System and Locomotion 975

- 46.1 Types of Animal Skeletons 975
- 46.2 The Vertebrate Skeleton 977
- 46.3 Skeletal Muscle Structure and the Mechanism of Force Generation 978
 - Genomes and Proteomes:** Did an Ancient Mutation in Myosin Play a Role in the Development of the Human Brain? 981
- 46.4 Skeletal Muscle Function 985
 - Feature Investigation:** Evans and Colleagues Activated a Gene to Produce “Marathon Mice” 987
- 46.5 Animal Locomotion 989
- 46.6 Impact on Public Health 991

Chapter 47

Circulatory Systems 995

- 47.1 Gastrovascular Cavities 995
- 47.2 Open Circulatory Systems 996
- 47.3 Closed Circulatory Systems 996
 - Genomes and Proteomes:** Hemophilia Is a Genetic Defect in Clotting Factors 1001
- 47.4 Forces That Determine Blood Pressure and Flow 1008

Feature Investigation: Furchgott Discovered a Vasodilatory Factor Produced by Endothelial Cells 1009

- 47.5 Adaptive Functions of Closed Circulatory Systems 1012
- 47.6 Impact on Public Health 1013

Chapter 48

Respiratory Systems 1017

- 48.1 Physical Properties of Gases 1017
- 48.2 Types of Respiratory Organs 1019
- 48.3 Design and Function of Mammalian and Avian Respiratory Systems 1024
 - Feature Investigation:** Schmidt-Nielsen Mapped Airflow in the Avian Respiratory System 1028
- 48.4 Control of Ventilation in Mammalian Lungs 1029
- 48.5 Mechanisms of Oxygen Transport in Blood 1031
 - Genomes and Proteomes:** Hemoglobin Evolved over 500 Million Years Ago 1033
- 48.6 Adaptations to Extreme Conditions 1034
- 48.7 Impact on Public Health 1035

Chapter 49

Excretory Systems and Salt and Water Balance 1039

- 49.1 Principles of Homeostasis of Internal Fluids 1039
 - Feature Investigation:** Cade and Colleagues at the University of Florida Discovered Why Athletes' Performance Wanes on Hot Days 1044
- 49.2 A Survey of Excretory Organs 1046
- 49.3 Structure and Function of the Mammalian Kidney 1051
 - Genomes and Proteomes:** Agre and Colleagues Discovered the Mechanism of Water Movement Across Biological Membranes 1055
- 49.4 Impact on Public Health 1056

Chapter 50

Endocrine Systems 1061

- 50.1 Mechanisms of Hormone Action and Control 1061
 - Genomes and Proteomes:** Hormones and Receptors Evolved as Tightly Integrated Molecular Systems 1064
- 50.2 Links Between the Endocrine and Nervous Systems 1067
- 50.3 Control of Metabolism and Energy Balance by Hormones 1069

Feature Investigation: Banting, Best, MacLeod, and Collip Isolated Active Insulin for the First Time 1073

- 50.4 Hormonal Control of Mineral Balance 1076
- 50.5 Hormonal Control of Growth and Differentiation 1078
- 50.6 Hormonal Control of Reproduction 1080
- 50.7 Hormonal Responses to Stress 1081
- 50.8 Impact on Public Health 1083

Chapter 51

Animal Reproduction 1087

- 51.1 Asexual Reproduction 1087
- 51.2 Sexual Reproduction 1088
 - Feature Investigation:** Paland and Lynch Provided Evidence That Sexual Reproduction May Promote the Elimination of Harmful Mutations in Populations 1089
- 51.3 Mammalian Reproductive Structure and Function 1094
- 51.4 Pregnancy in Mammals 1099
 - Genomes and Proteomes:** The Evolution of the Globin Gene Family Has Been Important for Internal Gestation in Mammals 1102
- 51.5 Timing of Reproduction with Favorable Times of Year 1103
- 51.6 Impact on Public Health 1104

