

# Installing MegaStat with Mac Excel 2011

This version of MegaStat will work only with Excel 2011 on a Mac running OS X or macOS. It will not work with Excel 2008 since that version of Excel did not support add-ins. It will not run with Excel 2016; however, there is a version of MegaStat for Mac Excel 2016.

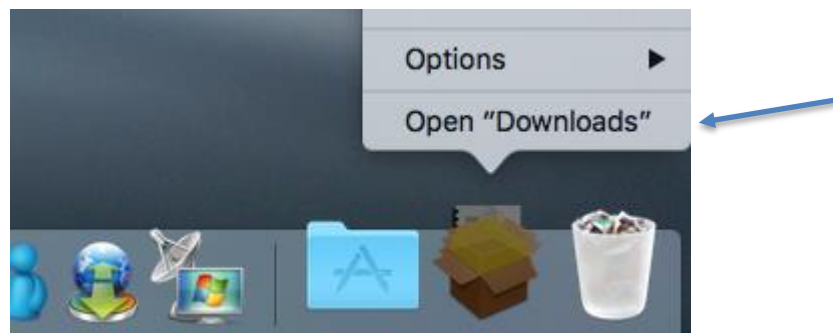

After the installation and initial setup, MegaStat will appear on Excel's main menu bar as shown below:

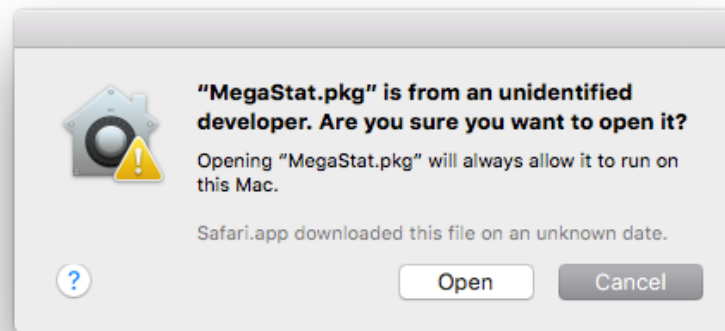

MegaStat for the Mac has all of the features of the Windows version and works the same way. The design and appearance of some of the dialog boxes will be slightly different from the Windows version, but the functionality is the same and you can use the MegaStat User's Guide.

## MegaStat installation

- Download the installation program (MegaStatInstallerMac2011.pkg). You will need Administrator privileges to do the installation.
- Open the Downloads folder in Finder by **control-clicking** (or right-clicking) the **Downloads icon** in the dock and clicking 'Open Downloads'. (Or you can just open Finder from the dock.)

