

# CONTENTS

*Preface* xv

## CHAPTER 1

### INTRODUCTION 1

#### 1.1 GIS 2

- 1.1.1 Components of a GIS 3
- 1.1.2 A Brief History of GIS 3
- 1.1.3 GIS Software Products 4

#### 1.2 Applications of GIS 4

- Box 1.1 A List of GIS Software Producers and Their Main Products 5*
- Box 1.2 Precision Farming 6*
- Box 1.3 What Happened to Dodgeball? 7*
- Box 1.4 Smartphones 7*

#### 1.3 Elements of GIS 7

- 1.3.1 Data Model 7
- 1.3.2 Data Acquisition 9
- 1.3.3 Attribute Data Management 10
- 1.3.4 Data Display 10
- 1.3.5 Data Exploration 10
- 1.3.6 Data Analysis 10

#### 1.4 Web Mapping 11

- 1.4.1 Online Mapping 11
- 1.4.2 Collaborative Web Mapping 12
- 1.4.3 Volunteered Geographic Information 12
- 1.4.4 Implications of Web Applications 13

#### 1.5 Organization of This Book 13

#### 1.6 Concepts and Practice 13

#### Key Concepts and Terms 14

#### Review Questions 14

#### Applications: Introduction 15

##### Task 1 Introduction to ArcCatalog 15

##### Task 2 Introduction to ArcMap 16

##### Challenge Task 18

#### References 18

## CHAPTER 2

### COORDINATE SYSTEMS 20

#### 2.1 Geographic Coordinate System 21

##### 2.1.1 Approximation of the Earth 22

##### 2.1.2 Datum 23

*Box 2.1 Datum Shift in Australia and New Zealand 23*

#### 2.2 Map Projections 25

*Box 2.2 How to Measure Distances on the Earth's Surface 25*

##### 2.2.1 Types of Map Projections 26

##### 2.2.2 Map Projection Parameters 27

#### 2.3 Commonly Used Map Projections 29

##### 2.3.1 Transverse Mercator 29

##### 2.3.2 Lambert Conformal Conic 30

##### 2.3.3 Albers Equal-Area Conic 30

##### 2.3.4 Equidistant Conic 30

##### 2.3.5 Web Mercator 31

2.4 Projected Coordinate Systems	31
<i>Box 2.3 Map Scale</i>	31
2.4.1 The Universal Transverse Mercator (UTM) Grid System	32
2.4.2 The Universal Polar Stereographic (UPS) Grid System	33
2.4.3 The State Plane Coordinate (SPC) System	33
2.4.4 The Public Land Survey System (PLSS)	34
2.5 Working with Coordinate Systems in GIS	35
2.5.1 Projection File	35
2.5.2 Predefined Coordinate Systems	35
<i>Box 2.4 A Projection File Example</i>	36
2.5.3 On-the-Fly Projection	36
<i>Box 2.5 GIS Tools for Working With Coordinate Systems</i>	37
Key Concepts and Terms	37
Review Questions	39
Applications: Coordinate Systems	40
Task 1 Project a Shapefile from a Geographic to a Projected Coordinate System	40
Task 2 Import a Coordinate System	41
Task 3 Project a Shapefile by Using a Predefined Coordinate System	41
Task 4 Convert from One Coordinate System to Another	42
Challenge Task	42
References	43

## CHAPTER 3

### VECTOR DATA MODEL 44

3.1 Representation of Simple Features	45
<i>Box 3.1 KML, GPX, and LAS</i>	45
<i>Box 3.2 Geodatabase, Shapefile, and Coverage for Esri Software</i>	46
3.2 Topology	46
3.2.1 TIGER	47
3.2.2 Importance of Topology	47
<i>Box 3.3 Adjacency and Incidence</i>	48
<i>Box 3.4 Topology or No Topology</i>	49
3.3 Georelational Data Model	50
3.3.1 The Coverage	50
3.3.2 Coverage Data Structure	50
3.3.3 Nontopological Vector Data	51