Chapter 52

Animal Development 1109

- 52.1 Stages of Embryonic Development 1109
- 52.2 Control of Cell Differentiation and Morphogenesis During Animal Development 1118
 - Feature Investigation:** Richard Harland and Coworkers Identified Genes Expressed Specifically in the Organizer 1121
 - Genomes and Proteomes:** Protein Molecules Called Frzb Can Inhibit Developmental Pathways Activated by Other Morphogens 1123
- 52.3 Impact on Public Health 1124

Chapter 53

Defense Mechanisms of the Body 1127

- 53.1 Types of Pathogens 1127
- 53.2 Nonspecific (Innate) Immunity 1128
- 53.3 Specific (Acquired) Immunity 1131

Genomes and Proteomes: Recombination and Hypermutation Produce an Enormous Number of Different Immunoglobulin Proteins 1135

Feature Investigation: Traniello and Colleagues Demonstrated That Social Insects May Develop “Social Immunity” 1141

53.4 Impact on Public Health 1143

UNIT VIII Ecology

Chapter 54

An Introduction to Ecology and Biomes 1147

54.1 The Scale of Ecology 1148

Feature Investigation: Callaway and Aschehoug’s Experiments Show That the Secretion of Chemicals Gives Exotic Plants a Competitive Edge over Native Species 1149

54.2 The Environment’s Impact on the Distribution of Organisms 1152

Genomes and Proteomes: The Ups and Downs of Temperature Tolerance 1156

54.3 Climate and Its Relationship to Biological Communities 1160

Chapter 55

Behavioral Ecology 1177

55.1 The Impact of Genetics and Learning on Behavior 1177

Genomes and Proteomes: Some Behavior Results from Simple Genetic Influences 1178

55.2 Local Movement and Long-Range Migration 1181

Feature Investigation: Tinbergen’s Experiments Show Digger Wasps Use Landmarks to Find Their Nests 1182

55.3 Foraging Behavior 1185

55.4 Communication 1186

55.5 Living in Groups 1188

55.6 Altruism 1189

55.7 Mating Systems 1193

Chapter 56

Population Ecology 1199

56.1 Understanding Populations 1199

Feature Investigation: Murie’s Collections of Dall Mountain Sheep Skulls Permitted Accurate Life Tables to Be Constructed 1204

56.2 How Populations Grow 1207

Genomes and Proteomes: Hexaploidy Increases the Growth of Coast Redwood Trees 1213

56.3 Human Population Growth 1214

Chapter 57

Species Interactions 1225

57.1 Competition 1225

Feature Investigation: Connell’s Experiments with Barnacle Species Show That One Species Can Competitively Exclude Another in a Natural Setting 1221

57.2 Predation, Herbivory, and Parasitism 1226

Genome and Proteomes: The Fight Against Plant Diseases 1234

57.3 Mutualism and Commensalism 1234

57.4 Conceptual Models 1236

Chapter 58

Community Ecology 1241

58.1 Differing Views of Communities 1241

58.2 Patterns of Species Richness 1242

58.3 Calculating Species Diversity 1245

Genomes and Proteomes: Metagenomics and Community Diversity 1246

58.4 Species Richness and Community Stability 1248

58.5 Succession: Community Change 1250

58.6 Island Biogeography 1253

Feature Investigation: Wilson and Simberloff’s Experiments Tested the Predictions of Island Biogeography Theory 1256

Chapter 59

Ecosystems Ecology 1261

- 59.1 Food Webs and Energy Flow 1262
- 59.2 Energy Production in Ecosystems 1267
- 59.3 Biogeochemical Cycles 1270
 - Genomes and Proteomes:** Pollution Can Cause Heritable Mutations 1272
 - Feature Investigation:** Stiling and Drake's Experiments with Elevated CO₂ Show an Increase in Plant Growth but a Decrease in Herbivory 1273

Chapter 60

Conservation Biology and Biodiversity 1281

- 60.1 Why Conserve Biodiversity? 1282
 - Feature Investigation:** Ecotron Experiments Showed the Relationship Between Biodiversity and Ecosystem Function 1284

- 60.2 The Causes of Extinction and Loss of Biodiversity 1286