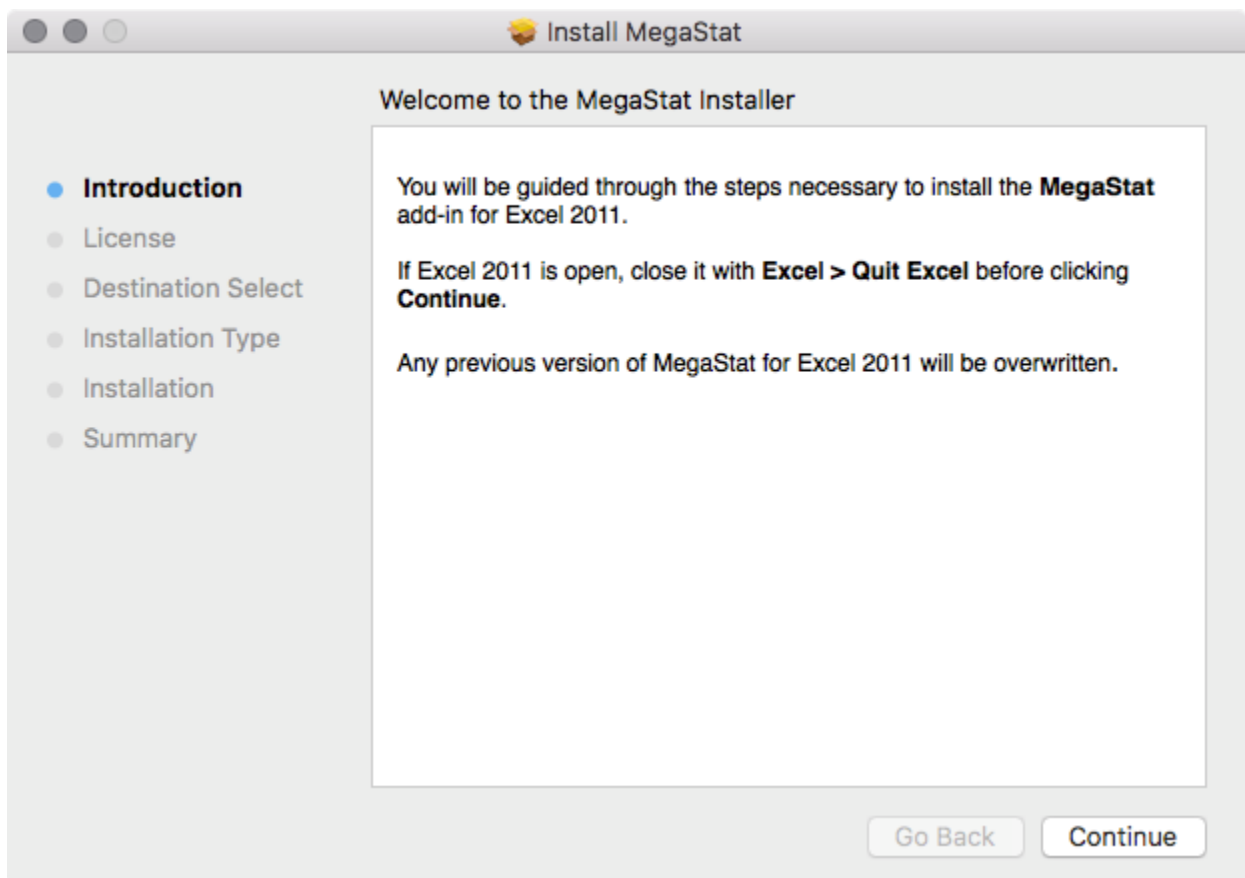

- In the Downloads folder, **control-click** or right-click MegaStatInstallerMac2011.pkg, click **Open**, and you will see the following:

(This message is because MegaStat is not coming directly from the Mac App Store. If you have System Preferences > Security & Privacy set to allow downloads from anywhere, this procedure is not necessary and you will not see the above message.)

1. Click '**Open**' to start the installer program and you will see the following screen:

Note what it says about making sure Excel 2011 is not open. The reason Excel needs to be closed is because Excel only checks for new add-ins when it is opened.

2. Click **Continue** to view the License Agreement. There are option buttons to print or save the file.

3. Click **Continue** and click **Agree** to accept the License Agreement.
4. Click **Install** to start the installation.
5. Enter your password and click **Install Software**.

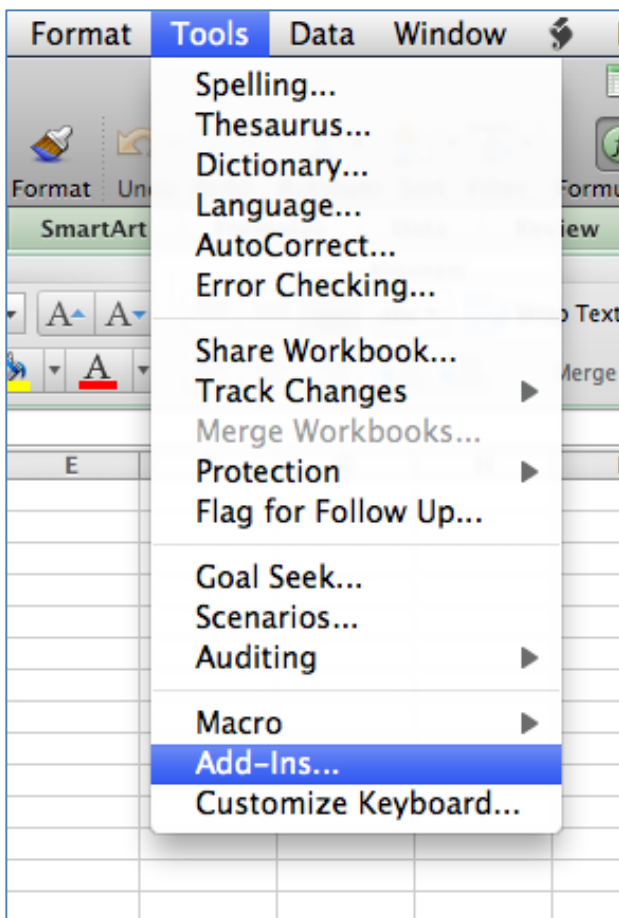

You will then see the summary screen with instructions on how to place MegaStat on the Excel menu. Those instructions are shown below.