3.4 Object-Based Data Model	53
3.4.1 Classes and Class Relationships	53
3.4.2 Interface	54
3.4.3 The Geodatabase	54
<i>Box 3.5 ArcObjects and ArcGIS</i>	55
3.4.4 Topology Rules	55
3.4.5 Advantages of the Geodatabase	56
<i>Box 3.6 NHDinGEO</i>	57
3.5 Representation of Composite Features	57
3.5.1 TINs	58
3.5.2 Regions	58
3.5.3 Routes	59
Key Concepts and Terms	61
Review Questions	62
Applications: Vector Data Model	63
Task 1 Examine the Data File Structure of Coverage and Shapefile	63
Task 2 Create File Geodatabase, Feature Dataset, and Feature Class	64
Task 3 Convert a Shapefile to a Personal Geodatabase Feature Class	65
Task 4 Examine Polylines with Measures	65
Task 5 View Regions and Routes	66
Task 6 View TIN	66
Challenge Task	66
References	67

## CHAPTER 4

### RASTER DATA MODEL 68

4.1 Elements of the Raster Data Model	69
4.1.1 Cell Value	70
4.1.2 Cell Size	70
<i>Box 4.1 Rules in Determining a Categorical Cell Value</i>	70
4.1.3 Cell Depth	71
4.1.4 Raster Bands	71
4.1.5 Spatial Reference	71
4.2 Types of Raster Data	72
4.2.1 Satellite Imagery	72
4.2.2 Digital Elevation Models (DEMs)	73
4.2.3 USGS DEMs	75
4.2.4 Global DEMs	75
4.2.5 Digital Orthophotos	75
4.2.6 Land Cover Data	76
4.2.7 Bi-Level Scanned Files	76

4.2.8	Digital Raster Graphics (DRGs)	77
4.2.9	Graphic Files	77
4.2.10	GIS Software-Specific Raster Data	77
4.3	Raster Data Structure	77
4.3.1	Cell-by-Cell Encoding	78
4.3.2	Run-Length Encoding	78
4.3.3	Quad Tree	79
	<i>Box 4.2 A Header File Example</i>	80
4.3.4	Header File	80
4.4	Raster Data Compression	81
	<i>Box 4.3 A Simple Wavelet Example: The Haar Wavelet</i>	82
4.5	Raster Data File Formats	82
4.6	Data Conversion and Integration	82
4.6.1	Rasterization	82
4.6.2	Vectorization	83
4.6.3	Integration of Raster and Vector Data	83
	<i>Box 4.4 Linking Vector Data with Images</i>	84
	<i>Box 4.5 Digital Earth</i>	84
	Key Concepts and Terms	85
	Review Questions	86
	Applications: Raster Data Model	86
	Task 1 View and Import DEM Data	87
	Task 2 View a Satellite Image in ArcMap	87
	Task 3 Convert Vector Data to Raster Data	87
	Challenge Task	88
	References	88

## CHAPTER 5

### GIS DATA ACQUISITION 91

5.1	Existing GIS Data	92
	<i>Box 5.1 Data.gov</i>	92
5.1.1	Geoportals	92
5.1.2	U.S. Geological Survey	93
5.1.3	U.S. Census Bureau	93
5.1.4	Natural Resources Conservation Service	94
5.1.5	Statewide Public Data: An Example	94
5.1.6	Metropolitan Public Data: An Example	94
5.1.7	County-Level Public Data: An Example	94
5.1.8	GIS Data from Private Companies	94

5.2	Metadata	94
	<i>Box 5.2 ISO Metadata Standards</i>	95
5.3	Conversion of Existing Data	95
5.3.1	Direct Translation	95
5.3.2	Neutral Format	96
	<i>Box 5.3 Difficulty with Neutral Format</i>	96
5.4	Creating New Data	97
5.4.1	Remotely Sensed Data	97
5.4.2	Field Data	98
	<i>Box 5.4 An Example of GPS Data</i>	99
	<i>Box 5.5 GPS Tracker</i>	99
5.4.3	Text Files with $x$ -, $y$ -Coordinates	100
	<i>Box 5.6 Positional Accuracy of GPS Units and GPS-Enabled Mobile Phones</i>	101
5.4.4	Digitizing Using a Digitizing Table	101
5.4.5	Scanning	102
5.4.6	On-Screen Digitizing	105
5.4.7	Importance of Source Maps	105
	Key Concepts and Terms	106
	Review Questions	107
	Applications: GIS Data Acquisition	108
	Task 1 Download USGS DEM from the Internet	108
	Task 2 Digitize On-Screen in ArcMap	108
	Task 3 Add XY Data in ArcMap	110
	Task 4 Download Census Bureau KML File and Display it in Google Earth	110
	Challenge Task	110
	References	111

## CHAPTER 6

### GEOMETRIC TRANSFORMATION 112

6.1	Geometric Transformation	113
6.1.1	Map-to-Map and Image-to-Map Transformation	113
6.1.2	Transformation Methods	113
6.1.3	Affine Transformation	114
6.1.4	Control Points	115
	<i>Box 6.1 Estimation of Transformation Coefficients</i>	116
6.2	Root Mean Square (RMS) Error	117
	<i>Box 6.2 Output from an Affine Transformation</i>	117
	<i>Box 6.3 RMS from an Affine Transformation</i>	118

- 6.3 Interpretation of RMS Errors on Digitized Maps 119
  - 6.4 Resampling of Pixel Values 120
    - 6.4.1 Resampling Methods 120
    - 6.4.2 Other Uses of Resampling 121
      - Box 6.4 Computation for Bilinear Interpolation* 121
      - Box 6.5 Pyramiding* 122
  - Key Concepts and Terms 122
  - Review Questions 122
  - Applications: Geometric Transformation 123
    - Task 1 Georeference and Rectify a Scanned Map 123
    - Task 2 Use ArcScan to Vectorize Raster Lines 124
    - Task 3 Perform Image-to-Map Transformation 125
    - Challenge Task 127
  - References 127
- ## CHAPTER 7
- ### SPATIAL DATA ACCURACY AND QUALITY 128
- 7.1 Location Errors 129
    - 7.1.1 Location Errors Using Secondary Data Sources 129
    - 7.1.2 Causes of Digitizing Errors 129
    - 7.1.3 Location Errors Using Primary Data Sources 130
  - 7.2 Spatial Data Accuracy Standards 130
  - 7.3 Topological Errors 131
    - Box 7.1 National Standard for Spatial Data Accuracy (NSSDA) Statistic* 131
    - 7.3.1 Topological Errors with Spatial Features 132
    - 7.3.2 Topological Errors Between Layers 133
      - Box 7.2 GIS Packages for Topological Editing* 134
  - 7.4 Topological Editing 134
    - 7.4.1 Topological Editing on Coverages 134
    - 7.4.2 Editing Using Map Topology 136
    - 7.4.3 Editing Using Topology Rules 136
      - Box 7.3 Cluster Tolerance* 137
  - 7.5 Nontopological Editing 137
    - 7.5.1 Editing Existing Features 137
    - 7.5.2 Creating Features from Existing Features 138
  - 7.6 Other Editing Operations 139
    - 7.6.1 Edgematching 139
    - 7.6.2 Line Simplification and Smoothing 140
  - Key Concepts and Terms 141
  - Review Questions 142
  - Applications: Spatial Data Accuracy and Quality 143
    - Task 1 Edit a Shapefile 143
    - Task 2 Use Cluster Tolerance to Fix Digitizing Errors Between Two Shapefiles 144
    - Task 3 Use Topology Rule to Fix Dangles 145
    - Task 4 Use Topology Rule to Ensure That Two Polygon Layers Cover Each Other 146
    - Challenge Task 147
  - References 148
- ## CHAPTER 8
- ### ATTRIBUTE DATA MANAGEMENT 149
- 8.1 Attribute Data in GIS 150
    - 8.1.1 Types of Attribute Tables 151
    - 8.1.2 Database Management 151
    - 8.1.3 Types of Attribute Data 152
      - Box 8.1 Spatial Database Management System* 152
      - Box 8.2 Selection of Numerical Data Type* 152
      - Box 8.3 What is BLOB?* 153
      - Box 8.4 Categorical and Numeric Data* 153
  - 8.2 The Relational Model 154
    - 8.2.1 SSURGO: A Relational Database Example 154
    - 8.2.2 Normalization 156
    - 8.2.3 Types of Relationships 157
  - 8.3 Joins, Relates, and Relationship Classes 160
    - 8.3.1 Joins 160
    - 8.3.2 Relates 160
    - 8.3.3 Relationship Classes 160
  - 8.4 Attribute Data Entry 161
    - 8.4.1 Field Definition 161
    - 8.4.2 Methods of Data Entry 161
    - 8.4.3 Attribute Data Verification 161
  - 8.5 Manipulation of Fields and Attribute Data 162
    - 8.5.1 Adding and Deleting Fields 162
    - 8.5.2 Classification of Attribute Data 162
    - 8.5.3 Computation of Attribute Data 162
  - Key Concepts and Terms 162