6. Click **Close** to exit the installer program; however, you can leave the summary window open until you are done with the Excel steps.

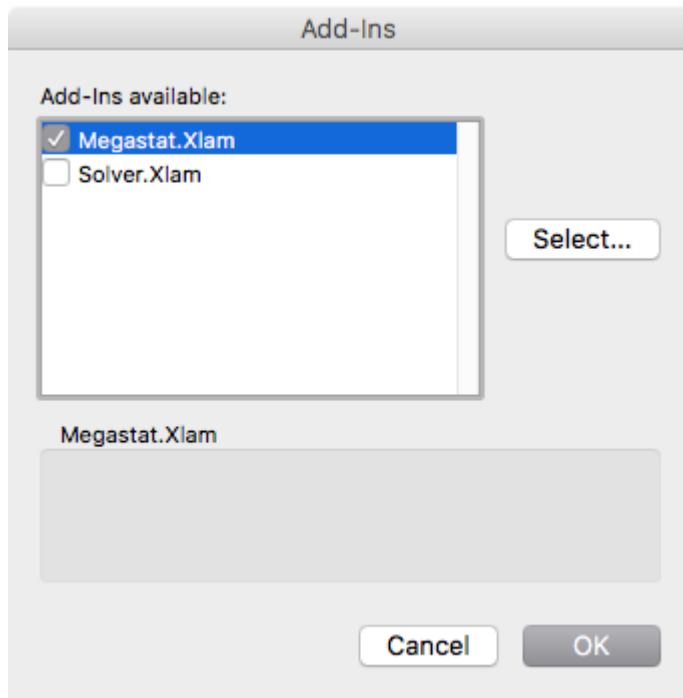

## MegaStat setup

After running the installation program, you need to do a few steps in Excel to place MegaStat on Excel's main menu:

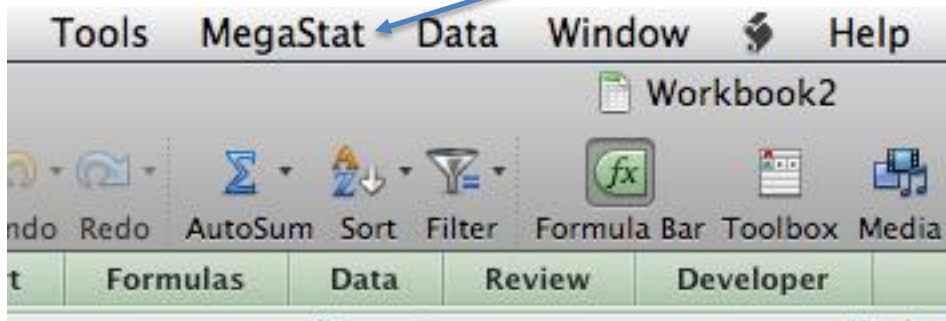

- **Open Excel > File > New Workbook** (or open an existing Excel workbook). If workbook is not open, the Add-Ins item on the menu will not be active.
- Click **Tools > Add-Ins...**

You will then see the Add-Ins list. The list may be different on your computer but we are only interested in looking for MegaStat.

- Make sure **Megastat.Xlam** is checked and click **OK**. MegaStat will then be on the main Excel menu whenever you open Excel.

- Click **Close** to exit the installer.

If you do not see MegaStat.xlam in the Add-ins list, click Select and look in the Add-ins folder: Applications : Microsoft Office 2011 : Office : Add-Ins.

If you want to remove MegaStat from the Excel menu, go to Tools > Add-Ins... and uncheck MegaStat.

If you want to uninstall MegaStat from your computer, delete MegaStat.xlam and the help folder (MegaStat\_Help) from the Add-ins folder: Applications : Microsoft Office 2011 : Office : Add-Ins.