Review Questions 163

Applications: Attribute Data Management 164

    Task 1 Enter Attribute Data of a Geodatabase Feature Class 164

    Task 2 Join Tables 165

    Task 3 Relate Tables 165

    Task 4 Create New Attribute by Data Classification 166

    Task 5 Use Advanced Method for Attribute Data Classification 166

    Task 6 Create New Attribute by Data Computation 167

    Task 7 Create Relationship Class 167

    Challenge Task 168

References 168

## CHAPTER 9

### DATA DISPLAY AND CARTOGRAPHY 170

9.1 Cartographic Representation 172

    9.1.1 Spatial Features and Map Symbols 172

    9.1.2 Use of Color 173

*Box 9.1 Choice of Map Symbols in Google My Maps 173*

    9.1.3 Data Classification 174

    9.1.4 Generalization 175

9.2 Types of Quantitative Maps 176

*Box 9.2 Locating Dots on a Dot Map 178*

*Box 9.3 Mapping Derived and Absolute Values 178*

9.3 Typography 179

    9.3.1 Type Variations 179

    9.3.2 Selection of Type Variations 179

    9.3.3 Placement of Text in the Map Body 180

*Box 9.4 Options for Dynamic Labeling 181*

9.4 Map Design 183

    9.4.1 Layout 184

*Box 9.5 Better Mapping Campaign 184*

    9.4.2 Visual Hierarchy 186

9.5 Animated Maps 187

9.6 Map Production 188

*Box 9.6 Working with Soft-Copy Maps 189*

*Box 9.7 A Web Tool for Making Color Maps 190*

Key Concepts and Terms 190

Review Questions 192

Applications: Data Display and Cartography 192

    Task 1 Make a Choropleth Map 192

    Task 2 Use Graduated Symbols, Line Symbols, Highway Shield Symbols, and Text Symbols 195

    Task 3 Label Streams 198

    Challenge Task 199

References 199

## CHAPTER 10

### DATA EXPLORATION 201

10.1 Data Exploration 202

    10.1.1 Descriptive Statistics 202

*Box 10.1 Data Visualization 202*

    10.1.2 Graphs 203

*Box 10.2 Descriptive Statistics 203*

    10.1.3 Dynamic Graphics 207

10.2 Map-Based Data Manipulation 207

    10.2.1 Data Classification 207

    10.2.2 Spatial Aggregation 208

*Box 10.3 Geovisualization and Geovisual Analytics 208*

    10.2.3 Map Comparison 209

10.3 Attribute Data Query 210

    10.3.1 SQL (Structured Query Language) 210

*Box 10.4 SQL for Attribute Data Query 210*

    10.3.2 Query Expressions 211

    10.3.3 Type of Operation 212

    10.3.4 Examples of Query Operations 213

    10.3.5 Relational Database Query 213

10.4 Spatial Data Query 214

    10.4.1 Feature Selection by Cursor 214

    10.4.2 Feature Selection by Graphic 214

    10.4.3 Feature Selection by Spatial Relationship 215

    10.4.4 Combining Attribute and Spatial Data Queries 215

*Box 10.5 Expressions of Spatial Relationships 216*

10.5 Raster Data Query 216

    10.5.1 Query by Cell Value 216

    10.5.2 Query by Select Features 217

Key Concepts and Terms 217

Review Questions 218

Applications: Data Exploration 218

Task 1 Select Feature by Location	218
Task 2 Make Dynamic Chart	219
Task 3 Query Attribute Data from a Joint Attribute Table	220
Task 4 Query Attribute Data from a Relational Database	220
Task 5 Combine Spatial and Attribute Data Queries	221
Task 6 Query Raster Data	222
Challenge Task	222
References	223

## CHAPTER 11

### VECTOR DATA ANALYSIS 224

11.1 Buffering	225
11.1.1 Variations in Buffering	225
<i>Box 11.1 Riparian Buffer Width</i>	226
11.1.2 Applications of Buffering	227
11.2 Overlay	228
11.2.1 Feature Type and Overlay	228
<i>Box 11.2 Buffer Zones as Indicators of Positional Accuracy</i>	228
11.2.2 Overlay Methods	229
11.2.3 Overlay and Data Format	230
11.2.4 Slivers	231
11.2.5 Error Propagation in Overlay	232
11.2.6 Applications of Overlay	232
11.3 Distance Measurement	233
<i>Box 11.3 Error Propagation Models</i>	233
11.4 Pattern Analysis	234
11.4.1 Point Pattern Analysis	234
<i>Box 11.4 Distance Measures for Assessing Posi- tional Accuracy</i>	234
11.4.2 Moran's I for Measuring Spatial Autocorrelation	235
11.4.3 G-Statistic for Measuring High/Low Clustering	237
11.4.4 Applications of Pattern Analysis	238
11.5 Feature Manipulation	239
<i>Box 11.5 Detection of Drug Hotspots</i>	239
Key Concepts and Terms	242
Review Questions	243
Applications: Vector Data Analysis	243
Task 1 Perform Buffering and Overlay	244
Task 2 Overlay Multicomponent Polygons	245

Task 3 Measure Distances Between Points and Lines	245
Task 4 Compute General and Local G-Statistics	246
Task 5 Perform Select and Clip	246
Challenge Task	247
References	247

## CHAPTER 12

### RASTER DATA ANALYSIS 250

12.1 Data Analysis Environment	251
12.2 Local Operations	251
<i>Box 12.1 How to Make an Analysis Mask</i>	251
12.2.1 Local Operations with a Single Raster	252
12.2.2 Reclassification	252
12.2.3 Local Operations with Multiple Rasters	252
12.2.4 Applications of Local Operations	253
<i>Box 12.2 A Case Study of the RUSLE</i>	254
12.3 Neighborhood Operations	255
12.3.1 Neighborhood Statistics	255
12.3.2 Applications of Neighborhood Operations	255
<i>Box 12.3 More Examples of Neighborhood Operations</i>	257
12.4 Zonal Operations	257
12.4.1 Zonal Statistics	257
12.4.2 Applications of Zonal Operations	258
12.5 Physical Distance Measure Operations	258
<i>Box 12.4 The Importance of Zonal Operations</i>	259
12.5.1 Allocation and Direction	260
12.5.2 Applications of Physical Distance Measure Operations	260
12.6 Other Raster Data Operations	260
12.6.1 Raster Data Management	260
<i>Box 12.5 Limitations of Physical Distance Measures</i>	261
12.6.2 Raster Data Extraction	261
12.6.3 Raster Data Generalization	262
12.7 Map Algebra	262
12.8 Comparison of Vector- and Raster-Based Data Analysis	263
<i>Box 12.6 A Case for Raster-Based Overlay</i>	264
12.8.1 Overlay	263
12.8.2 Buffering	264

Key Concepts and Terms 264  
 Review Questions 265  
 Applications: Raster Data Analysis 265  
     Task 1 Perform a Local Operation 266  
     Task 2 Perform a Combine Operation 266  
     Task 3 Perform a Neighborhood Operation 266  
     Task 4 Perform a Zonal Operation 266  
     Task 5 Measure Physical Distances 267  
     Task 6 Perform Extract by Attributes and  
         by Mask 267  
     Challenge Task 268  
 References 268

## CHAPTER 13

### TERRAIN MAPPING AND ANALYSIS 270

13.1 Data for Terrain Mapping and Analysis 271  
     13.1.1 DEM 271  
     13.1.2 TIN 271  
         *Box 13.1 An Application Example of LiDAR  
         DEM 272*  
 13.2 Terrain Mapping 273  
     13.2.1 Contouring 273  
     13.2.2 Vertical Profiling 274  
     13.2.3 Hill Shading 274  
         *Box 13.2 The Pseudoscopic Effect 275*  
     13.2.4 Hypsometric Tinting 275  
     13.2.5 Perspective View 276  
         *Box 13.3 A Worked Example of Computing  
         Relative Radiance 276*  
 13.3 Slope and Aspect 278  
     13.3.1 Computing Algorithms for Slope and Aspect  
         Using Raster 279  
         *Box 13.4 Conversion of D to Aspect 280*  
     13.3.2 Computing Algorithms for Slope and Aspect  
         Using TIN 281  
         *Box 13.5 A Worked Example of Computing  
         Slope and Aspect Using Raster 281*  
     13.3.3 Factors Influencing Slope and Aspect  
         Measures 281  
         *Box 13.6 A Worked Example of Computing  
         Slope and Aspect Using TIN 282*  
 13.4 Surface Curvature 283  
 13.5 Raster Versus TIN 284  
     *Box 13.7 A Worked Example of Computing  
     Surface Curvature 284*

Key Concepts and Terms 285  
 Review Questions 286  
 Applications: Terrain Mapping and Analysis 286  
     Task 1 Use DEM for Terrain Mapping 287  
     Task 2 Derive Slope, Aspect,  
         and Curvature from DEM 288  
     Task 3 Build and Display a TIN 289  
     Challenge Task 290  
 References 291

## CHAPTER 14

### VIEWSHED AND WATERSHED ANALYSIS 293

14.1 Viewshed Analysis 294  
     14.1.1 Line-of-Sight Operation 294  
     14.1.2 Raster-Based Viewshed Analysis 295  
     14.1.3 TIN-Based Viewshed Analysis 295  
     14.1.4 Cumulative Viewshed 295  
     14.1.5 Accuracy of Viewshed Analysis 296  
         *Box 14.1 An Application Example of Cumulative  
         Viewshed 296*  
 14.2 Parameters of Viewshed Analysis 297  
     *Box 14.2 Tools for Selecting Viewpoints 297*  
 14.3 Applications of Viewshed Analysis 299  
 14.5 Watershed Analysis 300  
     14.4.1 Filled DEM 300  
     14.4.2 Flow Direction 300  
         *Box 14.3 Watershed Boundary Dataset (WBD) 300*  
     14.4.3 Flow Accumulation 301  
     14.4.4 Stream Network 301  
     14.4.5 Stream Links 302  
     14.4.6 Areawide Watersheds 302  
     14.4.7 Point-Based Watersheds 302  
         *Box 14.4 Snapping Pour Points 304*  
 14.5 Factors Influencing Watershed Analysis 304  
     14.5.1 DEM Resolution 305  
     14.5.2 Flow Direction Method 306  
     14.5.3 Flow Accumulation Threshold 306  
 14.6 Applications of Watershed Analysis 307  
 Key Concepts and Terms 308  
 Review Questions 308  
 Applications: Viewsheds and Watersheds 309  
     Task 1 Perform Viewshed Analysis 309  
     Task 2 Create a New Lookup Shapefile for  
         Viewshed Analysis 310

Task 3 Delineate Areawide Watersheds	311
Task 4 Derive Upstream Contributing Areas at Pour Points	312
Challenge Task	313
References	313

## CHAPTER 15

### SPATIAL INTERPOLATION 316

15.1 Elements of Spatial Interpolation	317
15.1.1 Control Points	317
15.1.2 Type of Spatial Interpolation	317
15.2 Global Methods	318
15.2.1 Trend Surface Models	318
<i>Box 15.1 A Worked Example of Trend Surface         Analysis</i>	319
15.2.2 Regression Models	320
15.3 Local Methods	320
15.3.1 Thiessen Polygons	321
15.3.2 Density Estimation	322
15.3.3 Inverse Distance Weighted Interpolation	323
<i>Box 15.2 A Worked Example of Kernel         Density Estimation</i>	324
<i>Box 15.3 A Worked Example of Inverse         Distance Weighted Estimation</i>	324
15.3.4 Thin-Plate Splines	324
15.4 Kriging	326
<i>Box 15.4 Radial Basis Functions</i>	326
15.4.1 Semivariogram	327
<i>Box 15.5 A Worked Example of Thin-Plate         Splines with Tension</i>	327
15.4.2 Models	329
15.4.3 Ordinary Kriging	330
15.4.4 Universal Kriging	332
<i>Box 15.6 A Worked Example of Ordinary         Kriging Estimation</i>	332
15.4.5 Other Kriging Methods	333
<i>Box 15.7 A Worked Example of Universal         Kriging Estimation</i>	334
15.5 Comparison of Spatial Interpolation Methods	335
Key Concepts and Terms	336
Review Questions	337
Applications: Spatial Interpolation	338

Task 1 Use Trend Surface Model for Interpolation	338
Task 2 Use Kernel Density Estimation Method	339
Task 3 Use IDW for Interpolation	340
Task 4 Use Ordinary Kriging for Interpolation	340
Task 5 Use Universal Kriging for Interpolation	342
Challenge Task	342

## CHAPTER 16

### GEOCODING AND DYNAMIC SEGMENTATION 345

16.1 Geocoding	346
16.1.1 Geocoding Reference Database	346
16.1.2 The Address Matching Process	346
<i>Box 16.1 Positional Accuracy of Road Networks         in TIGER/Line Files</i>	347
<i>Box 16.2 Map Reporter</i>	347
16.1.3 Address Matching Options	349
<i>Box 16.3 Scoring System for Geocoding</i>	349
16.1.4 Offset Plotting Options	349
16.1.5 Quality of Geocoding	350
16.2 Variations of Geocoding	350
16.3 Applications of Geocoding	351
<i>Box 16.4 Online Geocoding Services</i>	351
16.3.1 Location-Based Services	351
16.3.2 Business Applications	352
16.3.3 Wireless Emergency Services	352
16.3.4 Crime Mapping and Analysis	352
16.3.5 Public Health	352
16.4 Dynamic Segmentation	353
<i>Box 16.5 Linear Location Referencing     System</i>	353
16.4.1 Routes	353
<i>Box 16.6 Route Feature Classes</i>	354
16.4.2 Creating Routes	354
16.4.3 Events	356
16.4.4 Creating Event Tables	356
16.5 Applications of Dynamic Segmentation	357
16.5.1 Data Management	357
16.5.2 Data Display	358
16.5.3 Data Query	358
16.5.4 Data Analysis	358

Key Concepts and Terms 359  
 Review Questions 359  
 Applications: Geocoding and Dynamic  
 Segmentation 360  
     Task 1 Geocode Street Addresses 360  
     Task 2 Display and Query Routes  
         and Events 361  
     Task 3 Analyze Two Event Layers 362  
     Task 4 Create a Stream Route and Analyze Slope  
         Along the Route 362  
     Task 5 Locate Cities Along U.S. Interstate 5 363  
     Task 6 Check the Quality of TIGER/Line Files 364  
 Challenge Task 365  
 References 365

## CHAPTER 17

### LEAST-COST PATH ANALYSIS AND NETWORK ANALYSIS 367

17.1 Least-Cost Path  
 Analysis 368  
     17.1.1 Source Raster 368  
     17.1.2 Cost Raster 368  
         *Box 17.1 Cost Raster for a Site Analysis of  
         Pipelines 368*  
     17.1.3 Cost Distance Measures 369  
     17.1.4 Deriving the Least Accumulative Cost  
         Path 369  
         *Box 17.2 Derivation of the Least Accumulative  
         Cost Path 371*  
     17.1.5 Options for Least-Cost Path  
         Analysis 372  
 17.2 Applications of Least-Cost Path  
 Analysis 372  
 17.3 Network 373  
     17.3.1 Link and Link Impedance 373  
         *Box 17.3 Least-Cost Path Analysis for  
         Studies of Food Deserts 373*  
     17.3.2 Junction and Turn Impedance 374  
     17.3.3 One-Way or Closed Streets 374  
     17.3.4 Overpasses and Underpasses 374  
 17.4 Putting Together a Network 375  
     *Box 17.4 Network Dataset 375*  
     17.4.1 Gathering Linear Features 375  
     17.4.2 Editing and Building Network 375  
     17.4.3 Attributing the Network Features 376

17.5 Network Analysis 377  
     17.5.1 Shortest Path Analysis 377  
     17.5.2 Traveling Salesman Problem 378  
     17.5.3 Vehicle Routing Problem 378  
     17.5.4 Closest Facility 379  
     17.5.5 Allocation 379  
     17.5.6 Location–Allocation 380  
         *Box 17.5 Response Time to Fires 381*  
 Key Concepts and Terms 382  
 Review Questions 383  
 Applications: Path Analysis and Network  
 Applications 383  
     Task 1 Compute the Least Accumulative Cost  
         Distance 384  
     Task 2 Compute the Path Distance 384  
     Task 3 Run Shortest Path Analysis 385  
     Task 4 Build a Geodatabase Network  
         Dataset 386  
     Task 5 Find Closest Facility 387  
     Task 6 Find Service Area 388  
 Challenge Task 389  
 References 389

## CHAPTER 18

### GIS MODELS AND MODELING 391

18.1 Basic Elements of GIS Modeling 392  
     18.1.1 Classification of GIS Models 392  
     18.1.2 The Modeling Process 393  
     18.1.3 The Role of GIS in Modeling 393  
     18.1.4 Integration of GIS and Other Modeling  
         Programs 394  
         *Box 18.1 GIS and Location Modeling 394*  
 18.2 Binary Models 394  
     18.2.1 Vector-Based Method 395  
     18.2.2 Raster-Based Method 395  
     18.2.3 Applications of Binary Models 396  
         *Box 18.2 The Conservation Reserve  
         Program 396*  
 18.3 Index Models 397  
     18.3.1 The Weighted Linear  
         Combination Method 397  
     18.3.2 Other Index Methods 398  
     18.3.3 Applications of the Index Model 401  
         *Box 18.3 The Land Evaluation and Site  
         Assessment System 401*

18.4 Regression Models	402	Applications: GIS Models and Modeling	407
18.4.1 Linear Regression Models	402	Task 1 Build a Vector-Based Binary Model	407
18.4.2 Local Regression Models	403	Task 2 Build a Raster-Based Binary Model	408
18.4.3 Logistic Regression Models	403	Task 3 Build a Vector-Based Index Model	409
18.5 Process Models	404	Task 4 Build a Raster-Based Index Model	410
18.5.1 Revised Universal Soil Loss Equation	404	Challenge Task	411
18.5.2 Critical Rainfall Model	405	References	411
Key Concepts and Terms	406	<b>Index</b>	415
Review Questions	407
